limb is supplied).

distributed to the muscles of the fore-part of the

abdomen, a subscapular branch, a circumflex artery

supplying the muscles of the shoulder, and is then

continued to the fore-arm, where it becomes 'radial,'

wrist into a dorso-carpal and palmar-branch, which

terminates in the digital arteries and the interven-

One important benefit was conferred on craniology by Professor Retzius in the proposal of terms, since almost universally adopted, by which certain of the more strongly marked of the varieties of crania, I have before adverted to, are commonly designated. It is to him that we owe the terms *brachycephalic* and *dolichocephalic*, with their respective modifications of *orthognathic* and *prognathic*, and under which, in a certain sense, all the forms of human crania may be classified.—G. Busk, *On a Systematic Mode of Craniometry*.

Brachylogy. s. [Gr. *βραχύς* = short, *λόγος* = word, term, expression.] Conciseness of expression.

This, so far as consistent with perspicuity, is a virtue and beauty of style; but if obscurity be the consequence, which is often the case, it becomes a blemish and inexcusable defect. in the schools, and if they find in theirs many *bracks*

Operations and Nature of Man's Soul, dedication.

Alexander marched against another town, which the Greeks describe as if it was inhabited by *Brahmins* only; and these are mentioned as a different race from the Malli who fled to them for shelter. We cannot rely on the accuracy of these statements; but it is certain that in this western border-land of India the distinction of castes has never been rigidly observed, and it is possible that, here and elsewhere, a whole community of *Brahmins* may have preserved the purity of their blood, while they engaged in all the necessary occupations which in theory properly belonged to the lower castes. These *Brahmins* were stout warriors, and offered the most determined resistance that Alexander had hitherto encountered in this campaign.—*Thirlwall, History of Greece, ch. liv.*

2. Person of high caste and exclusive position.

Hitherto the Duke of St. James had been a very celebrated personage; but his fame had been confined to the two thousand *brahmíns* who constitute the world. Glitter like a swarm of fire-flies tangled in a silver braid.

And oftentimes such *braides* come upon them against their will.—*Ibid. sign. B. 3.*

Braid. s. [see Braid, *adj.*] Start. *Obsolete.*

O, what a ruthless, steadfast eye, methought,
He fix'd upon my face, which to my death!
Will never part from me! when with a *braid*,
A deep-fet sigh he gave, and therewithal
Clasping his hands, to heaven he cast his sight.

Braid. v. n. [see next entry.] Resemble; start: (with *of* or *after*).

(For examples see extract from Wedgwood under next entry.)

Braid. ? adj. See remarks. *Obsolete.*

My mother told me just how he would woo,
As if she sat in his heart: . . .

He had sworn to marry me,
When his wife's dead; therefore I'll live with him,
When I am buried. Since Frenchmen are so *braid*
Marry that will, I'll live and die a maid:
Only, in this disguise, I think 't no sin
To cozen him, that would unjustly win.
Shakespeare, All's well that ends well, iv. 2.

[Of this difficult word this is the most difficult instance. Stevens, who knew that one of the meanings of the substantive was a *sudden start*, or *hasty motion*, also knew that the Anglo-Saxon suggested another, viz. *craft, wile, trick*. This latter he preferred. His reference, however, to the Anglo-Saxon by no means verifies his interpretation. He writes as if *brede*, as an *adjective*, were a current and recognized Anglo-Saxon word; which is scarcely the case. Bosworth gives us no instance of it. What he gives are the following *substantives* and *verbs*: *butan brade* = without fraud; *gebræde he hine seocne* = he feigned himself sick; and he enters (but without examples) the participial form *bredende* = deceiving or deceitful.

The word, then, as an *adjective*, is one which we must not take on trust; inasmuch as, though not an impossible form, it is not one of the likeliest. The ordinary adjectives to such substantives as the Anglo-Saxon *bræd* and the English *braid* are *bradig* and *braidy* respectively; and, until these are found, the commentator who makes *braid* an adjective is in the same predicament as one who would identify *wile*, *craft*, *trick*, or *haste*, with *wily*, *crafty*, *tricky*, or *hasty*.

Even, however, when the adjectival form is accounted for, the import of its corresponding substantive has to be considered. The extract given by Stevens, the one which is generally quoted to show that *braid* = *wile* or *trick*, is

'Dian rose with all her maids,
Blushing thus at Love his *braids*.'
R. Greene, Never too late.

But it is clear that the sense may also be *springs, attacks, hasty movements*; whilst in Wright and Halliwell's *Archaic and Provincial Dictionary* a third possible import (*reproaches* = *up-braid-ings*) is suggested. The meaning, however, of the substantive is of less importance than the non-adjectival character of the form. If we can make *braid* an adjective, and read it as if it were *brady*, it matters little whether the substantive means *wile* or *haste* or *caprice*; since it is just as easy for an individual to be *hasty* as it is for him to be *wily* or *capricious*; and vice versa.

In different ways, Horne Tooke as an early, and Mr. Wedgwood as a late, writer, connect the word with *bray*; a connection which makes it a participial adjective, and also explains the form. It is doubtful, however, whether the meaning is proportionably clear. Horne Tooke says that it means simply *brayed as in a mortar*; and that the sense is, 'if Frenchmen are so, even when brayed as in a mortar (? to cleanse or purify them), I will remain,' &c. An interpretation which few are likely to adopt.

Mr. Wedgwood's reasoning is as follows:—

'Many kinds of loud harsh noise are represented by the syllable *bra*, *bru*, with or without a final *d*, *g*, *h*, *ch*, *y*. Fr. *braire*, to bray like an ass, bawl, yell, or cry out loudly; *bruire*, to rumble, rustle, crash, to sound very loud and very harshly; *bruyier* to bellow, yell, roar, and make a hideous noise. . . . With a terminal *d* we have Prov. *braydr*, *braydr*, to cry; Port. *bradar*, to cry out, to bawl, to roar as the sea. OE. to *bruid*, *abraid*, *upbruid*, to cry out, make a disturbance, to scold.

* "Whereat he (Henry IV. on being told that his son had been committed by Gascoigne) a while studying, after as a may all ravished with gladness *abrayed* with a loud voice." (Elyot in Boucher.)

"Then as things done on a sudden or with violence are accompanied by noise, we find the verb to *bray* or *braid* used to express any kind of sudden or violent action, to rush, to start, to snatch.

"And thai (the winds) thereat having full great disdain

about their clousours *brays* with many ane rare." (Gawain Douglas, Virgil.)

Translation of — "Magno cum murmure Circum claustra fremunt."

"But when I did as out of sleep *abray*." (Spenser, Faerie Queen.)

"The miller is a perious man he seide And if that he out of his slepe *abreide* He might don us both a villany." (Chaucer.)

"The Icel. *bragd* is explained *motus quilibet celerior*; at *braggi*, instantaneously, at once, as Old English, at a *braid*."

"Icel. *augnabragd*, a wink, twinkling of the eye. Then, as the notion of turning is often connected with swiftness of motion, to *braid* acquires the sense of bend, turn, twist, plait.

"Icel. *bregda*, to braid the hair, weave nets, &c. The Icelandic *bragd* is also applied to the gestures by which an individual is characterised, and hence also to the lineaments of his countenance, explaining a very obscure application of the English *braid*. *Bread*, appearance—Bailey; to *braid*, to pretend, to resemble—Halliwell. To pretend to assume the appearance and manners of another. "Ye *braid* of the miller's dog," you have the manners of the miller's dog. To *braid* of one's father, to have the lineaments of one's father, to resemble him. Icel. *bragr*, gestus, mos; at *braga eftir einum*, to imitate or resemble one.

"On the same principle may be explained a passage of Shakespear, which has given much trouble to commentators.

"Since Frenchmen are so *braid*, Marry who will, I'll live and die a maid."

"The meaning is simply, "since such are the manners of Frenchmen," &c."

The association of some of the conceptions here exhibited is natural; e.g. *sudden noise*, *a start*, *a twist* (whence *plait*), *a turn* (whence *gesture*, *lineament*, &c.) afford an intelligible sequence. More than this, however, is needed for a satisfactory derivation.

The meaning assigned in the foregoing extract to the word in Shakespear, though it may explain *braid*, scarcely gives to so its true import. So is, apparently, an adverb expressive not so much of resemblance as of degree; and, as such, one which would be translated into Latin by *adeo*, rather than by *ita*, *sic*, or *ad hunc modum*. Instead of *braid*, write *mannered*, simply meaning *with manners*; and the adverb we prefix is *thus* rather than *so*: because in *manners* in general the question of degree has no prominence; neither is there any definite comparison made with something else. It is only when we are referring manners to some standard of comparison, or measuring the amount of some quality by which they are characterized, that *so*, in accurate writing, finds place. We say *so well bred* or *so ill bred* twenty times, where we say *so bred* once.

Still, the etymological connection of *braid* with *bray* seems real; it being, etymologically, the connection of *staid* (= steady) with *stay*. The sense is less clear. It may mean *wily*, *capricious*, or *hasty*; but it may also mean anything that can be deduced from any signification of a word of very wide and loose import; and this the series of notions connected with the word *turn* has shown the term in question to be. Which of such real or possible meanings best suits the context is a matter for the special Shakespearian critic, rather than for the lexicographer, who, in the present case, with *meanings* in excess to choose from, has only to consider the *form* of the word, and the construction required for the grammar

of the sentence in which it occurs. From this view he can only regard it as a *participle* or *participial adjective* from *Bray*, in which the notion of quick motion is sufficiently clear to allow of its being contrasted with *Stay*; though the details of such an opposition are obscure.

Etymologically and grammatically, this is the only form he can recognize.

Of *braid* being an adjective in which the final *d* is radical, as in *mad*, &c., there is no evidence; whilst a derivative adjective without the derivational termination *y* or *ig*, is as unlikely as such an adjective as *wile* or *haste* = *wily* or *hasty*.

A participle, too, in which the two *d*'s have become fused into one (*braided*, *braid'd*, *braid*) is equally unlikely. Where we do not say *bended*, we say *bent*, not *bend*. In short, *bray* is the only word which will give what is required, viz. a participle or participial adjective in *d*. At any rate, commentators should fix their attention on the right point, which is not so much the question as to the import of the radical part of the word, as the explanation of an adjective with a substantival form.]

[From French *braies*, breeches, drawers, was formed *brayele*, *brayete*, the bridge or part of the breeches joining the two legs. A slight modification of this was *brayuel*, the feathers about the hawk's fundament, called by our falconers the *brayle* in a short-winged, and the pannel in a long-winged hawk.—Cotgrave. From *brayel*, or from *braie* itself, is also derived French *desbrailleur*, to unbrace or let down the breeches. . . . Hence English *brails*, the thongs of leather by which the pen-feathers of a hawk's wing were tied up; to *brail* up a sail, to tie it up like the wing of a hawk, to prevent its catching the wind.—Wedgwood, Dictionary of English Etymology.]

Brain. *s.* [A.S. *brægen*.] As this is one of the earliest words in a large class, it may serve as a text for some remarks; the nature of which was foreshadowed in the reference under *Braid*, *v. a.*

As a general rule, all words of immediate Anglo-Saxon origin in which *a* is followed by *i*, and pronounced as the *a* in *fate*, were, in an earlier stage, most probably diphthongal in sound as well as in spelling, the *a* being pronounced as in *father*, and the *i* as *y*. Such, indeed, is the present provincial pronunciation in many districts, where the combination is sounded in a drawing manner, as *bräh-in* or *bra'in*. This is

really the sound of the *i* in *wine*, and the *igh* in *night*; i.e. of what we call in English the long *i*, but which is, in reality, a diphthong. In German this is shown more clearly; the *ei* being generally used to represent the same sound as our long *i*. In a few words the *ai* is employed; viz. in *waitzen* = wheat, and in *Baiern* = Bavaria; pronounced *Beiern* and *weitzen*; i.e. as *Biern* and *witzen*, in English.

Earlier still this *y* was a *g*, so that words like *brain*, *rain*, *tail*, *sail*, and their congeners, were dissyllables, i.e. *brægen*, *regen*, *tagel*, *segel*, &c. This original softening and final elimination of the *g* between two vowels, is a very common phenomenon in the languages akin to our own. In the Danish (at least of Copenhagen), though it stands in print, it is almost always elided in speech; and that between any two vowels: so that *segel* is pronounced *seil*; *duger*, *duer*, &c.

The chief peculiarity, however, of the Anglo-Saxon is that the first sound was represented by an *a*; whereas in the allied languages it was represented by an *e*. This, in all probability, was a point of spelling only; the Anglo-Saxons using *a*, where others used *e* with the German, Danish, and French power. And even this was, probably, an apparent, rather than a real, peculiarity. In the first place, the Anglo-Saxon spelling was generally with *æ*, the diphthong rather than the simple vowel: in the second, there were probably two sounds; one corresponding with the open (*ouvert*), the other with the close (*fermé*), of the French.

At any rate, it is safe to assume that the combination *ai*, in words straight from the Anglo-Saxon, has grown directly out of the diphthong, and indirectly out of the sound of *a + g* followed by a vowel. Hence the root of words like *brain*, *rain*, &c., is generally dissyllabic, with the first syllable ending in *g*; a *g* which must always be borne in mind when we deal in any question of comparative philology.

This rule applies even to words which came into the Anglo-Saxon from the Latin, e.g. *flail* from *flagellum*, and others; the same being the case in Danish; where *spegel*, from *speculum*, is pronounced *speil*.

In some of the Continental reprints of Anglo-Saxon works, this *æ* is written *ä*, when the sound is believed to be open, i.e. the French *e ouvert*; though without sufficient warrant from MSS.]

Braize. *s.* [*Lat. pagrus.*] Fish so called (*Sparus Pagrus*).

There is considerable similarity in outward form between the true pagrus and the chrysophrys; but the colour of the braize and the circumstance of its possessing but two molar teeth are sufficient to distinguish it. Dryden, Fables.

From thy own smile I snatched the snake; For there it coiled as in a brake.

Byron, Manfred, i. 1.

[The meanings of brake are very numerous, and the derivation is entangled with influences from different sources. A brake is: 1. A bit for horses; a wooden frame to which the feet of vicious horses are confined in shoeing; an old instrument of torture; an inclosure for cattle; a carriage for breaking in horses; an instrument for checking the motion of a wheel; a mortar; a baker's kneading trough; an instrument for dressing flax or hemp; a harrow. (*Halliwel*). 2. A bushy spot, a bottom overgrown with thick tangled brushwood. 3. The plant fern. The meanings included under the first head are all reducible to the notion of constraining, confining, compressing, subduing. . . . In the foregoing examples brake is used almost exactly in the sense of the Latin *subigere*, expressing any kind of action by which something is subjected to external force, brought under control, reduced to a condition in which it is serviceable to our wants, or the instrument by which the action is exerted.

Icelandic *braka*, *subigere*, to subdue. In this sense must be explained the expression of *breaking* in horses, properly *braking* or subduing them. To the same head must be referred *brake*, a horse's bit, Italian *braca*, a horse's twitch. A.S. *bracan*, to pound, to knead or mix up in a mortar, to rub, farinam in mortario *subigere*. . . . The French *broyer* is also used for the dressing of flax or hemp, passing it through a brake or frame consisting of boards loosely locking into each other, by means of which the fibre is stripped from the stalk or core, and brought into a serviceable condition. As there is so much of actual breaking in the operation, it is not surprising that the word has here, as in the case of horse-breaking, been confounded with the verb *break*, to fracture. We have thus Dutch *bracken* het vlasch, frangere lnum (*Biglotton*). . . . It is remarkable that the term for *breaking* flax in Lithuanic is *brakiti*, signifying to sweep, to brush, to strip. The Icelandic *brak* is a frame in which skins are worked backwards and forwards through a small opening, for the purpose of incorporating them with the grease employed as a dressing. . . .

In the case of the English Brake, Gaelic *braca*, a harrow, Danish *brage*, to harrow (*Lat. glebas subigere, segetes subigere aratris*), the notion of breaking down the clods again comes to perplex our derivation.

In other cases the idea of straining or exerting force is more distinctly preserved. Thus the term brake was applied to the handle of a cross-bow, the lever by which the string was drawn up, as in Spanish *bregar el arco*, to bend a bow, French *braquer un canon*, to bend or direct a canon. The same name is given to the handle of a ship's pump, the member by which the force of the machine is exerted.—*Wedgwood, Dictionary of English Etymology*.]

Brake. *s.* [see preceding extract.] Sharp bit or snaffle for horses; machine in which horses unwilling to be shod are confined during that operation; restraint.

Brake is used of a farmer's instrument otherwise called barnacles. The word also occurs for a baker's treading-trough. Brake. *s.* Same as Bracken.

Others [leaves] are parted small, like our fern or brakes.—*Terry, Voyage*, p. 105.

[The power of the -en in Bracken is uncertain. It has been treated (1) as the sign of the feminine gender, i.e. as the -en in Vixen, or the German -inn; (2) as the -en in oxen, i.e. as a sign of the plural number; and (3) as the Celtic sign of the singular number in opposition to the collective form, e.g. Breton, brech = fern in general, brechyn = a single plant. As we say bracks, bracken, and brackens indifferently, it is clear that the termination, at present, has no definite import.]

Braky. *adj.* After the manner of a brake; thorny; prickly; rough.

Bramble. *s.* [*A.S. bremel, bremel*.—the b is inorganic, i.e. no part of the word, but an insertion, on phonetic principles, between the m and l, which, from the light sound given to the e, are brought into contact; the sound of the word having been *bremel*, rather than *brem-el*, or *bre-mel*.]

Tennyson, A Dirge.

That the word originally had a wider import may be seen from the following extract.

[The word *bramble* itself was applied in a much wider sense than it is at present to any thorny growth, as A.S. *brembel-appel*, the thorn apple or stramonium, a plant bearing a fruit covered with spiky thorns, and in Chaucer it is used of the rose.

The payment of tythes is subject to many frauds, brangles, and other difficulties.—*Swift*.

[This word has two senses, apparently very distinct from each other, though it is not always easy to draw an undoubted line between them. 1st, to scold, to quarrel, to bicker; and 2nd, as French *brandiller*, to brandle or brandish. The Italian *brandolare* is explained by Florio, to brangle, to shake, to shog, to totter.

'The tree brangillis, bolsting to the fall, With top trimbling, and branchis shakand all.' (G. Douglas, Virgil, in Jamieson.)

In this application the word seems direct from the French *brangler*, the spelling with *ng* (instead of the *nd* in *brandile*) being an attempt to represent the nasal sound of the French *ng*. In the same way the Fr. *bransle*, a round dance, became *brangle* or *brawl* in English; Italian *bravola* a French brawl or bransle. (Florio.) From the sense of shaking probably arose that of throwing into disorder, putting to confusion.

'Thus was this usurper's faction brangled, then bound up again, and afterward divided again by want of worth in Baidol their head.' (Hume in Jamieson.)

To embangle, to confuse, perplex, confound.—*Wedgwood, Dictionary of English Etymology*.]

It is commonly supposed that the wood yielding the red dye, *Cæsalpinia Brasilletto*, derived its common name of *Brazil-wood* from its being principally imported from, and produced in, Brazil. This, however, is not the fact. It has been shown that woods yielding a red dye were called *Brazil-woods* long previously to the discovery of America; and that the early voyagers gave the name of Brazil to the part of that continent to which it is still applied, from their having ascertained that it abounded in such woods.—*Bancroft, Philosophy of Colours*, quoted in *McCulloch's Geographical Dictionary*.

Break-down. s. (Frequently pronounced *break-down*, i.e. as a compound rather than as two words.

Break-up, however, is perhaps, as generally sounded as two words; i.e. as *break up*, or *break-up*. Such, however, is not the case; inasmuch as in the compound the contrast disappears, and *break-up* and *break-down* mean nearly the same. breathing; and as such it is treated when by that

word we translate the Latin terms spiritus and aspi-

ratio; though, at the same time, we may talk of *breath-*

breathing, or one which is contrasted with the aspi-

rate. That the complications thus engendered would

be avoided by recognizing the distinction between the

aspiration as the name of the simple *breathing* and the

has been suggested by Key, and that rightly. We

should gain much by adopting the distinction.—*Dr.*

R. G. Latham, Elements of Comparative Philology.

spectively originated from single stocks, and that
their peculiarities have been engendered, as it were,
upon their specific characters. . . . That these do-
mesticated races, however different their external
characters, have a common origin, is indicated by
the perfect freedom with which they breed together;
and by the fact that, whenever they return to a state
of nature, the differences of breed disappear. . . .
Wright determined on breeding from this ram, and
the first year obtained only two with the same pecu-
liarities.—*Dr. Carpenter, Principles of Comparative*
Physiology, § 619.

In contempt.

A cousin of his last wife's was proposed; but John
would have no more of the breed.—*Arbutnot, His-*

are hatched; sometimes above an hundred at a
breed.—*Grew*.

Breëbate. s. One who breeds quarrels.
An honest, willing, kind fellow, as ever servant
shall come in house withal; and, I warrant you, no
telltale, nor no breëbate.—*Shakespeare, Merry Wives*
of Windsor, i. 4.

Breëder. s.

1. One who, or that which, produces any-
thing; one who brings up another.

Time is the nurse and breëder of all good.
Shakespeare, Two Gentlemen of Verona, iii. 1.
Time was when Italy and Rome have been the best
breëders and bringers up of the worthiest men.—
Ascham, Schoolmaster.

2. Female who is prolific.

Get thee to a nunnery; why would'st thou be a
breëder of sinners?—*Shakespeare, Hamlet*, iii. 1.
Here is the babe, as loathsome as a toad,
Amongst the fairest breëders of our time.

Id., Titus Andronicus, iv. 2.
Let there be an hundred persons in London, as
many in the country, we say, that if there be sixty
of them breëders in London, there are more than
sixty in the country.—*Graunt*.

Yet if a friend a night or two should need her,
He'd recommend her as a special breëder. *Pope*.

dairy, or else kept their cattle to six or seven years
old.—*Sir W. Temple*.

fant state; education; instruction; quali-
fications.

I hope to see it a piece of none of the meanest
breëding, to be acquainted with the laws of nature.

—*Glanville, Scæpsis Scientifica*, preface.
Why was my breeding order'd and prescrib'd,
As of a person separate to God,
Design'd for great exploits?

Milton, Samson Agonistæ, 30.
In our municipality, the public, for the public is
now admitted too, may behold an energetic Danton;
further an epigrammatic slow-sure Manuel; a reso-
lute unrepentant Billaud-Varennes, of Jesuit breed-
ing; Tallien able-editor; and nothing but Patriots,
better or worse.—*Carlyle, French Revolution*, pt. ii.
b. v. ch. vii.

Breëding, and wit, and air, and decent pride. *Swift*.
Blindness, the most cruel misfortune that can
befall the lonely student, made his books useless to
him [Congreve]. He was thrown on society for all
his amusement; and in society his good breeding
and vivacity made him always welcome.—*Macaulay,*
Essays, Comic Dramatists of the Restoration.

A-breëding. [on breeding.] State of preg-
nancy.

She had three poor small children, who were not
capable to get their own living; and if her husband
was sent to gaol, they must all come to the parish;
for she was a poor weak woman, continually a breë-
ing, and had no time to work for them.—*Fielding,*
Adventures of Joseph Andrews.

Breëding. s. See extract.

In that dreary region, covered by vast flights of wild
fowl, a half-savage population, known by the name
of Breëdlings, then led an amphibious life.—*Mac-*
aulay, History of England, ch. xi.

Breeze (also Brize, Breese, and Bréezefy).
s. [A.S. *briosa*; German, *bremse*.—Though
not a common word in the literary English
of the present time, it is freely used in
speech. Whether it may not be provincial,
rather than generally used throughout the
country, is uncertain. It is current over
a large part of England; and I am unable
to say where it is not found. The pronun-
ciation is chiefly, if not universally, breeze,
though brize is the commoner form in the
older extracts. The example from Hud-
ibras, the only one which gives it as a rhyme,
favours the sound with *ee*.] Stinging-fly;
gadfly.

A brize, a scorned little creature,
Through his fair hide his angry sting did threaten.
Spenser, Visions of the World's Vanity.
Cleopatra.

The brize upon her, like a cow in June,
Hoists sail, and flies.
Shakespeare, Antony and Cleopatra, iii. 8.

I can hold no longer;
This brize has prick'd my patience.
B. Jonson, Poetaster, iii. 1.
The learned write, the insect breeze
Is but the mongrel prince of bees.

Butler, Hudibras.
A fierce loud buzzing breeze, their stings draw
blood,
And drive the cattle gadding through the wood.
Dryden.

Breeze. s. [Fr. *débris*.] See extract.

[The ashes and cinders sold by the London dustmen for
brickmaking are known by the name of breeze. In
other parts of England the term *briss* or *brist* is in
use for dust, rubbish. *Briss* and *buttons*, sheep's
droppings; *bruss*, the dry spines of furze broken off,
(Devonshire Glossary.) Piedmontese, *brossa*, or *orta*,
the offal of hay and straw in feeding cattle; Spanish,
broza, remains of leaves, bark of trees and other
rubbish; French, *bris*, *débris*, rubbish; *bris de char-*
bon, coal-dust; *bresilles*, *bretilles*, little bits of wood
(Berri); *briser*, to break, burst, crush, bruise: Bre-
ton, *bruzun*, a crum, morsel; German, *brosams*, a
crum; Dutch, *brjzen*, *brjsele*, to bray, to crush;
Gaelic, *bris*, *brisd*, *brist*, to break; Danish, *briste*, to
burst, break, fall.—*Wedgwood, Dictionary of Eng-*
lish Etymology.]

Breeze. s. [Fr. *brise* = term in Provence
for a fresh wind which blows upon that coast
from nine in the morning till the evening.]

1. Gentle gale; soft wind.

We find that these hottest regions of the world,
seated under the equinoctial line, or near it, are so
refreshed with a daily gale of easterly wind, which
the Spaniards call breeze, that doth ever more blow
stronger in the heat of the day.—*Sir W. Raleigh*.
From land a gentle breeze arose by night,
Serenely shone the stars, the moon was bright,
And the sea trembled with her silver light.

Dryden.

Gradual sinks the breeze
Into a perfect calm; that not a breath
Is heard to quiver through the closing wood.

Thomson.

2. Chiding; wrangle.

The marine went forward and gave the order; and
Jemmy, who expected a breeze, told his wife to be-
have herself quietly. His advice did not, however,
appear to be listened to, as will be shown in the
sequel. 'How came you on board, woman?' cried
Vanslyperken. 'How did I come on board! why in
a boat to be sure,' replied Moggy, determined to
have a breeze.—*Marryat, Snarleygown*, vol. i. ch. xv.

Breezeless. adj. Without a breeze.

Yet here no fiery ray inflames
The breezeless sky. *W. Richardson, Poems*.
A stagnate breezeless air becalms my soul.
Shenstone, Poems.

Breezy. adj. Fanned with gales; full of
gales; fresh.

The seer, while zephyrs curl the swelling deep,
Basks on the breezy shore, in grateful sleep,
His oozy limbs. *Pope, Homer's Odyssey*.
The breezy call of incense-breathing morn.

Gray, Elegy.

But, Alice, what an hour was that,
When after roving in the woods
('Twas April then), I came and sat
Below the chestnuts, when their buds
Were glistening to the breezy blue.

Tennyson, The Miller's Daughter.
What a master of composition Fielding is! Upon
my word, I think the *Edipus Tyrannus*, the Al-
chemist, and Tom Jones the three most perfect
plots ever planned. And how charming, how whole-
some, Fielding always is! To take him up after
Richardson, is like emerging from a sick-room
heated by stoves, into an open lawn, on a breezy
day in May.—*Coleridge, Table Talk*.

Bréhon. s. (used also adjectively, as 'brehon
law'.) [Irish.] Judge among the ancient
Irish.

In the case of murder the *bréhon*, that is, their
judge, will compound between the murderer and
friends of the party murdered, which prosecute the
action, that the malefactor shall give unto them, or
to the child or wife of him that is slain, a recom-
pense, which they call an *erinch*.—*Spenser, View of*
the State of Ireland.

Breme. adj. [A.S. *bremman* = be in excess.]
Excessive; sharp; severe. *Obsolete*.

Thisles thicke,
And breris brimme for to prickè.

Chaucer, Romaunt of the Rose.

And when the shining sun laugheth once,
You deem the spring come at once:
But oft, when you count you freed from fear,
Comes the breme winter, with chafmired brows,
Full of wrinkles, and frosty furrows.

Spenser, Shepherd's Calendar.

Breme. v. n. Teem; bring forth: (chiefly
applied to swine). *Rare*.

Why do tame sows farrow often, some at one time
and others at another; and the wild but once a year,
and all of them about the same time? Is it because

through plentiful feeding tame sows *breme* oftener?
—*Translation of Plutarch's Morals*, vol. iii. p. 468.

Bren. v. a. [A.S. *brennan*.] Burn. *Obsolete*.
Closely the wicked flame his bowels *brent*.

Spenser, Faerie Queen, iii. 7. 16.
What flames, quoth he, when I thee present see
In danger rather to be *brent* than drent? *Id.*

Brenning. part. gđj. Burning. *Obsolete*.

Her swete reporte so my hert set on fyre
Wyth *brenning* love moost hot and fervent,
That her to se I had greute desyre.

Hawes, Pastime of Pleasure, ch. ii.:
ed. 1555. (Percy Soc.)

Brent. adj. [?] Steep; high. *Obsolete*.

The grapes grow on the *brent* rocks so wonder-
fully, that ye will marvel how men dare to climb up
to them.—*Ascham, Letter to Roven*

Brent-geese. s. [Ger. *halber ente* = half duck.
Two words rather than a compound.—The
extract from Wedgwood under Auburn
is the complement to the remarks forth-
coming. Drake and Skeldrake also
bear upon it.

The excuse for the length of the present
notice is twofold. It partly lies in the fact
of the derivation being, to some extent,
hypothetical; and partly in the fact of its
being, if true, one of what may be called
the curiosities of etymology.

For the illustrative extracts, those parts
have been selected from the account of
Yarrell which more especially bear upon
the proposed etymology.

As applied to the Brent-geese, the ex-
planation of the term goes upon the doctrine
that it is as much a duck as a goose; still
that it is a *goose* which partakes of the
nature of a duck, rather than a *duck* which
partakes of the nature of a goose. The
Brent is certainly treated by zoologists, by
poulterers, and by ornithologists, as a *goose*.

By many of such naturalists as classify by
type rather than definition, the type of the
duck kind (the word *kind* being used in the
technical sense suggested by Mr. Mill and
allowed by Dr. Whewell), the standard or
typical duck, is not the domestic bird so
called, but the shoveller. Again, the genus
Anas = duck is a wide one. Wider still the
family *Anatidæ*. This comprises (1) the
geese, (2) the swans, (3) the true ducks, and
(4) the mergansers or smews. All, except
the last, have been by the earliest ornitho-
logists treated as *Anates*: the grey-legged
or gray-lag goose, the probable original of
the domestic fowl, being the preeminent
goose, the *Anas Anser*. This gives us a
type in the opposite direction to that sup-
plied by the shoveller.

The bird in question is named by Pen-
nant, Montague, and Bewick, *Anas Berni-
cla* (which it is not) or Brent-geese; by
Fleming, Selby, and Gould (previously to
the publication of Yarrell's work), *Anas
torquatus*. Temminck makes it both the
Anas Bernicla and the *Anser Bernicla*. So
much for the zoological view of its affinities
as determined by the nomenclature.

The Skeldrake (also called sheldrake
and shieldrake), in like manner, being a
bird in a similar osculating relation with
the true ducks (though in another direc-
tion), is popularly called in some districts
the burrowing *duck*, in others the burrow-
ing *gander*. It makes its nest in rabbit-
holes; in the capacity of *duck* or *goose*, as
the case may be.

I now give the extracts which bear upon
the same view; i.e. that of the Brent's in-
termediate anatine and anserine character.

Of the various species of geese which visit the
British islands this [the *Brent goose*] is the smallest
... It is a regular winter visitor to the shores of

BRET

most of our maritime counties, and remains with
us through all the cold months of the year. It is
seldom seen on fresh water, unless wounded, but is
a truly marine species. The *Brent goose* is found
during summer at the Faroe Islands, and at Ice-
land. Captain Scoresby, in his account of the
Arctic regions, reports that the *Brent goose* occurs
in considerable numbers near the coast of Green-
land; but is not seen in any quantity at Spitzber-
gen. (Yarrell, *British Birds*.)

Among the web-footed birds which pass the
season here [in Nova Zembla], the bean geese are
so common, at least in the southern island, that
the collecting their fallen wing-feathers is an object
of profit; according to the assertions of the walrus-
catchers, only one species of goose comes to Nova
Zembla, and we in fact got sight of no other than
the bean goose and the *Brent goose*, which latter
however, does not pass for a goose among the Rus-
sians. (Annals of Natural History, vol. iv.)

In another passage Selby tells us that
in Northumberland the bird is called the
Ware-bird; from the circumstance of
its stomach being generally found full of
ware, or sea-weed. This is noted, because
it is the nearest approach to a true Eng-
lish name; a fact necessary to confirm the
notion that *Brent* is German.

The bird is, as may have been seen, a
bird of passage; and with birds of passage,
especially when they belong to a class
containing others like them, the probability
of the name being foreign is far greater
than it is with birds which pass the whole
year with us.

The chief localities for the Brent-geese
are Danish rather than German; the Feroe
Isles, and the Danish Isles of the Baltic.
Hence, the form ought to be *halb-* rather
than *halb-*. Still, as the German and Dan-
ish languages meet in the Peninsula of
Jutland, this is by no means a serious ob-
jection.

The mixed character of the duck, smew,
and goose is shown in other words; prob-
ably in Goosander = *gōs ente*, and cer-
tainly in Merganser, from *mergus* = smew,
and *anser*.

The word Drake is another similar curi-
osity of etymology. The *d* represents the
t in *anat-is*, the root of *anas*, while the *rk*
is the representative of the form *-rik*, as
in *gānserich* = gander: the full form being
enterich = male duck. See Drake.

I conclude with the remark that once,
and only once, I have heard a Teal called
a *half bird*, i.e. a term which was ex-
plained as meaning half a duck in size.
But it was used by one who was no natu-
ralist; though by one who, living where
teal were simply called *teal*, was in the
habit of occasionally visiting a famous lo-
cality (now so no longer) of the skeldrake.
If the word in this sense be commoner than
I imagine it is, it shows that the teal is, in
one sense, a *Brent* bird. If not, it is in
favour of the skeldrake being one. At
any rate, it is a word which may apply
to any bird which, without being a true
duck, has duck characters.]

Migratory aquatic bird so called, much
smaller than the common wildgoose, but
with longer wings.

(For examples see extracts given above.)

Bret. s. [?] See extract.

I thank you for the account you sent me of the
Bret and *turbut* [sic]. By what you write of the *Bret*,
I perceive that what they call the *Bret* in Lincoln-
shire and Yorkshire, and, I believe, also in all the
east part of England, is the *turbut* of the west
country, where the name *Bret* is not known; and I
believe the halibut of the west is the northern and
eastern *turbut*.—*Ray, Correspondence*.

Bretful. adj. [?] Brimful. *Obsolete*.

A frere on a bench...

With a face so fat, as a full bloddere
Blowen *bretful* of breath. *Langlands*,

Piers Plowman's Crede, sign. B. i. b.
His wallet lay before him in his lappe.
Bretful of pardons come from Rome all hote.

Bréthren. s. [see Brother.] Collective
form of Brother.

All these sects are *brethren* to each other in fac-
tion, ignorance, iniquity, perverseness, pride.—*Swift*.
So far from looking on each other as *brethren* in
the Christian language, they seem scarce to regard
each other as of the same species.—*Fielding, Adven-
tures of Joseph Andrews*.

Against this confederacy Nestorius could array
only the precarious favour of the emperor, the sup-
port of some of his Syrian *brethren*, his archi-
episcopal authority, and the allegiance of some of
his clergy.—*Milman, History of Latin Christianity*,
b. iii. ch. iii.

Meanwhile the potentates who returned the mem-
bers to Parliament—instead of contending among
themselves like their *brethren* in England, and join-
ing opposite parties—were generally disposed to
make terms with the ministers.—*T. Erskine May, Con-
stitutional History of England*, vol. i. ch. vi.

Brevación. s. [? *prefation* = *preface*; ? con-
nected with *brief* = *abridgement*.] Exposi-
tion of details, as in a *brief*. *Obsolete*.

This Godfrey Gobelyve went lightly
Unto dame Sapience, the secretary,
That did him make this supplication,
To the Goddess Venus with *brevacion*.

Hawes, Pastime of Pleasure, ch. xxix.:
ed. 1555. (Percy Soc.)

Breve. s. In Music. Note equivalent in
duration to four minims.

With respect to the first forms of modern nota-
tion, which succeeded points, it is not difficult to
deduce them wholly from the black square note,
called a *breve*, the first and almost only note used in
canto fermo; which, with a foot or tall to it, is a
long, and, if doubled in breadth, a large.—*Rees, Cy-
clopædia*, voc. *Notes*.

Breve. s. [Lat. *breve* = short.] Official writ-
ing; letter of state; writ or brief in com-
mon law; short note or minute in civil law.

The *breve* rather than the bull should have larger
dispensation.—Lord Herbert of Chesham, *History
of Henry VIII.*, p. 227.

Neither the popes themselves, nor those of the
court, the secretaries and dataries, which pen their
bulls and *breves*, have any use or exercise in Holy
Scripture.—Bishop Bedell, *Letters*, p. 356.

Brévet. s. [L. Lat. *brevetum*, from *brevis*,
neuter *breve* = short.] Military commission
conferring rank above that for which pay
is received.

Military officers were still exposed to the marks of
the king's displeasure. In 1773, Lieutenant-Colonel
Barre, and Sir Hugh Williams, both refractory
members of Parliament, were passed over in a *brevet*
or promotion; and Colonel Barre, in order to mark
his sense of the injustice of this act of power, re-
signed his commission in the army.—*T. Erskine
May, Constitutional History of England*, i. 40.

In general the construction is that of
either an *adjective* or the *first element* in a
compound.

Brevet rank does not exist in the royal navy, and
in the army it neither descends lower than that of
captain, nor ascends above that of lieutenant-
colonel.—*Wharton, Law Lexicon*.

What is called *brevet* rank is given to officers of
all branches of the army as a reward for brilliant
and lengthened service; and when such nominal
rank has been held for a certain number of years
it is usually converted into substantial rank.—*A.
Fonblanque, jun., How we are governed*, let. 11.

Bréviary. s. [Fr. *bréviaire*; Lat. *breviary*.]
1. Abridgement; epitome; compendium. *Ob-
solete*.

Some few naked *breviaries* of their wars and
leagues.—Bishop Sprat, *History of the Royal So-
ciety*, p. 43.

Peter Comestor's *Historia Scholastica*, a sort of

- breviary* of the Old and New Testament.—*T. Watson, History of English Poetry*, ii. 108.
2. Book containing the daily service of the church of Rome: (as contradistinguished from the *missal*).

The sermon of the martyrs, which is found among the homilies of St. Augustine and Leo, and in the Roman *breviary*, is appointed to be read at the common festival days of many martyrs.—*Archbishop Usher, Answer to the Jesuit Malone*, p. 333.

If you say they were not saved, then your Roman martyrology, all your missals and *breviaries*, are manifestly false.—*Bishop Barlow, Remains*, p. 460.

Her prayers and thanksgivings [the Church of England's], derived from the ancient *breviaries*, are very generally such that Cardinal Fisher or Cardinal Pole might have heartily joined in them.—*Macaulay, History of England*, ch. i.

- Bréviatē. s.** [L. Lat. *breviatum*, neuter of *breviatus* = anything shortened.] *Rare*.

1. Short compendium. *Obsolete*.

He shall less need the help of *breviatus*, or historical rhapsodies.—*Milton, Animadversions upon a Defence of the Humble Remonstrance*.

It is obvious to the shallowest discusser, that the whole counsel of God, as far as it is incumbent for man to know, is comprised in one *breviate* of evangelical truth.—*Dr. H. More, Decay of Christian Piety*.

2. Lawyer's brief: (apparently in the following extract sounded *brevet*). *Rare*.

First he that led the cavalcade
Wore a sow-gelder's flagellate,
On which he blew as strong a levet,
As well-fee'd lawyer on his *breviate*.

Butler, Hudibras, ii. 2.

- Bréviatē. v. a.** Abbreviate. *Obsolete*.

Though they *breviate* the text, it is he that comments upon it.—*Hewitt, Funeral Sermon*, p. 92: 1653.

- Brevity. s.** [Fr. *brève*; Lat. *brevitas*, -atis = shortness, from *brevis* = short.] Conciseness; shortness; contraction into few words.

Virgil, studying *brevity*, and having the command of his own language, could bring those words into a narrow compass, which a translator cannot render without circumlocutions.—*Dryden*.

We generally omit, for the sake of *brevity*, the intermediate step, and pass at once, in the expression of the argument, from the known, to the unknown individual.—*Whately, Elements of Rhetoric*, pt. i. ch. ii. § 7.

I omit some further provisions to the same effect for the sake of *brevity*.—*Hallam, Constitutional History of England*, ch. iii.

- Brew. v. a.** [Ger. *brauen*; Dutch, *brouwen*.]

1. Make liquors by fermentation; mix.

We have drinks also *brewed* with several herbs, and roots, and spices.—*Bacon*.

Take away these chalcies, *go, brew me a pottle of sack finely*.—*Shakespeare, Merry Wives of Windsor*, iii. 5.

Used *metaphorically*.

Or *brew* fierce tempests on the watery main,
Or o'er the globe distil the kindly rain.

Pope, Rape of the Lock.

2. Contrive; plot.

I found it to be the most malicious and frantick surmise, and the most contrary to his nature, that, I think, had ever been *brewed* from the beginning of the world, howsoever countenanced by a libellous pamphlet of a fugitive physician, even in print.—*Sir H. Wotton*.

- Brew. v. n.**

1. Perform the office of a brewer.

I keep his house, and wash, wring, *brew*, bake, scour, dress meat, and make the beds, and do all myself.—*Shakespeare, Merry Wives of Windsor*, i. 4.

2. Be in preparation; threaten: (the *metaphor* being probably taken from the fermentation of the liquor, rather than from the mere process of the brewer, so that, to the full import, the notion of a sudden burst preceded by a quiet and gradual preparation is necessary).

Here's neither bush nor shrub to bear off any weather at all, and another storm *brewing*.—*Shakespeare, Tempest*, ii. 2.

The shower would quickly fall, that then was *brewing*. *Drayton, Noah's Flood*. (Ord MS.)

I take it for granted, this whole affair will end in smoke; though there seems to be a storm *brewing* in the quarter of Mrs. Tabby.—*Smollett, Expedition of Humphry Clinker*.

- Brew. s.**

1. Manner of brewing; thing brewed.

Trial would be made of the like *brew* with potatoe roots, or burr roots, or the pith of artichokes, which are nourishing meats.—*Bacon, Natural and Experimental History*.

2. Preparation; ? place of preparation.

Above the northern nests of feather'd snows,
The *brew* of thunders, and the flaming forge
That forms the crooked lightning.

Young, Night Thoughts, ix.

- Brewage. s.** Mixed drink.

Go, brew me a pottle of sack finely.—With eggs, sir?—Simple of itself: I'll no pullet-sperm in my *brewage*.—*Shakespeare, Merry Wives of Windsor*, iii. 5.

After the malmsey, or some well-spiced *brewage*.—*Milton, Areopagitica*.

He that hath a sickly stomach admires at his happiness, that can feast with cheese and garlick-unctions, *brewages*, and the low-tasted spinage.—*Jeremy Taylor, Sermons*, 234. (Ord MS.)

The repast was dressed in the furnace, and was accompanied by a rich *brewage* [altered to *beverage* in the later editions] made of the best Spanish wine, and celebrated all over the kingdom as Bristol milk.—*Macaulay, History of England*, ch. ii.

- Brewer. s.** One who brews.

When priests are more in word than matter;
When *brewers* mar their malt with water.

Shakespeare, King Lear, iii. 2.

Men every day eat and drink, though I think no man can demonstrate out of Euclid or Apollonius, that his baker, or *brewer*, or cook, has not conveyed poison into his meat or drink.—*Archbishop Tillotson*.

And all that from the town would stroll,
Till that wild wind made work
In which the gloomy *brewer's* soul
Went by me, like a stork. *Tennyson, Talking Oak*.

- Brewery. s.**

1. Place for brewing.

Over the bridge is a great porter-brewery.—*Pen-nant*.

I could not but be somewhat diverted by hearing Johnson talk in a pompous manner of his new office, and particularly of the concerns of the *brewery*, which it was at last resolved should be sold.—*Boswell, Life of Johnson*.

2. Collective body of brewers; beer trade.

Broke. part. See Broken.

Broke-winded. adj. Same as Broken-winded. See concluding remarks under Broken.

And in the horrid cave were heard at once,
Brokewinded murmurs, howlings, and sad grones.
May, Translation of Lucan's Pharsalia, v.

Broken. part. of Break. (this is the true participle, of which Broke is an objectionable form: for the use of the latter in poetry the metre supplies a reason; in prose, however, the omission of the final syllable is common in both good and old authors.)

a. Used in the full form.
An old man, broken with the storms of fate,
Is come to lay his wearied bones among ye.
Shakespeare, Henry VIII, iv. 2.

And the widows of Asher are loud in their wail,
And the idols are broke in the temple of Baal,
And the might of the Gentile, unsmote by the sword,
Hath melted like snow in the glance of the Lord.
Byron, Hebrew Melodies.

The following, however, to which others could be added, shows that the bad grammar was resorted to for the sake of the metre.

The flying Mede, his shaftless broken bow;
The fiery Greek, his red pursuing spear;
Mountains above, Earth's, Ocean's plain below;
Death in the front, Destruction in the rear!
Byron, Child Harold, ii. 90.

In the long list of compounds of which this participle is the first element, the use of the fuller form (the form in *n*, or the genuine participial form) is almost universal. In Broke-winded, however, there is an instance to the contrary, which, like the majority of the objectionable forms of the simple word, occurs in poetry.

Broken-backed. adj. With the back, either in its anatomical or in any of its figurative senses, broken, strained, or cracked.

BROK

charges; only with the *broken meat*, a few coals, and all the cinders.—*Swift*.

Broken-winded. *adj.* See *extract*.

The disease of *broken-winded* horses is pulmonary emphysema; and Sir J. Floyer in his Treatise of the Asthma, published in 1698—after speaking of 'the *broken wind*, from the rupture as dilatation of the bladders of the lungs,' goes on to say that horses 'may strain the bladders and their muscular fibres, and thereby produce the same rupture and dilatation or hernia as happens in the *broken-winded*.'—*Watson, Lectures on the Principles and Practice of Physic*, lect. iv.

It is the *brokenness*, the ungrammatical position, the total subversion of the period that charms me.—*Gray, Letter to Mason*.

None saw his trickling tears—perchance, if seen, That useless flood of grief had never been: Nor long they flow'd—he dried them to depart, In helpless—hopeless—*brokenness* of heart.

Nor was this submission the effect of content, but of mere stupefaction and *brokenness* of heart. The iron had entered into the soul. The memory of past defeats, the habit of daily enduring insult and oppression, had cowed the spirit of the unhappy nation.—*Macaulay, History of England*, ch. xvii.

Broker. *s.* [Connected by Wedgwood with the root *br-k*, or *vr-ak*, itself connected with the meanings 'reject, refuse, criticize, select': meanings which he illustrates by references to the Lithuanic *brokoti* = blame; the Russian *brakovat* = select, -sort; the Danish *vrag* = exception, doubt, blame; the Dutch *braek goed* = goods damaged by sea-water; and other analogies. If hence, the original import of the word in question was 'rejecter, faultfinder, critic,' as in *Langlande*:

'Among bourgeois have I be
Dwelling at London,
And gart [made] Backbiting be a *brocour*
To blame men's war.'

Hence, also, the German *mahler*, connected with *mahel* = blemish, and the French *courtier* from *correcteur*. This view connects the word with *brack*, in *brackish* and its congeners, which, by an extension of the principles here indicated, are very numerous, *break*, &c.

Nevertheless, I prefer to connect it with *Brook* from *brucan*.

That it is immediately connected with *Broke v. n.* is beyond doubt. Against connecting this with *brook* the chief fact is the difference of the vowel sounds in the two words, viz. the sound of the long *o* in *broke* and *broker*, and the sound of the *oo* in *brook*. This, however, is neither more nor less than the difference between *Broach* and *Brooch*; words which are etymologically the same, but words wherein a modification of the import is connected with a modification of the sound and spelling.

If this affinity be real, the sequence of ideas is, 'use, be familiar with, do business with, act as a go-between, earn a commission for so acting'; this last meaning being closely connected with *use* as a term connected with the profits on lending money. How naturally the two words go together may be seen in the last three extracts under the third sense of *brocage*. That the office of a *broker* = blamer and a *corrector* are closely allied is true; and it is true that in the correction of anything we seek for

BROK

blemishes. Still, the office of the *corrector* is that of *inspector* rather than *broker*.

At the same time the fact of the words allied with *brak* and *break* on the one side, and with *brook* and *brucan* on the other, being words of a similar form, is worth noting; since what we see in our own language in the case of roots, beginning with *br* and ending with *k*, is also to be seen in Latin. The Latin equivalent to an initial *br* is *fr*; so that, while word for word *brook* = *fruor* (the *k* being given in the derived form *fructus*), the Latin for *break* is *frango*, a word which, while it contains in the present tense, and certain other forms, an *n*, gives in the preterite tense and the participle the simpler and more radical forms *freg-i*, and *frac-tus*.

The extract from *Langlande* would be more important than it is if it were not in a line, where the metre requires that three words should begin with *b*.]

1. One who brokes; factor.

a. In legitimate commerce.

Brokers, who, having no stock of their own, set up and trade with that of other men; buying here, and selling there, and commonly abusing both sides, to make out a little paucity gain.—*Sir W. Temple*.

Justice, on the contrary, is a mere mechanic virtue, fit only for tradesmen, and what is practised by every *broker* in Change Alley.—*Goldsmith, Miscellaneous Pieces, Justice and Generosity*.

b. In discreditable transactions; as a go-between, pimp, or matchmaker.

Id., Henry VI. Part III. iv. 1. At St. Matthew's, in Friday Street, a wretch named Timothy Hall, who had disgraced his gown by acting as *broker* for the Duchess of Portsmouth in the sale of pardons, and who now had hopes of obtaining the vacant bishopric of Oxford, was in like manner left alone in his church.—*Macaulay, History of England*, ch. xvii.

Since his services were not likely to be bought by William, they must be offered to James. A *broker* was easily found.—*Ibid.* ch. xvi.

2. Dealer in secondhand furniture or apparel.

What if poverty should rush upon me as an armed man, spoiling me of all my little that I had, and send me for my bread to another's cupboard?—for my clothes to the *broker's* shop or my friend's wardrobe?—*Bishop Hall, Heaven upon Earth*, § ii. (Ord MS.)

Brokerage. *s.* Commission on work performed by a broker.

Perhaps the match-maker is to have a valuable consideration in the way of *brokerage*, which she will most certainly deserve, if she can find any man in his senses who will yoke with Mrs. Bramble from motives of affection or interest.—*Smollett, Expedition of Humphry Clinker*.

Used adjectivally.

There being no tax on advertisements, the most trifling matter is announced, and a publisher appears to have a kind of *brokerage* trade at his counting-house, and to be empowered to sell or buy for parties; or, at least, to bring buyers and sellers together.—*S. Laing, Residence in Norway*, ch. iii.

Brokery. *adj.* Partaking of the character of a broker; mean; servile.

Shakespeare, Richard II. ii. 1.

Brome. *s.* See *Bromine*.

We see this parallelism in the properties of the different metals; in those of sulphur, phosphorus, and carbon; of chlorine, iodine, and *brome*; in the natural order of plants and animals, &c.—*Mill, System of Logic*, iii. 22. § 9.

Brome(-grass). *s.* [Lat. *bromus*.] Indigenous grasses of the genus *Bromus*.

Notwithstanding the almost universal dislike which agriculturists now have to the presence of either of these *brome* grasses [*Bromus arvensis* and *Bromus mollis*] in their hay-fields, and the care with which they examine samples of rye-grass seed with the view of preventing their introduction; yet there is strong presumptive proof that in many parts of Britain one, if not both, of these species formed the subject of field culture even prior to the general cultivation of rye-grass.—*Morton, Cyclopædia of Agriculture*, in voce.

Brómine. *s.* [Gr. *βρώμος* = fetid.—Of the two forms *Brome* and *Bromine*, the latter is the commoner; indeed, at present, it is the generally recognized scientific form. This is because its place in the same class with chlorine, iodine, and fluorine is acknowledged; of which class the termination *-ine* is, in chemical language, the sign.] In *Chemistry*. Elementary substance so called. See *extract*.

Bromine was discovered in 1826 by M. Balard, of Montpellier. It was originally obtained from the uncrystallized residue of sea-water, usually called *bittern*. . . . At common temperatures and pressures *bromine* is a deep reddish-brown liquid, of a strong disagreeable odour, whence its name. It emits a brownish-red vapour at common temperatures, &c.—*Brande, Manual of Chemistry*.

Brónchi. See *Bronchus*.

Brónchial. *adj.* [Fr. *bronchial*; from Gr.

βρόγχος = throat.] Belonging to the throat.

Inflammation of the lungs may happen either in the *bronchial* or pulmonary vessels, and may soon be communicated from one to the other, when the inflammation affects both the lobes.—*Arbuthnot*.

The sounds produced by the meeting and mingling of air with fluid in the *bronchial* tubes during the act of respiration I have called crepitations; and of crepitations I have made but one distinction only, large and small; large crepitation arises from air meeting and mingling with fluid in the larger bronchi; small crepitation from the same conditions in the smaller bronchi and the vesicles of the lungs.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. ix.

Bronchitic. *adj.* Connected with, arising from, suffering from, or consisting in, bronchitis; as in such medical terms as 'bronchitic affections, symptoms, patient,' &c.: (the more general term *Bronchial* is, perhaps, the commoner). See *Bronchitis*.

'Thunder and turf!' roared the Sultan, 'son of a dog! Nephew of a tadpole! Deceased wife's brother of a *bronchitic* pig! Do you laugh at my beard?'—*Sala, Secret of Mulay Mogrebbin Beg*, p. 189.

Bronchitis. *s.* [like the *-ine* in *Bromine*, the *-itis* in this word, and a long list of others, has a definite pathological import, signifying an inflammation of the particular tissue or organ of which the name is conveyed in the initial part of the word; e.g. *pericarditis* is inflammation of the pericardium, *nephritis* of the kidneys, &c. Most of these terms are less naturalized than the present.] Inflammation of the bronchi.

There is a form of chronic *bronchitis* in which all the conceivable forms of phthisis are present except the auscultatory; emaciation, hectic fever, cough, and a copious thick, yellow, globular expectoration. Yet the chest sounds well everywhere upon percussion, and the auscultatory sounds are purely bronchial and nothing more, and proceeding from the bronchi in their first divisions, and not beyond them.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. ix.

I have described acute *bronchitis* as it appears

BRONCHOCELE } BRON

when it terminates favourably. . . . But acute bronchitis may terminate unfavourably.—*Watson, Lectures on the Principles and Practice of Physic*, ii. 32.

Bronchocele. s. Swelling of the thyroid gland.

The simple bronchocele is a mere enlargement of the thyroid gland.—*Cooper, Surgical Dictionary*.

Bronchophony. s. [Gr. *βρόγχος* and *φωνή* = voice.] In *Medicine*. See extracts.

Of the other sounds, some still respect the respiration, some the voice, and some the act of coughing. They are what are called the bronchial respiration and the bronchial voice, or *bronchophony*. When there is bronchial respiration you hear the breathing, and when there is *bronchophony* you hear the voice, as you never hear them when all is healthy. . . . bronchial respiration or *bronchophony* arises when the lungs have undergone such changes as are calculated to render them better conductors of sound than they are in their natural and healthy state.—*Dr. P. M. Latham, Lectures on Subjects connected with Clinical Medicine*, lect. x.

A less degree of this, a sound like that of a person talking in a tube, and whose words, for that reason, are muffled and indistinct, is called bronchial voice, or *bronchophony*.—*Watson, Lectures on the Principles and Practice of Physic*, ii. 17.

Bronchotomy. s. [Fr. *bronchotomie*; from Gr. *βρόγχος* and *τομή* = act of cutting.] Operation which opens the windpipe by incision, to prevent suffocation.

The operation of *bronchotomy* is an incision into the *aspera arteria*, to make way for the air into the lungs, when respiration is obstructed by any tumour compressing the larynx.—*Sharp, Surgery*.

Bronchus. s. pl. bronchi. Portion of the trachea, or windpipe, between its bifurcation and its division into the smaller air-tubes, which consists of a primary tube, or bronchus, to each lung, *Anatomical and scarcely naturalized*; yet the root of more than one derivative.

The rings of the trachea are entire and cartilaginous: in some species the trachea bifurcates half way towards the lungs, the *bronchi* being of great length, and one of them usually describing a large curve. In *Testudo graeca* the left bronchus is three fourths longer than the tracheal trunk; but in *Testudo emol* the trachea is one fourth longer than the *bronchi*.—*Owen, Anatomy of Vertebrates*.

In *Psammisaurus griseus* the common trunk of the carotid does not bifurcate until it has ascended the neck as far as the origin of the bronchial tubes: and not until after the right aorta has arched over the right bronchus does it send off, at an acute angle, the common trunk of the right and left brachials.—*Ibid.*

In *Geckos* and *Scinks* the trachea terminates in the lungs without dividing into *bronchi*.—*Ibid.*

Brond. s. Same as Brand = sword. *Obsolete*.

Foolish old man, said then the pagan wroth,
That weenest words or charms may force withstand;
Soon shalt thou see, and then believe for troth,
That I can carve with this enchanted brond.

Spenser.

Bronze. s. [Fr. *bronze*; Italian, *bronzio*.]

1. Mixed metal, consisting of copper with a small proportion of tin, and sometimes of other metals.

Imbrown'd with native bronze, lo! Henley stands,
Tuning his voice, and balancing his hands.

Pope, Dunciad.

Used in Archeology in an *adjectival* sense, or as part of a *compound*, with *age*, *stage*, *period*, *epoch*, for the time during which bronze instruments were employed, opposed to the earlier stone and the later iron, as suggested by the following extract.

Stone, bronze, iron, and clay,—these four materials form the greatest portion of all our collections, as well as of all researches into antiquarian lore; next to these stand objects of an exclusively ornamental kind, composed of gold, silver, amber, glass, enamel, amongst which *bronze* and iron may also be occasionally reckoned. Horn and bone deserve no less notice, since both were used, not only for ornament, but also in the construction of weapons.—*Kemble, Hæra Ferales*.

2. Relief, or statue, cast in bronze.

I view with anger and disdain,
How little gives thee joy or pain:
A print, a *bronze*, a flower, a root,

All men have their faults; too much modesty is

BROO

his, says his Grace.—And yet I dare say you don't want assurance when you come to solicit for your friends.—O there, indeed, I'm in bronze.—*Goldsmith, The Goodnatured Man*, ii. 1.

4. Colour so called; brown with a yellow tinge and a metallic lustre.

Chrysochlorus [is] the only quadruped which presents us, in its glossy fur, with those beautiful metallic shades so common among birds, insects, and fish; in some lights the fur is green, in others golden orange, and this again changes into *bronze*. Its size is rather less than a mole.—*Swainson, Natural History of Quadrupeds*, § 135.

Bronze. v. a. Endow with the nature of, or make like to, bronze; cover with bronze lacquer; harden as brass.

1. Covered with, or coloured like, bronze.

His palace bright
Bastioned with pyramids of glowing gold,
And touched with shade of *bronzed* obelisks.

Keats, Hyperion, i. 178.

2. See extract.

[The use of the word *bronzed* in the sense of tanned, sunburnt, is probably not originally derived from comparison with the colour of the metal *bronze*, but from the primary sense of the Italian *bronze*, embers. *Abbronzare*, *abbronzare*, to roast on the embers, to scorch, tan.—*Wedgwood, Dictionary of English Etymology*.]

Brooch. s. [see Broach.] Jewel; ornament of jewels.

'I will speak out, for I dare not lie.
Pull off, pull off, the brooch of gold,
And fling the diamond necklace by.'

Tennyson, Lady Clare.

Brooch. v. a. Adorn with jewels. *Rare*.

Of the full-fortun'd Cæsar, ever shall
Be *brooch'd* with me; if knife, drugs, serpents, have
Edge, sting, or operation, I am safe.

Shakespeare, Antony and Cleopatra, iv. 13.

Brood. v. n. [A.S. *brod*, from *bradan*; Old English, *bród*.—that brood, breed, and bird, along with the German *brut* applied to the fry of fish, may all be connected, seems likely when we consider the near relation between warming, sitting as a hen, hatching, and producing offspring. In the following extract (from *Wedgwood*) the old High German gives us the word in question simply meaning *warms*: 'also unsih dui uuolla *bruoet* unde uuiider froste skirnet = even as us the wool broods (warms) and protects against the frost.' For its use in this sense in English see *Brooding*.]

1. Sit (as on eggs, to hatch them).

Thou from the first
Wast present, and with mighty wings outspread,
Dove-like sat'st *brooding* on the vast abyss,
And mad'st it pregnant.

After the fashion of oppressed sects, they mistook their own vindictive feelings for emotions of piety, encouraged in themselves by reading and meditation a disposition to *brood* over their wrongs, and, when they had worked themselves up into hating their enemies, imagined that they were only hating the enemies of heaven.—*Macaulay, History of England*, ch. i.

His memory long will live alone
In all our hearts, as mournful light

3. Deserve; earn.

Sir J. Hawkins, Observations in a Voyage to the
South Sea, p. 11.

Brook. v. n. Endure; be content; bear.

cause he could not *brook* that the worthy prince
Plangus was, by his chosen Tiridates, preferred

Brooklet. s. [There is a difference of opi-
nion concerning the origin of the last syl-
lable in this word.

Concerning its import there is more
unanimity: It is evidently a diminutive
affix.

Being this, however, it is found in none
of the languages from which the English
is likely to have taken it; there being no
such diminutive as *-let* in either the An-
glo-Saxon or the Anglo-Norman, the La-
tin or the Greek. Neither is it German
or Danish; indeed, it is wholly wanting
throughout the allied languages.

On the other hand, the French has the
termination *-et*; whilst, in the German
languages in general, the termination *-l* is
by no means rare.

In English it occurs in comparatively
few words; whilst the evidence as to its
nature is often indirect and obscure. Thus,
while *knuck-le* = small bone is common
enough, *knuck* = bone in general is by no
means a familiar word. That it is not to
be found in English at all is, probably, an
unsafe assertion. It is only certain that
the most familiar instance of it is the Ger-
man *knock*. Most of the other instances,
of which the list is short, are in the same
condition: i.e. they are rarely found in
both forms, the simple and the derivative,
in one and the same stage of the English
language.

This, with many competent authorities,
invalidates the doctrine that the *-l* and *-et*,
in words like the present, are brought from
different languages (the *-l* from the Anglo-
Saxon, and the *-et* from the French); and
one of the hypotheses by which the whole
syllable is deduced from a single language,
and the exceptional phenomenon of a hybrid

BROO

formation avoided, connects it with the word
litt-le; so that the analysis of the word
under notice would be *brook + lit* (= *little*).
In favour of this view are certain Scandi-
navian compounds, in which *lille* = *little* is
affixed to certain proper names; e.g. *Meta*,
which thus becomes *Metallile*, or *Little*
Meta.

That a difficulty is created by the rarity
of English diminutives in *-l* in general,
and by the nonexistence of such particular
words as *brookle*, *streamle*, and the like,
(from which, according to the doctrine that
makes the form a hybrid one, *brooklet* and
streamlet must be derived,) is not denied.
On the other hand, however, this is the
doctrine which requires the fewest as-
sumptions.

It is doubtful, however, whether the form
itself deserves the exhibition of any hypo-
thesis at all for its explanation; the words
in which it is found being, generally, evi-
dent coinages of the author who supplies
the examples of them. The words in *-let*
belonging to the language of common life
are extremely few, *ringlet*, *streamlet*, and
hamlet being the chief of them; for the
detail of which see the several entries.
That nine out of ten of the newer forma-
tion, *kinglet*, *hooklet*, and a long list of
others, are scarcely to be called English
words, will probably be the opinion of every
reader who trusts to his own instinctive
perception of what belongs to his mother-
tongue, and what does not, rather than to
the authority of certain writers; some of
whom are very indifferent ones.

It is in works of a poetical tinge that
these diminutives are the commonest; and
here they ought most especially to be con-
demned as superfluous. Next to poetry
and poetical prose, works on Vegetable and
Animal Physiology supply us with the chief
instances. Here the coinage of such words
as *hooklet*, &c., is more excusable; dimin-
utives being often wanted from the nature
of the subject. With all this, the termina-
tion is objectionable.]

Small brook.

Thus meditating, he arrived at the banks of the
little *brooklet*, and was awakened from his reverie by
the sound of his own name.—*Sir E. Bulwer, Eugene*

Brooklime. s. [the second element of this
compound, the *lin* in the German *lüne-*
kraut, and the *lem* or *ledm* in the Scandi-
navian *lemmike*, *ledmike*, has nothing to do
with the ordinary word *lime*.] Veronica

Since the time of drinking this diet-drink, Sir
Thomas Millington, coming to see me, discovering
my condition, told me that he believed no outward
application would do me any good, and advised me
to use a plain antiscorbutic diet-drink made of dock
roots, water-cress, *brooklime*, plantain, and alder-
leaves, which I have done now this fortnight, but, as
yet, have received no sensible benefit by it, my sores

strangler*) is the German *erbsewürger*,

Brother. *s.* (the plural of *brother* is *brothers*, i.e. the plural in *-s* of an ordinary noun: *brethren* is a collective rather than a plural noun. Another form, and an older, though a rarer one, is *breðre*; in which we have the simple change of vowel, as in *goose, geese, mouse, mice, &c.*; the addition of the *n* being a secondary process.) [*A.S. brother.*]

by Cooper. The eye is steady, vigilant, resolute,

Brow. *v. a.* Form a raised edge to; bound.

Tending my flocks hard by i' th' hilly crofts,

That brow this bottom glade. *Milton, Comus, 532.*

Browbeat. *v. a.* [This, as far as its form

goes, is an exception to the general rule that no

transitive verb preceded by a noun forms a

compound; notwithstanding the existence

of numerous *apparent participles*, such as

leavetaking, haymaking, and many others.

No such *verbs*, however, as *leavetake* or

haymake exist; or, if they do, they exist

only as verbs derived from the participial

forms; not as verbs from which the partici-

ple itself is derived.

The full details of this combination will be

found in the Preface, so that here they are

but slightly noticed. The principle which

forbids such compounds as *leavetake, hay-*

make, &c., rests on the fact of the ordinary

construction of a transitive verb with its

substantive placing the substantive *last*.

As we say *take leave*, and *make hay*, such

compounds as would arise out of the ag-

glutination of the two separate words into a

single compound, would take the form of

spitfire, daredevil, and others, in which the

verb *precedes*.

In *browbeat*, however, though the ele-

ments are of the same kind as *hay* and

make in *haymake*, the import of the com-
pound is different. *Browbeat* is not to
beat the brow; nor is *brow* an objective case
governed by the verb. It is rather a sub-
stantive in the instrumental case—a com-
mon one in many languages, and one of
which we have fragments in our own (see
The *as in all the more*, and *Why*)—with
the meaning of *beat* (or intimidate) *with*,
or *by means of*, the *brow*. Hence its power
is, more or less, adverbial.]

Depress with severe brows, and stern or
lofty looks.

Young men, prentices, servants, the common sort,
are so far from hiding themselves, or rising up, that
I have often seen the magistrate faced, and almost
brow-beaten, as he hath passed by.—*Dr. J. White,*
Sermons, p. 64: 1615.

It is not for a magistrate to frown upon, and
browbeat those who are hearty and exact in their
ministry; and, with a grave nod, to call a resolved
zeal, want of prudence.—*South.*

Count Tariff endeavoured to *browbeat* the plain-
tiff, while he was speaking; but though he was not
so impudent as the count, he was every whit as
sturdy.—*Addison.*

I will not be *browbeaten* by the supercilious looks
of my adversaries.—*Arbutnot and Pope, Martinus*
Scriblerus.

Your brother Smythe *brow-beats* a jury, and forces
them to alter their verdict, by which they had found
a Scotch serjeant guilty of murder.—*Junius, let. 83.*

Accordingly, while he was in secret drawing up a
refutation of the whole romance of the Popish plot,
he declared in public that the truth of the story
was as plain as the sun in heaven, and was not
ashamed to *browbeat*, from the seat of judgment,
the unfortunate Roman Catholics who were ar-
raigned before him for their lives.—*Macaulay, His-*
tory of England, ch. ii.

Browbeating. *verbal abs.* Act of depressing
by stern or lofty looks.

What man will voluntarily expose himself to the
impetuous *browbeatings* and scorns of great men?—
Sir R. L'Estrange.

Generally speaking, I believe that a quiet, gentle,
and straightforward, though full and careful, exami-
nation, will be the most adapted to elicit truth;
and that the manoeuvres, and the *brow-beating*,
which are the most adapted to confuse an honest
witness, are just what the dishonest one is the best
prepared for.—*Whately, Elements of Rhetoric.*

Bruisewort. *s.* Indigenous plant so called: (Saponaria officinalis L.; and according to Dr. Prior, *Bellis perennis*, i. e. the common daisy. The Saponaria, however, is the plant to which the name is most conveniently limited; for, not to mention the

absence of evidence of its application to the daisy, a plant with the saponaceous quality of making a lather might, like the saponaceous opodeldoc, be used for bruises). It is commonly called Saponaria, of the great scouring quality that the leaves have; for they yield out of themselves a certain lye, when they are bruised, which scoureth almost as well as soap; although Baelius describes a certain other soapwort. Of some it is called *Alisma* or *Damasonium*; of

Catharine of Braganza is there represented as a lovely glowing *brunette*, with enchanting dark eyes and a rich profusion of chestnut hair, disposed in a waved pyramid on each side of her face, consisting of parallel lines of cannon curls descending in graduated rows to the waist, in a most extraordinary and unaccountable fashion, as if in imitation of a Lord Chief Justice's state-wig, but without powder.—Agnes Strickland, *Lives of the Queens of England*, Catharine of Braganza.

Brunt. *s.*

[*Brunt*. Assault, onset, heat. Commonly explained from German *brunst*, heat, strong passion. But the meaning is distinctly the front of an assault.

That in all haste he would join battayle even with the *brunt* or breast of the van garde." (Hall, in Richardson).

The shot of arblasters—overthrew many a horse and man, and specially the fore rydars that put themselves in prese with their longe and sharpe launcys to win the first *brunte* of the field." (Fabyan, in Richardson).

The metaphor is really derived from the practice of hanging a bell on the leading beast of a herd, which the others then readily follow. Hence the expression of *bearing the bell* for being the first in a company. Now the Servian has *brunza*, a cattle bell, from the material of which it is made, and the thing must once have been known by the same name in the language of the Grisons, in which *brunza* now signifies the first of a train of baggage animals, the bell-mule, while the diminutive *brunzina* is applied to a cattle bell, and *portar la brunza* is actually used in the sense of being the first in anything. If we read the phrase *portar la brunza*, it would exactly correspond to our expression of bearing the *brunt*, and the meaning of the word *brunza* being lost in its adoption into English in the form of *brunt*, it would acquire from the context the sense of onset, shock.—Wedgwood, *Dictionary of English Etymology*.]

1. Shock; onslaught; blow; stroke.

God, who caus'd a fountain, at thy prayer,

From the dry ground to spring, thy thirst t' allay

After the *brunt* of battle.

With endure, bide, and bear.

Erona chose rather to bide the brunt of war, than

In the close covert of her knifeful eye,
Thence breaking forth did thick about me throng,

Brush. s. [from Fr. *brosse*.]

1. Implement for cleaning anything, by rub- bing off the dirt or soil: (generally made of bristles set in wood).

Mr. T. Mason obtained a patent in October, 1830,
for an improvement in the manufacture of this ar-
ticle. It consists in a firmer mode of fixing the
knots or small bundles of hair into the stock or the
handle of the brush. This is done by forming grooves
in the stocks of the brushes, for the purpose of re-
ceiving the ends of the knots of hair, instead of the
holes drilled into the wood, as in brushes of the com-
mon construction. These grooves are to be formed
like a dovetail, or wider at the bottom than the top:
and when the ends of the knots of hair have been
dipped into cement, they are placed in the grooves
and compressed into an oval form, by which the
ends of the hair will be pressed outwards into the
recess or wider part of the dovetailed groove; or
the grooves may be formed with threads or teeth on
the sides, instead of being dovetailed; and the cement
and hairs being pressed into the teeth or
threads will cause them to adhere firmly to the stock
or handle of the brush.—*Ure, Dictionary of Arts*,
Manufactures, &c., p. 196.

2. Larger and stronger pencil used by paint- ers.

Whence comes all this rage of wit? this arming

Brush. v. a.

unexceptionable length and breadth, were just before

the people themselves (whether arising from those or
from any other causes) in respect of blind and
precipitate rashness, gross ignorance, and ferocity
of disposition.—*Whateley, Elements of Rhetoric.*

Men of the highest rank openly rioted in drunken-

She [Austria] relies on the incontrovertible arguments of her cannons and bayonets, on the active vigilance of her police, and above all on the division and helplessness of the petty states which she holds under her control, on the ignorance and insensibility of *brutified* masses, and on that anxious and jealous love of peace which very justly opposes the propagandism of liberal opinions, and prevents the powers of Europe from espousing the cause of the oppressed.—*S. Edwards, The Polish Captivity.*

Búbble, *s.* (construction often *adjectival*, as in 'bubble', = unsubstantial, companies.)

1. Small bladder of water; film of fluid filled with gas.

Bubbles are in the form of a hemisphere; air within, and a little skin of water without; and it seemeth somewhat strange, that the air should rise so swiftly while it is in the water, and when it cometh to the top, should be stayed by so weak a cover as that of the *bubble* is.—*Bacon.*

The colours of *bubbles* with which children play, are various, and change their situation variously, without any respect to confine or shadow.—*Sir I. Newton.*

Lorenzo! since eternal is at hand,
To swallow time's ambitions; as the vast
Leviathan the *bubbles* vain, that ride
High on the foaming billow; what avail
High titles, high descent, attainments high,
If unattain'd our highest?

3. Person cheated.

Cease, dearest mother, cease to chide;
Ganny's a cheat, and I'm a *bubble*;

In these two senses the word was at its maximum of circulation and popularity in the first half of the last century. Vulgar as it is, it appears in almost every chapter of so authoritative a writer as Bolingbroke.

I suppurated it after the manner of a *bubo*, opened it, and endeavoured detersion.—*Wiseman, Surgery.*

Especially *venercal*.

You'll say, perhaps,
That clouds were famed for giving claps;
But who would ever claps ethereal
Compare in mischief to venercal?
Can clouds give *buboes*, ulcers, blotches,
Or from your noses cut out notches?

Swift.

Búbbonocoele, *s.* [Gr. *βουβών* = groin, *κίλη* = tumour.] Particular kind of rupture, when the intestines break down into the groin.

When the intestine, or omentum, falls through the rings of the abdominal muscles into the groin, it is called *Hernia inguinalis*, or, if into the scrotum, *scrotalis*: these two, though the first only is properly so called, are known by the name of *bubonocoele*.—*Sharp, Surgery.*

The only parts which present any colour are the *buccal* mass, &c.—*Huxley, Philosophical Transactions*, 143, 1.

Buccaneer, *s.* (used *adjectivally* also.) See extract from Wedgwood:

[A set of pirates in the 17th century, who resorted to the islands and uninhabited places in the West Indies, and exercised their cruelties principally on the Spaniards. The name, according to Olivier Oexmelin, who wrote a history of adventurers in the Indies, is derived from the language of the Caribs. It was the custom of those savages, when they took prisoners, to cook their flesh on a kind of grate, called *barbacoe* (whence the term *barbecue*; a barbecued hog, a hog dressed whole). The place of such a feast was called *bucan* (or according to Cotgrave the wooden gridiron itself), and this mode of dressing, in which the flesh was cooked and smoked at the same time, was called in French *boucaner*. Hence those who established themselves in the is-

lands for the purpose of smoking meat were called buccaniers. The term *buccan* is still applied in the West Indies to a place used for the drying of produce.—*Wedgwood, Dictionary of English Etymology*.

Whether gold will not cause either industry or vice to flourish? And whether a country, where it flowed in without labour, must not be wretched and dissolute like an island inhabited by buccaneers?—*Bishop Berkeley, Querist*.

By this time all the Antilles and all the shores of the Gulf of Mexico were in a ferment. The new colony was the object of universal hatred. The Spaniards began to fit out armaments. The chiefs of the French dependencies in the West Indies eagerly offered assistance to the Spaniards. The governors of the English settlements put forth proclamations interdicting all communication with this nest of buccaneers.—*Macaulay, History of England*, ch. xxiv.

(For an example of adjectival construction see under next entry.)

Buccaneering. verbal abs. Act, practice, or profession of a Buccaneer.

The shaggy men of stern aspect, with a formidable talent for fighting, were of the same race that about eight hundred years later, in a rather buccaneer fashion, crossed the German Ocean, invaded and conquered this country, and imposed its institutions and language on the greater number of its inhabitants. We may forgive them their buccaneering, since to them we owe Bacon and Newton, Shakespeare and Milton, the steam-engine, the American republic (now as populous as the parent country), and the conquest of India. Assuredly no other race of men has ever achieved such things.—*Crawford, On the Civilization of Man*.

Buchu. s. [see extract.] Tree so called (*Diosma crenata*).

This plant grows at the Cape of Good Hope, and is called by the natives *Buchu*. The leaves are diuretic and anodyne, and have been found useful in cases of chronic irritation of the kidney and urinary bladder. . . both water and alcohol extract the medicinal virtues of the *buchu* leaves, which seem to reside in a volatile oil and extractive matter.—*Hoeper, Medical Dictionary*, in voce.

Buck = Beech. See Buckwheat.

Buck. s. [A.S. *bucca*.] Male of the fallow deer; male of rabbits and some other animals (in which cases it usually forms the first element of a compound, as *buck-goat*).

Bucks, goats, and the like are said to be tripping or salient, that is, going or leaping.—*Peacham*.

No alderman ever longed after a haunch of *buck* venison more than I for a spiritual taste of that 'White Doe' you promise.—*Lamb, Letters to Wordsworth*.

I've got nothing in my bag but an old *buck* rabbit with a nob tail.—*Theodore Hook, Gilbert Gurney*, vol. i. ch. v.

Buck. s. [?] perhaps no more than a corrupt English pronunciation of *beaux*.

Ay, ay; that's right. Put the saddle on the right horse, my *buck*.—*Colman the elder, The Jealous Wife*, v. 3.

Buck. s.

[Formerly, when soap was not so plentiful a commodity, the first operation in washing was to set the linen to soak in a solution of wood ashes. This was called *bucking* the linen, and the ashes used for that purpose were called *buck-ashes*. The word was very generally spread. In German it is *beuchen*, *bäuchen*, *beichen*, *buchen*, *büchen*, *büken*. Swedish, *byka*; Danish, *byge*; French, *buquer*, *buer*; Italian, *bucare*; Breton, *bugd*. Spanish, *bugada*, lye. The derivation has been much discussed. The more plausible are: Danish, *bog-asker*, the ashes of beech-wood, chiefly employed in making potash; but the practice of bucking would have arisen long before people resorted to any particular kind of wood for the supply of ashes. Italian, *bucata*, buck ashes, supposed to be so called from *bucca*, a hole, because the ashes are strained through a pierced dish, in the same way that the term is in Spanish *colada*, lye, bucking, the linen at buck, from *colare*, to strain, to filter, to buck, lessiver, faire la lessive. But the analogy does not hold, because *bucare* does not appear ever to have been used in the sense of straining or filtering. The true derivation is seen in Gaelic *bog*, moist, soft, tender, and as a verb, to steep or soak. Breton

BUCK

buck, soft, tender, *boukaat*, to soften.—The ideas of wet and soft commonly coalesce, as German *erweichen*, to soak, from *weich*, soft; Italian *molle*, soft, wet; Latin *molle*, to soften, and French *molle*, to wet. Polish *mokry*, wet; *miekki*, soft; *mieknac*, to soak, to soften; *możyć*, to soak foul linen before washing. Bohemian *mok*, a steep for flax. To *buck* then would originally be to set the linen to soak in lye, and as *m* and *b* so often interchange, the word is doubtless identical with *mok*, the root of the Slavonic words above mentioned, and of the Latin *macero*, to soak.—*Wedgwood, Dictionary of English Etymology*.

1. Lye or liquor in which clothes are washed.

Buck! I would I could wash myself of the buck! *Buck, buck, buck!* Ay, buck; I warrant you, buck, and of the season too it shall appear.—*Shakespeare, Merry Wives of Windsor*, iii. 3.

Buckbean. s. [see Buckwheat.] *Menyanthes trifoliata*: (a bitter and astringent indigenous plant, growing in boggy places, with a white flower and leaf slightly resembling that of the bean; akin to the gentians, and used in some countries instead of the hop).

Marsh trefoile is called in High Dutch Biberklee, that is to say Castoris trifolium, or Trifolium fibrinum: in Low Dutch, of the likeness that the leaves have with the garden beanes, Boezboomen, that is to say *Faselus hercinus* or *Boona hercina*: the later herbalists call it Trifolium palustre and paludosum: of some Isopyrum: in English, Marsh-clauser, Marsh-trefoile, and *Buckles-beanes*.—*Gerarde, Herbal*, p. 1194: ed. 1633.

Buckbean, believed by some botanists to have been originally bog-bean, which, from its French synonym *tréfle des marais*, is very plausible, but that in Dutch also it is called *bucks-boonen* and in German *bucks-bohne*, and is considered a remedy against the scabber-buck or scurvy, whence it is called *scharbucks klee*. *Buckles-beane*, and not *bog-bean*, is the name of it in all the old herbaria, and this must be admitted to be the proper and established one; being no doubt derived from the Dutch word, one which seems to be a corruption of Latin *scorbutus*, the scurvy.—*Dr. Prior, Popular Names of British Plants*.

In the following extract the second element seems to be *dane*.

The bitter nauseous plants, as centaury, *buckbane*, gentian, of which tea may be made, or wines by infusion.—*Sir J. Floyer*.

Bucket. s. [Fr. *baquet*.]

1. Vessel in which water is drawn out of a well.

Swift.

Bucketful. s. Amount sufficient to fill a bucket.

When there were calves still young enough to want *bucketfuls* of fragrant milk.—*Silas Marner*.

[This, like the other compounds of *full* and a noun denoting a measure of any kind (such as *spoon*, *pocket*, &c., giving *spoonful*, *pocketful*, &c.), has two plurals; one formed by adding the *s* to the former,

BUCK

the other by adding it to the latter, element: *spoonsful* and *spoonfuls*, *pocketsful* and *pocketfuls*, *bucketsful* and *bucketfuls*, &c.

In either case the word is a compound, the accent being *bucketsfuls*, *bucketfuls*; *spoónfuls*, *spoónful*, &c.

Such, at least, is the view, if (as in the present edition) we take the accent as the test of composition. See Preface.

Two *buckets* or two *spoons ful* means something different; i. e. the combinations convey a meaning in which we look less at the measure itself than at the necessity of having it complete. In the true compounds, on the other hand, we look at the nature of the measure rather than at the accuracy of the measurement.

In the matter of form, *bucketfuls* is the truer plural of the compound; *bucketful* being the plural of the first word in a combination which, from its accentuation, assumes the appearance of a compound, though not one in the strictest sense of the term.]

Buckhorn. s. See Buckshorn.

Buckhound. s.

1. Hound for chasing deer.

The divell useth them as huntsmen doe their little beagles, which they ply the deere withall till he be heated and blowne, and then clap they on great *buck-hounds*, that may pull him down, and plucke out his throat.—*Gataker, Christian Constance*, 325. (Ord MS.)

2. In the plural. Name of an office in the royal household.

'There is a report that Rambrooke is to have the *Buckhounds*: but I cannot trace it to any authority.'—'Pooh!' said Lord Eskdale, 'I don't see why Rambrooke should have the *Buckhounds* any more than anybody else. What sacrifices has he made?'—*Disraeli the younger, Coningsby*, b. ii. ch. iv.

Give, yield, lay down, as opposed to take up, the bucklers.

A most manly wit, Margaret, it will not hurt a woman; and so, I pray thee, call Beatrice: I give thee the bucklers.—*Shakespeare, Much Ado about Nothing, v. 2.*

The above is a well-known extract from Shakespeare. It is one, however, which, though sufficient to serve as a text for the forthcoming remarks upon the word *buckler* in its present sense, can safely be curtailed of its conclusion; the continuation of the dialogue, though it gives another sense to the term under notice, being, so far as it fails to explain itself, not worth explaining. In stating this, the editor merely repeats Johnson in his character of Shakespearean commentator, rather than in that of lexicographer.

Johnson writes that *give the bucklers* means *yield or give in*; and compares the phrase with the Latin *clypeum abjicere* = throw away the shield. As far as the general sense goes, this interpretation

is sufficiently accurate. It fails, however, to show that, though phrase for phrase to give may mean to yield the bucklers, the word *buckler* is, word for word, *clypeum*; although, looking merely at the rendering of the two words, this is what the English and Latin dictionaries give us.

Steevens supplies instances; and in these lie the main argument against *buckler* = *clypeum*. They are all in the plural number.

At this his master laugh'd, and was glad, for further advantage, to yield the bucklers to his pretense.
—*Greene, Cony-catching, pt. ii.*

If you lay down the bucklers you lose the victory.—*Id., Every Woman in her Humour.*

It goeth against his stomach [the cock's] to yield the gauntlet and give the bucklers.—*P. Holland, Translation of Pliny.*

The sense of the second and third of these extracts is only partially contrasted with that of the others. The first, fourth, fifth, and sixth denote the act of a vanquished opponent; yet the second and third do not denote the act of a conqueror. What they denote is the act of a challenger, or champion; of one who defies his opponent, but of one who may or may not beat him. In neither case, however, will the ordinary sense of *buckler* (= shield) give the details of either the challenge or the defeat, since each combatant could wear but one such. In the extract from Holland the original text throws no light; for it contains no such word as *clypeum*, nor any word which sustains his metaphor. It was evidently one which he got from the customs of his own times, rather than from the text of his original. This suggests that the word under notice meant something buckled either on both hands as in case of boxers, or on both feet as in that of fighting cocks.

Buckler. v. a. Support; defend.

Fear not, sweet wench, they shall not touch thee,
Kate,
I'll buckler thee against a million.

Shakespeare, Taming of the Shrew, iii. 2.
Can Oxford, that did ever fence the right,
Now buckler falsehood with a pedigree?
Id., Henry VI. Part III. iii. 3.

Buckling. adj. Wavy (applied, especially by the author quoted, to that variety of human hair which, without exactly curling, has a wavy character); sometimes simply curling. *Rare*

With the European races, the hair of the head is usually soft, silky, and buckling. With the races of the continent of Asia, of America, and generally with the Malayan and Polynesian nations, it is long, lank, and coarse. With the negroes of Africa it is short and woolly, covering the whole scalp. With the Oriental negroes it is also woolly in texture, but it grows in long isolated tufts.—*Crawford, On Classification of the Races of Man.*

Buckmast. s. [for the first element see Buckwheat; for the second, Mast.] Seed of the beech; beech itself.

The beech flourish in April and May, and the fruit is ripe in September, at what time the deers do cate the same very greedily, and greatly delight therein; which has caused foresters and huntsmen to call it *buck-mast*.—*Gerarde, Herbal, p. 1443: ed. 1633.*

Buckram. s. [*Fr. bougram.*] Sort of strong linen cloth, stiffened with gum or glue, used by tailors and staymakers.

One that not long since was the *buckram* scribe,
That would run on men's errands for an asper.
Beaumont and Fletcher, Spanish Curate.

Buckrams. s. [*? buch*, and the first element in *ramsons*, q. v.] Indigenous sort of onion or garlic (*Allium ursinum*).

Ramsons are named of the later practitioners *Allium ursinum*, or Beares garlicke; *Allium latifolium* and *Moly Hippocraticum*; in English Ramsons, Ramsies, and *Buckrams*.—*Gerarde, Herbal, p. 180: ed. 1633.*

Bucksbean. s. See Buckbean.**Buckshorn, also Buckhorn. s.** Indigenous plants (*Plantago media* and *Coronopus Ruellii*), the leaves of which divide like the horn of a buck.

Of *buckshorn* plantaines, or hartshorne, *Bucks-horne* or *Hartshorne* hath long narrow, hoary leaves, cut on both sides, &c. . . . *Ruellius' Bucks-horne*, or *Swines-cress*, hath many small and weak stragling branches, trailing here and there. . . . *Buckshorn* is called in Latin *Cornu cervinum*, or *harts horne*.—*Gerarde, Herbal, p. 428: ed. 1633.*

Buckthorn. s. [catachrestic translation of Gr. *πυλάκωνδα*, from *πύλος* = *burus* = box (tree), *κωνδα* = thorn.—see last extract.] Tree of the genus *Rhamnus*: (in England, the *Rhamnus catharticus* and the *Rhamnus minor*).

The later herbalists call it in Latin *Rhamnus solutius*, because it is set with thornes, like as the ram, and beareth purging berries. *Mathiolus* named it *Spina infectoria*, *Valerius Cordus* *Spina cervi*, and divers call it *Burkispina*. It is termed . . . in English *Laxative Ram*, *Way-thorne*, and *Buckthorne*; in Low Dutch they call the fruit or berries *Rhijn-beeren*: that is as though you should say in Latin *bacca Rhenanae*, in English *Rheinberries*.—*Gerarde, Herbal, p. 1338: ed. 1633.*

Yes, physis; *buckthorn*, senna, and so forth.—*Colman the younger, The Poor Gentleman, ii. 2.*

Buckthorn, from Middle Latin *spina cervina* . . . of *Valerius Cordus*, who . . . seems to have misunderstood that of *box-thorn*, German *buxdorn*, translation of the *πυλάκωνδα* of *Diocorides*.—*Dr. Prior, Popular Names of British Plants, in voce.*

Buckwheat. s. [translation of Lat. *Fagopyrum*, from Gr. *φῡγός*, Lat. *fagus* = beech, *πῡρον* = wheat. Brank is another name for this plant. The words *buck* (better spelt *buch*, so that the connection with the word *beech*, German *buch*, may be exhibited) and *brank* have both had their import unduly extended.

(1.) Word for word, *brank* is the English form of both the Latino-Gallic (see *Brank*) *brance*, and the Low Latin *branca* = paw. Hence *brankursin* is the name of a plant, otherwise called, rarely, though properly, the *bearsbrank*, and, commonly, though catachrestically, the *bearsbreach*; *bearsfoot* being another synonym. This is the *Acanthus mollis*.

(2.) The *Menyanthes trifoliatum* is called *Buckbean*.

The comparative frequency of the word *buck* = beech in compounds, and its rarity or non-existence as a modern current name of the *beech*, taken as a simple term, requires notice. Both *bóc* and *béce* occur in Anglo-Saxon, the latter most commonly. Hence, words like *buckmast* and *buckwheat* may be English words derived from the scarcer of the two concurrent.

forms. But they may also be words derived direct from the German, as ready-made compounds, wherein *buche* is the ordinary name for *beech*, wherein *buchmast* and *buckweiz* are the common compounds, and wherein both the *mast* and the *wheat* are commoner as food than in modern England. Form for form, *beech* should be compared with *bench*. Each comes from a word in *-ce*, i.e. *béce* and *bence*. Each has a broader concurrent form *bóc* and *banc*; and each changes the *ce* into *ch* (= *tsh*), as is generally the case when *c* precedes a small vowel, and is not simply sounded as *s*.]

Polygonum Fagopyrum: (indigenous or naturalized plant of the order *Polygonaceae*, with three-cornered seeds like those of the *beech*).

Buckwheat is considered a native of Asia, and not of Europe, though sometimes found in a seemingly wild state. . . . In China, and other countries of the East, it is cultivated as a bread-corn. The flour is also used in cookery and bread-making in various parts of Europe, to make cakes and crumpets in England, and as rice or gruel in Germany and Poland. The seed is said to be excellent for horses and poultry.—*Loudon, Encyclopedia of Plants*, p. 327.

Bucólic. *adj.* [Gr. *βουκολικός* = appertaining to a cowherd, *βοῦκος*.] Pastoral.

The pastoral form is a fault of the poet's times: it contains also some passages, which wander far beyond the bounds of *bucolic* song.—*T. Warton, Notes on Milton's smaller Poems*.

The author's [Barklay's] *eclogues*, I believe, are the first that appeared in the English language. They are like *Petrarch's* and the *Mantuan's* of the moral and satirical kind, and contain but few touches of rural description and *bucolic* imagery. . . . I shall only add here, that before the close of the fifteenth century, *Virgil's* *bucolics* were translated into Italian by *Bernardo Pulci*, *Fossa de Cremona*, *Benevieni*, and *Fiorenzo Buoninsegni*.—*Id., History of English Poetry*, § 23.

Bud. *s.* [? *Fr. bouton*; the doubt here indicated is suggested by the first extract.] First shoot of a plant; gem.

[Not immediately from French *bouter*, Dutch *botten*, to push, put forth, bud, as the final *t* is never converted into a *d* in the adoption of a word into English. A nearer connexion is *Bohemian bod*, a prick, Lithuanic *badyti*, to prick, stick, the root of English *bodkin*, an instrument for pricking. The first appearance of the germ is expressed by the notion of pricking, piercing, as in French *poindre du jour*, the peep of day. *Bohemian bodka*, a point, *bodec*, a thorn, sting, *bodlak*, a thistle, &c.—*Wedgwood, Dictionary of English Etymology*.]

Writers say, as the most forward bud Is eaten by the canker ere it blow, Even so by love the young and tender wit Is turn'd to folly, blasting in the bud, Losing his verdure even in the prime. *Shakespeare, Two Gentlemen of Verona*, i. 1.

These sonnets, like the *Venus* and *Adonis*, and the *Rape of Lucrece*, are characterized by boundless fertility and laboured condensation of thought, with perfection of sweetness in rhythm and metre. (Ord MS.)

tion with a portion of serum and much albumen, not only chiefly constitutes it, but modifies it according to the state of vital influence and vascular action.—*Copland, Dictionary of Practical Medicine*, i. 182.

The primary sense of *buffeter* seems to have been to take out the vent peg of a cask, and let in the air necessary for drawing out liquor. . . . 'Si vos chartiers—amenant pour la provision de vos maisons certain nombre de tonneaux de vin les avaient buffetés et beus à demi, le reste emplissant d'eau, &c.'—*Rabelais*. *Buffeter*, to marre a vessel of wine by often tasting it; *buffet*, deaned, as wine that hath taken wind, or hath been mingled with water.—*Colgrave*. . . . Carpenter, who does not understand the phrase. French, *buffeteur*; Middle Latin, *buffetarius*, tabernarius, caupo. *Buffetarium*, the duty paid for retailing of wine in taverns. The verb *buffeter* may thus be translated to tap, and *vin de buffet*, wine on tap; *buffetier*, a tapster. Thus *buffet* would signify the tap of a public-house or tavern, the place whence the wine was drawn. From thence it has been transferred in English to the sideboard on which the drinkables are placed at meals, and in French to the office in a department where other kind of business is carried on, while in Spanish it has passed on to signify simply a desk or writing-table.—*Wedgwood, Dictionary of English Etymology*.

Buld. v. a. (preterite participle, *bulld*; more properly, *bullded*.) [*Wedgwood* derives this word from the Norse *bol* = farm, *byli* = habitation, *bylja* = raise a habitation. He also gives the following extract from Sir John Mandeville:

'That city took Josue and destroyed it and cursed it and alle hem that *bylled* it again.'

Richardson refers us to the A.S. *byldan* = confirm, strengthen; herein adopting *Horne Tooke's* view. He adds that the Dutch *bielden* and German *bilden* are used more widely, and signify to form, fashion, represent, or shape generally. *Grimm*, however, who expressly connects the German word with the Dutch, as expressly states that neither the one nor the other is to be found in *Moesogothic*, *Anglo-Saxon*, or *Old Norse*; the instances to the contrary being only apparent. This complication, along with the fact of the form suggested by *Wedgwood* failing to explain the presence of the radical and final *d*, makes the origin of the word doubtful, all the more from the spelling being *ui*; a combination of letters which suggests a French, rather than an Anglo-Saxon, origin. The editor, laying less stress on this than many of his predecessors, believes, notwithstanding the high authority of *Grimm*, that, word for word, the English *build* and the German *bilden* are the same.] Raise or construct.

He was perfectly correct in identifying it with a leaf-bud, from which it differs in nothing more than in being deciduous, and consisting of scales much more fleshy than in ordinary leaf-buds. In some plants, such as the tiger-lily, the leaf-buds in their usual position in the axils of leaves, acquire a fleshy consistence, and are spontaneously cast off by the stem in the state of true *bulbs*.—*Lindley, Introduction to Botany*, b. i. ch. ii. § 2.

We cannot refrain from referring to what are called *bulls*, the particular offspring of the fertile Hibernian mind. A *bull* is the exact counterpart of a witticism. Instead of discovering real relations, which are not apparent, it admits apparent relations, which are not real. 'I will make her,' says Sir Lucius O'Trigger of his mistress, 'Lady O'Trigger, and a good husband into the bargain.' . . . It was—who said, 'Mr. Speaker, I don't see why we should put ourselves to inconvenience to benefit posterity. What has posterity ever done for us?' And through the yielding planks a passage find.

Dryden.
As an instance of the arbitrary way in which words acquire their precise meaning, it may be observed that a *bullet* in English is applied to the ball of a gun or musket, while the projectile of a cannon is called a *ball*. In French, on the contrary, it is *boulet* de canon, *balle* de fusil.—*Wedgwood, Dictionary of English Etymology.*

Bulletin. *s.* [Fr.] Public announcement; especially of military operations; medical reports as to the health of public men.

Bullfighter. *s.* Human combatant in a bullfight.

So inveterate was at one time the rage of the people for this amusement, that even boys mimicked its features in their play. The miller's thumb, or *bull-head*, is a fish of no pleasing shape; it has a head big and flat, much greater than suitable to its body; a mouth very wide, and usually gaping; he is without teeth, but his lips are very rough, much like a file; he hath two fins near to his gills, which are roundish or crested; two fins under his belly, two on the back, one below the vent, and the fin of his tail is round. Nature has painted the body of this fish with whitish, blackish, brownish spots. They are usually full of spawn all the summer, which swells their vents in the form of a dug. The *bull-head* begins to spawn in April; in winter we know no more what becomes of them than of eels or swallows.—*I. Walton, Complete Angler*.

The lamprey, I believe, cannot raise itself up in the water, and I doubt whether the *bull-head* does or can.—*Ray, Correspondence*, p. 245.

Bullion. *s.* [Fr. *bullion* = stud.]

[The original meaning of the word *bullion*, *boillon*, *bilon*, was the mint or office where the precious metals were reduced to the proper alloy and converted into stamped money, from the Latin *bullia*, a seal, whence Modern Greek *βουλίων*, to seal, to stamp; *βουλίων*, the matrix or die with which coins were stamped. In this sense the word appears in our early statutes. The stat. 9 E. III. st. 2, c. 2, provides that all persons 'puissent sauvement porter à les échanges ou *bullion* de n'emie ailleurs argent en plate, vessel d'argent et toutz maners d'argent saue faux monnoie et l'esterling counterfeit,' for the purpose of exchange. In the English version these words are erroneously translated 'that all people may safely bring to the exchanges bullion or silver in plate, &c.,' which has led to the assertion that 'bullion' in the old statutes is used in the modern application of uncoined gold or silver. The 27 Ed. III. st. 2, c. 14, provides, 'que toutz marchantz . . . puissent sauvement porter . . . plate d'argent, billetes d'or et tout autre maner d'or et toutz moneyes d'or et d'argent à nostre *bullione* out à nous échanges que nous ferons ordener à nous diets estables et ailleurs pennant illoes moneyes de nostre coigne convenablement à la value.' Again, 4 Hen. IV. c. 10, 'que la tierce partie de tout la monnoie d'argent que sera porte à la *bullion* sera faite es mayles et ferlynges'—shall be coined into halfpence and farthings. In these and other statutes all trafficking in coin was forbidden, except at the *bullion* or exchanges of the king; and similar restrictions were enforced in France, where the tampering with the coin was carried to a much greater extent than in England, inasmuch as to earn for Philippe le Bel the title of *le fause monnoyeur*. Hence among the French the carrying to the *billon* their decreed money became a familiar operation of daily life, and 'porter au *billon*,' 'mettre au *billon*,' are metaphorically applied to things that require remaking. The decreed coin brought to be melted up was termed 'monnaie de *billon*,' and hence *billon* and the equivalent Spanish *vellon* were very early used to signify the base mixture of which such coin was made, or generally a mixture of copper and silver. 'Ne quis aurum, argentum vel *billonem* extra regnum nostrum deferre presumat.' (Stat. Philip le Bel in Duc. A.D. 1305.) In England the fortunes of the word have been different, and the Mint being regarded chiefly as the authority which determined the standard of the coin, the name of *bullion* has been given to the alloy composition of the current coin permitted by the *Bullion* or mint. Thus *bullion* is translated in Torriano's dictionary (A.D. 1687), 'lega, legaggio di metallo,' and traces of the same application are preserved in the Spanish reckoning in 'reals vellon,' reals of standard currency. From metal of standard fineness the signification has naturally passed in modern times to all gold and silver designed for the purpose of coinage.—*Wedgwood, Dictionary of English Etymology.*]

When the *bullion* question was forced upon the attention of parliament and the country by the manifest effects of inconvertible paper having so long been issued by the Bank of England, and still more, perhaps, by the excessive issue of country bank-notes . . . founded upon a fallacious notion that their being made payable in Bank of England paper imposed an effectual check upon their issue, . . . Mr. Ricardo took a part in the controversy that arose, and published one or two tracts on the depreciation.—*Lord Brougham, Historical Sketches of Statesmen, &c., Mr. Ricardo*.

Bullioner. *s.* Dealer in Bullion.

In this way it applies to targets; to a policeman's lantern; to the boss in the middle of a sheet of glass, &c. In other cases the meaning is, probably, connected with a threatening or lowering appearance; e.g. when applied to a small cloud portending a gale; thence the gale itself.

Bully-rook. *s.* [The German *bulderen*, *bolderen*, *poltern*, signifying 'be noisy, threaten,' separate this word from *bull*; whilst the form *buller-brook* separates it from *rook*, in the ordinary sense of the term; the meaning in the present compound being uncertain. Of a similar import with *bullerbrook* is the Dutch *bullebak*; a compound which complicates the etymology of *Bullbeggan*; which is again complicated by the Welsh *bwbach* = hobgoblin or bugbear; a word from which there is a long list of derivatives signifying 'terror, fright, scaring,' and the like, e.g. *bwbaches* = female goblin; *bwbachu* = frighten; *bwbachawl* = bugbearlike, &c.

At the same time the words *bugbear*, *bearbug* (as quoted by Todd from Sir Thomas Smith), *buggabo*, along with the following passage from Chaucer, show that the image of some animal was connected with some of these words, which seem all connected with each other:

'The humour of melancholye
Causeth many a man in sleep to cry,
For fear of beris, or of bobs blake,
Or ellis that blake buggys will him take.'

- Bungle. v. n.** [I think the etymon of this word must be *bung*; to which the addition of *l* gives a diminutive or disparaging sense; the word *bung* itself being to some extent, in the current language at least, of the same import. If so, to *bungle* means to stop in a hurried unsteady manner anything running away.] Perform clumsily.

Are you then Jesuits? Are you so for nought,

In all the Catholic depths of treason taught,

In orthodox, and solid poisoning read?

Brodie in Transactions of Royal Society*.

- Bunny. s.** [I take Mr. Wedgwood's etymon here; considering that the word, a popular but half obsolete name for an indigenous animal, is just the term to be of Celtic origin. *A priori*, however, it should be Welsh or Cornish, i. e. British rather than Gaelic. However, Mr. Wedgwood's illustrations are: Manks, *bun* = but-end, thick end; Gaelic, *bun* = root, stump. Hence, a *bunny* = rabbit is the short-tailed animal, the bobtail.] Rabbit. *Colloquial*.

The *bunting* [*Emberiza miliaria*] breaks not oats, but shells or hulls them most dexterously, as I observe, having one of them by me at this present in a cage.—*Ray, Correspondence, Letter of Dr. Lister*.

You may depend on it that the *bunting*, *Emberiza miliaria*, does not leave this country in the winter. In January 1767 I saw several dozens of them in the midst of a severe frost among the bushes on the downs near Andover. In our woodland enclosed district it is a rare bird.—*White, Natural History of Selbourne*, let. 12.

- [Instead of *bunt*, the word *bunt* is used in Somersetshire for sifting meal, whence *bunting*, the loose woven woollen texture employed in the first instance for that purpose, and then for making the flags of ships, in which latter sense it is now generally used.—*Wedgwood, Dictionary of English Etymology*.]

1. Plant of genus *Arctium*; fruit of the Burdock.

Clot burrs bringeth forth broad leaves; the stalk is divided into very many wings and branches bringing forth great burres, round like bullets or balls, which are rough all over and full of sharp crooking prickles, taking hold of men's garments as they pass by. The great burr is called in Greek *ἀκρίδιον*; in Latin, *Personata personata*, and *Arctium*. . . . The lesser burr dock is called of the Grecians *ζεύδιον*, in Latin *Xanthium*. . . . It seemeth to be called *Xanthium* of the effect for the burr or fruit before it be fully withered, being stamped and put into an earthen vessel, and afterwards when need requireth the weight of two ounces thereof and somewhat more being steeped in warme water and rubbed on, maketh the haire of the head red; yet the head is first to be dressed or rubbed in with niter, as Dioscorides writeth. The great Water burr differeth not in anything from the first kind in roots or leaves, save that the first hath its leaves rising immediately from the tuft or knop of the root.—*Gerarde, Herbal*, p. 45: ed. 1633.

Nothing teems
But hateful docks, rough thistles, kecksies, burrs,

Crabbe, *The Borough*.
Some he gave away, the rest he threw away, literally tossing and hurling it violently from him—as boys do burrs, or as if it had been infectious.—*Lamb, Essays of Elia, The two Races of Men*.

[Bur has two meanings: 1. an excrescence out of the regular surface or round the edge of a thing, as the bur of a bullet, the neck produced by the hole through which the lead has been poured into the mould; the round knob or horn on a deer's head (Bailey); the uneven projection round the edge of a hole punched or bored in a piece of metal, &c. And secondly, the hooked seed-vessel of some kinds of plants. In the former sense the word is derived from the notion of budding, the excrescence being compared to that made by the buds which form at the root of a branch. In the second sense it is derived from Fr. *bourre*, flocks or locks of wool, hair, &c., serving to stuff saddles, balls, and such like, also the down or hairy coat of sundry herbs, fruits, and flowers; also, less properly, any such trash as chaff, shales, &c. *Bourre-de-soie*, tow of silk. (Cotgr.) It, *bourre*, any kind of quilting or stuffing, shearing of cloth, also all such stuff as hay, moss, straw, chips, or anything else that birds make their nests with. (Florio.) A bur then is a seed-vessel which sticks to our clothes like a flock of wool, and is not readily brushed off. The Northumberland bur is a huskiness of pronunciation, as if the speaker had some kind of bur or flocks in his throat impeding his utterance. The primitive meaning of the Fr. *bourre* seems to be stuffing, what is put into a thing for the

BURD

purpose of puffing or swelling it out, from the Gael. *borr*, to swell; and it might also derive the sense of a knot or flock of wool from the same origin. Or it might with much plausibility be derived from Fin. *purro*, Esthon. *purro*, anything comminuted by biting, chewing, or similar action, sawdust; OHG. *uzboro*, *urboro*, sawdust. I think, however, that the former is the more probable derivation of the two.—*Wedgwood, Dictionary of English Etymology*.]

2. Rough edge thrown up in unfinished work by the graver, needle, or other tool.

The burr of varnish occasioned by the cutting of the etching needle, is carefully removed, and when any mistakes are found to have been made, a stopping mixture, as it is called, is used, generally composed of turpentine, varnish, and lamp black, and is applied with a camel's hair pencil; it speedily dries, and is as firm in its consistency as the rest of the ground.—*Foreign Quarterly Review*.

Burden of proof, in Logic, (the English rendering of the technical term *onus probandi*,) is the obligation on the part of one of two disputants to give some positive reason in favour of his view, the other side of the question being supposed, from general assent, from established usage, or from some other cause, to have a presumption in its favour.

BURE {BUOYANCY BUREAUCRACY

It is a point of great importance to decide in each case, at the outset, in your own mind, and clearly to point out to the hearer, as occasion may serve, on which side the presumption lies, and to which belongs the (onus probandi) burden of proof. . . . According to the most correct use of the term, a 'presumption' in favour of any supposition, means, that the burden of proof lies on the side of him who would dispute it. Thus, it is a well-known principle of the law, that every man (including a prisoner brought up for trial) is to be presumed innocent till his guilt is established. This does not, of course, mean that we are to take for granted he is innocent. It evidently means only that the burden of proof lies with the accusers.—*Whately, Elements of Rhetoric*, pt. i. ch. iii. § 2.

Burden. v. a. Load; encumber.

Burden not thyself above thy power.—*Ecclesiasticus*, xiii. 2.

But to sit idle on the household hearth,

In the seven bureaux seems nothing but hindrance: in Monsieur's bureau, a Loménie de Brienne, Archbishop of Toulouse, with an eye himself to the controulship, stirs up the clergy; there are meetings, underground intrigues.—*Carlyle, French Revolution*, pt. iii. b. iii. ch. iii.

[The Italian buio, dark, was formerly pronounced buro, as it still is in Modena and Bologna. . . . 'Burrhum antiqui quod nunc dicimus rufum.' (Festus in Diez.)

Old Fr. *bure*, *burel*, Sp. *buriel*, Prov. *burel*, reddish brown, russet, specially applied to the colour of a brown sheep, then to the coarse woollen cloth made of the fleeces of such sheep without dyeing. So in Polish *bury*, dark grey; *burra*, a rain-cloak of felt.

Then as the table in a court of audience was covered with such a cloth, the term bureau was applied to the table or the court itself, whence in modern French it is used to signify an office where any business is transacted. In English, from a writing-table the designation has passed to a cabinet containing a writing-table, or used as a receptacle for papers.—*Wedgwood, Dictionary of English Etymology*.]

Bureaucracy. s. [a hybrid formed after the analogy of democracy, aristocracy, &c., and giving origin to derivatives similar to theirs, as *bureaucratic*, *bureaucratical*, *bureaucratically*; and as the sort of government which it denotes is common, the word, though neither old nor frequent in the best writers, is useful, and perhaps necessary.] Government by, or influence of, officials.

As long as *burgage*-tenure representatives are only of two descriptions, they who buy their seats, and they who discharge the most sacred of trusts at the pleasure and almost as the servants of another, surely there can be no doubt in which class a man would choose to enroll himself.—*Letter of Sir S. Romilly*, Sept. 1805.

Burglary, s. Nocturnal house-robbery.

Burglary, in the natural signification, is nothing but the robbing of a house; but as it is a term of art, our common lawyers restrain it to robbing a house by night, or breaking in with an intent to rob, or do some other felony. The like offence committed by day, they call house-robbery, by a peculiar name.—*Cowell, Law Dictionary*.

Compare the villains who cut throats for bread,
Or houses fire, of late a gainful trade,
By which our city was in ashes laid;
Compare the sacrilegious *burglary*,
From which no place can sanctuary be,
And yet how little's this of villany
To what our judges oft in one day try!

Oldham, Imitation of the Thirtieth Satire of Juvenal.

They chose their councils and *burgmasters* out of the burgeois, as in the other governments of Switzerland.—*Addison*.

The influence of the stadtholders was an object of extreme jealousy to the municipal oligarchy. But the army, and that great body of citizens which was excluded from all share in the government, looked on the *burgmasters* and deputies with a dislike resembling the dislike with which the legions and the common people of Rome regarded the senate, and were as zealous for the house of Orange as the legions and the common people of Rome for the house of Caesar.—*Macaulay, History of England*, ch. ii.

Búrial, s. [A.S. *byrgels*.—the *-al* in this word has no connection with the *-al* in words like *funeral*, &c., an element of Latin origin. On the contrary, it is the representative of a class of derivational endings which are nearly obsolete, i.e. of words in *-else*, commonest in the Norse languages, e.g. *fútelse* = feeling, *inflydelse* = influence, &c.]

reasons for considering many of these cromlechs as family burying-places. Wit is like the graver's *burin* upon copper, or the corrodings of aquafortis, which engrave and indent the characters, that they can never be defaced.—*Dr. H. More, Government of the Tongue*.

The ancient goldsmiths probably were early accustomed to the use of the *burin* or kind of chisel, whose extremity is a rectangular steel bar in the shape of a lozenge. . . . The *burin* being held firmly in the hand, cuts out a small thread-like portion of the metal which is being engraved, and which varies in depth more or less according to the angle of the *burin* and the force applied to the instrument.—*Foreign Quarterly Review, Engraving, ancient and modern*, no. 1.

Burinist. *s.* One who works with the burin.

Many have been astonished at the facility of execution displayed by the early engravers, and the strength and equality which is evinced in their handling. But this ceases to occupy our attention when we reflect that the skill and practice of the goldsmith (the incipient line engraver) was constantly displayed in the beauty and delicacy of his designs upon gold or silver, and that at the very origin of the new art there were very many expert *burinists* who were at once able to apply their hands to the interesting labour.—*Foreign Quarterly Review, Engraving, ancient and modern*, no. 1.

Burlesquely. *adv.* In a burlesque manner.

Erasmus had only his counterpart here in England, which was Sir Thomas More. They both seem to be born under the same jolly influence, and the sympathy of their humour conciliated a correspondence and reconciled a friendship between them; indeed they strengthened two things very inconsistent, which were, that one of that stupid climate should be facetious, and a chancellor a droll, who dressed up all things, even death itself, *burlesquely*, and both liv'd and died in jest.—*Preface to Plutarch's M. rals*. (Ord MS.)

Upon the heads of all.

Milton, Samson Agonistes, 1650

Imprison'd fires, in the close dungeons pent,
Roar to ret loose, and struggle for a vent,
Eating their way, and undermining all,
Till with a mighty burst whole mountains fall.

Burthen. s. [A.S. *byrðen*.] The more correct form of *Burden*.

Bury. *v. a.* [A.S. *byrgan*, *byrigean*, *byrian*, *birgan*.]

1. Inter; put into a grave: (with or without funeral rites).

Among our Saxon ancestors, the dead bodies of such as were slain in the field were not laid in graves; but, lying upon the ground, were covered with turves or clods of earth; and the more in reputation the persons had been, the greater and higher were the turves raised over their bodies: this some used to call biriging, some beorring of the dead; all being one thing, though differently pronounced, and from whence we yet retain our speech of *burying* the dead, that is, hiding the dead.—*Verstegan*.

Slave, thou hast slain me!

If ever thou wilt thrive, *bury* my body.

Shakespeare, King Lear, iv. 6.

When he lies along,

In the Bronze period, cremation seems to have alternated with the simple *burying* of the dead, though the former seems to have been the most general. It is, however, certain that different tribes observed different customs in this particular. In Mecklenburg and Luneburg, for example, burying the dead without burning appears as the exception. In both cases, a kind of foundation seems to have been made, which was formed of the stones strewed thickly around in the fields.—*Kemble, Hore Ferales*, introd. p. 43.

Burying-place. *s.* Place appointed for the sepulture of dead bodies.

They buried him, between Zorah and Bahtad, in the *burying-place* of Manoaah his father.—*Judges*, xvi. 31.

The place was formerly a church-yard, and has still several marks in it of graves and *burying-places*.—*Spectator*, no. 110.

The characteristics belonging to the graves of this period are not nearly so clear and definite as those attending the former. The grave, as regards its form, has only the appearance of a mound of earth, superimposed upon the true *burying-place*, circular in form, and varying very greatly in height according to circumstances.—*Kemble, Hore Ferales*, introd. p. 44.

Bush. *s.* [see extract.] Lining of harder material let into an orifice to guard against the wearing effect of friction.

[The *bush* of a wheel is the metal lining of the nave or hollow box in which the axle works. Dutch, *busse*, a box, *busken*, a little box; Danish, *bøsse*, a box, a gun; German, *büchse*, a box, *rad-büchse*; Swedish, *hjul-bosse*, the bush of a wheel; Scotch, *bush*, box wood; to *bush*, to sheath, to enclose in a case or box. Provincial forms of the word are *boistia*, *boissa*, whence the diminutives, Old French, *boisteau*, *boisseau*; Latin (A.D. 1214), *bustellus*, a box for measuring, a bushel.—*Wedgwood, Dictionary of English Etymology*.]

Bush. *s.* [see Busk = bush, *s.*]

1. Thick shrub.

Eft through the thick they heard one rudely rush,
With noise whereof, he from his lofty steed,
Down fell to ground, and crept into a *bush*,
To hide his coward head from dying dread.

Spenser, Faerie Queen.

The poller, and exactor of fees, justifies the resemblance of the courts of justice to the *bush*, whereunto while the sheep flies for defence from the weather, he is sure to lose part of the fleece.—*Bacon, Essays*.

Her heart was that strange *bush*, whose sacred fire,

Religion did not consume, but inspire

Such piety, so chaste use of God's day,

That what we turn to feast, she turn'd to pray.

Donne.

With such a care,

As roses from their stalks we tear,

When we would still prefer them new,

And fresh as on the *bush* they grew.

Waller.

The sacred ground

Shall weeds and poisonous plants refuse to bear;

Each common *bush* shall Syrian roses wear?

Dryden, Virgil's Eclogues.

2. Bough of a tree fixed up at a door, to show that liquors are sold.

If it be true, that good wine needs no *bush*, 'tis true that a good play needs no epilogue.—*Shakespeare, As you like it*, epilogue.

3. Wild country in general. (That this meaning was originally attached to tracts covered by wood, and, as such, uncultivated, is beyond doubt. At present, however, it may apply to districts remarkable for nothing so much as their want of trees: such being the case in the parts north of the Cape of Good Hope settlements, and in a large part of Australia. The word is directly of colonial, remotely of Dutch, origin: Dutch being the language wherein the term is most generally used for a wild country; and the Dutch colonists of the Cape the particular introducers of it. It is probably from the Dutch *bosjeman*, rather than from the English combination *bush* + *man*, that we get the word *bushman* in its ordinary sense, i.e. as a term denoting an inhabitant of the barest and barrenest parts of the Cape. It is, however, a geographical, rather than a common, term; the division of mankind to which it applies being a section of the Hottentot class: the native name is

1. As in the proverb, 'One beats the bush, while another catches the birds.' Applied to cases where the labour bestowed upon any object falls to the share of one partner, whilst the results are monopolized by another; the metaphor being taken from *fowling*. *Colloquial*.

2. Approach, anything in a roundabout manner, instead of going directly to it; the metaphor being taken from *hunting*. (The verb here is often neuter, giving *Beat about the bush*.) *Colloquial*.

For a refinement upon this explanation, see Bushfighting and Bushment.

Bush. *v. n.* Grow, serve, or show as a bush.

Bush. *v. a.* Surround, cover, or protect with bushes.

I cannot but applaud the worthy industry of old Sir Harbottle Grinstone, who from a very small nursery of acorns, which he sowed in the neglected corners of his ground, did draw forth such numbers of oaks of competent growth, as being planted about his fields in even and uniform rows, *bushed* and well watered till they had sufficiently fixed themselves, did wonderfully improve both the beauty and the value of his demesnes.—*Evelyn, Sylva*, b. i. ch. ii. (Ord MS.)

Bushbeater. *s.* One who beats the bush in any of the senses of that combination. (In the following extract it is used as in *sporting* = one who beats bushes to rouse the game.)

In time, however, Ferdinand sufficiently rallied to recover his reputation with the keeper, who, from his first observation, began to wink his eye to his son, an attendant *bush-beater*, and occasionally even thrust his tongue inside his cheek—a significant gesture perfectly understood by the imp.—*Disraeli the younger, Henrietta Temple*, b. ii. ch. vi.

Bushel. *s.* [N.Fr. *buschel*; *boisseau*; L.Lat. *bussellus*.]

1. Measure containing eight gallons.

Near Creek, in a *bushet* or wood on a hill, not far from the way side.—*Ray, Remains*, p. 251.

We rode through a *bushet*, or common, called Rodwell Hake.—*Ibid.*, p. 153.

Bushfighting. *s.* [Though, word for word, this is a genuine grammatical compound of Bush and Fighting, the exact import of neither element is absolutely beyond doubt. This is on account of the complication introduced by the word *Am-*

bush, its congener. Its meaning, especially when connected with any word denoting a fight or contest, is closely allied with those of the word Bush denoting the quarters of an enemy; yet without being identical. And the same connection between the same words exists in respect to their derivation; inasmuch as *ambush*, *ambuscade*, the French *bois*, and several other allied words, are all originally from the root *b-sh*. In Bushment we probably have little more than *ambushment* in another shape; just as we have *broider* from *embroider*, *body* from *embody*, and many other words beside. Hence, Bushfighting may mean anything between actual warfare with ambuscades and mere verbal circumlocution, hesitation, and avoidance of the main topic of

[The foregoing modes of spelling the word 'Bush and Busk' indicate a double origin: from the Icelandic *buskr*, a tuft of hair, bush, thicket (*buski*, a bunch of twigs, besom); and from the French *bousche*, *bouche*, a whip, tuft, whence *bouchon*, a tavern bush, *boucher*, to stop, to thrust in a *bouche* or tuft of hemp, tow, or the like. *Bouchet*, a bush, bramble.—*Wedgwood, Dictionary of English Etymology*.]

Busk. v. a. [This word, in respect to the questions connected with its form, and the explanation of the final *s + h*, is, in the eyes of those who uphold the importance of the Scandinavian, Norse, or Danish element in English, one of the most interesting in the language. Why it is this, may be seen from the following doctrine, taken along with certain facts connected with the Reflective Pronoun. Jamieson derived this verb from the Icelandic *bua* = prepare, dress; which may be, and often is, followed by the reflective pronoun *sik* = self; upon which Wedgwood remarks (*Dictionary of English Etymology*, in voce) that 'it is singular that, having come so near the mark, he fails to observe that *busk* is the simple adoption of the deponent form of the Icelandic verb *at buast*, for *at buasc*, contracted from the very expression quoted by him 'at *bua sik*.' This identity of the three forms, *bua sik*, *buasc*, and *buast*, is not only beyond all doubt, but is one of the most generally admitted facts in Scandinavian philology; wherein the following processes are verified in such a manner as to give us not only the special explanation of certain forms in Danish, Swedish, and Icelandic, but something like a general exhibition of the way in which an ordinary passive or deponent may be developed out of a middle voice; the middle-voice itself having originated in the combination of an active verb and a reflective pronoun.

In the Norse language every Transitive Verb is in the same predicament with *bua*; i.e. (1) it can govern a Reflective Pronoun in the objective case which follows it, as

BUSK

halla sik = call (one's) self; (2) it can coalesce into one word with that Pronoun, the *i* being elided and the number of syllables lessened, as *buasc*, *hallasc*; (8) it can change the *sc* into *st*, as *buast*, *hallast*; (4) it can lose the final *t*, so that words like *kallas* (or, with a change of vowel, *kalles*) result; in which case the original reflective and pronominal nature of the final consonant is so thoroughly concealed, that, if it were not for the history of the transformations being known to the minutest details, the real nature of the element in question would be either doubtful or obscure. In respect to their import, these forms are treated as Passives; and that, not only in Danish and Swedish, but also in the Icelandic grammars; and, in the later forms of speech, this is what they generally are. Still, even in respect to meaning, their more immediate origin as Middles and their remoter origin as Reflectives are manifest. In the Icelandic of the Edda distinctions may be found between such forms as *han var namnrad* = he was named (a true passive), and *han namdist* = he named, or called, himself (a true middle); distinctions which become less clear as the language becomes modern. Again, as *sik* may mean not only (one's) self, but each other, its construction is often reciprocal; the result of which is a number of Deponent Verbs, such as *slaa* = fight, *brötta* = wrestle, from *slaa* + *sik*, *brötta* + *sik* = strike or grapple with one another.

Of the forms, that in *sc* is characteristic of the oldest Icelandic and the oldest Norwegian. In the later Icelandic, *-st* is the sign of the Passive voice; and in the Danish and Swedish the still more altered forms in *-s* alone. If all this gives us the *-sk* in the word before us, the phenomenon is a curious one. In the first place, it gives us what is wholly wanting in the Anglo-Saxon, a Passive, Middle, or Deponent Verb; and, in the second place, it supplies what is also wanting, the Reflective Pronoun by means of which it is made: for, although we have in the words *him* and *self*, the equivalents to the Latin *illum* and *ipsum*, the representative of the true reflective pronoun *se* is wanting; a point upon which more will be written under Self. Nevertheless, it is doubtful whether *Busk* be a word of the kind in question; i.e. an English word which has grown out of a Norse middle voice; itself deduced from the combination of a verb with a pronoun almost unknown in Anglo-Saxon.

The general reasoning against this view will be given in the Preface. It consists chiefly of the presumptions against any given words being of Norse origin; presumptions which, in the mind of the present writer, are very great. But as the opposite doctrine is held by many respectable authorities, to whom the influence of the Danish or Norse language upon our own appears to have been considerable, it is necessary in the present place for the objection to be more specific.

Now a little enquiry will show us that the date of the Danish invasions is scarcely the date of the origin of the Norse form in *-sc*.

The earliest specimens of the Norse, with the exception of a few pieces of verse which, in respect to their form, we have no

reason to believe are older than the prose in which they are quoted, are no earlier than the time of Henry II. in England; a time at which, with the exception of Shetland and Orkney, we may fairly presume that no Norse was spoken in Great Britain, certainly none in England. In these however the evolution of the forms which have been under notice is only beginning. Thus:

Sik, sc, st, or s, the pronominal element in the combinations which have just been considered, though a reflective pronoun, is in the first instance the reflective pronoun of the *third person only*. Hence, before it can become incorporated with the verb, and serve as the reflective for *all three persons*, certain preliminary changes are necessary. The natural Reflectives in English for the First Persons are, 'I strike (*my*)self; we strike (*our*)selves;' wherein the Pronoun which is governed, or the object, is in the same Person as the Pronoun which governs, or the subject. In other words, they are names of the same individual: and of the two facts, namely, that of A giving a blow, or being the striker, and receiving a blow, or being the person struck, equal notice is taken. By thinking however less of A in his character of agent, and more of him in his character of patient, we lose sight of the necessity of this agreement (i.e. that of Person between the two Pronouns); and a series of changes, different in detail according to the language, takes place. Sometimes the possessive element (e.g. *my*) is omitted, and the import of what remains (e.g. *self*) becomes indefinite. In general, however, the Reflective Pronoun of the Third Person, as being the one which is most used, supersedes the other two. It does so in some of the German provincial dialects, where *sich* is used with the First and Second Persons of both numbers. It does so in Greek where not only *εαυτο* can be found for *ἐμὲ* and *αὐτό*; but where *ἐαυτο* is found for *ἐμὲ* and *αὐτό*; and it did so in the later Icelandic and its derivatives. In short, it is supposed to do so in such expressions as *bush thee, I bushed*, &c. But all this implies so many stages in the history of the combination: the first, in which it is purely Reflective; the others, wherein it is partially Reflective; but, in the main, Middle with a Reciprocal, Deponent, or Passive sense. Now in the earliest Icelandic of which we have specimens, the Icelandic of the Edda, which, whatever may be the antiquity of its matter, is in point of form the Icelandic of the time subsequent to the Norman conquest of England, and the date of the extinction of the Danish in England, the combination is only in its *first* stage, the Edda giving forms like *hugdomk* = *hugd + mik* (*mik* = me), wherein the supremacy of the Third Person is scarcely beginning to show itself. Yet forms like *bush*, supposing the *s-k* to give the Reflective Third Person, imply that it was supreme some two centuries earlier. This is not impossible; nor is it impossible that with the element *sik*, and the same habits of combining it with the Verb and letting it prevail against the other two, the development of a Passive or Deponent may have begun earlier in the Norse of England than in that of Scandinavia. Still, as the presumptions are against it, it is suggested that the foregoing details, details

which have never been fully considered, constitute an objection to the current doctrine. So late as the beginning of the thirteenth century, this was not the case. On the contrary, we find in the Norse of the Edda forms equivalent to *bua mik* = prepare (*my*)self, and *bua þik* = prepare (*thy*)self; forms which, if they were predominant in the Danish of the time of their invasions of England, are, to say the least, unlikely elements of the word in question.

Still, the main argument against the view here combated lies less in the minute history of the present Norse or Scandinavian Passive, than in the general fact of the Danish having had but little influence on the literary English; a point upon which there are extreme and opposite opinions, those of the present writer being adverse. Upon this, however, more will be found in the Preface.

The doctrine now suggested is, that Busk is much such a word as *brace* or *gird*, i.e. a word applied to denote preparation from the settling of some part of the dress; in which case a *bush* is the ordinary Substantive (like *girdle* and *brace*), and *to bush* is to be busied about it. If so, all such Participles as *bowne*, *boon*, *bound* = be on the way for a place, are connected, not with the element *bu-*, but with the root of *bow* = bend.]

And knew all niceties of the sock and buskin;
And no Venetian audience could endure a
Song, scene, or air, when he cried 'seccatura!'

Byron, Beppo, xxxi.
[Italian, *bolgia*, *bolza*, Grisons, *bulscha*, *buscha*, a budget or leather wallet; Spanish, *bolza*, a bag, purse, exchange. Hence, with the common change of an *l* for an *r* (as Spanish, *peluca*, French, *perruque*); Italian, *borsa*, *borsia*, *borza*, French, *bourse*. From the Italian form *bolza* seems derived *bolzaachini*, Spanish, *bolzaquin*, buskins, originally signifying bags of skin into which the feet were thrust, as Spanish, *bolza*, bag lined with furs or skins to keep the feet warm. (Neumann.) The same change from *l* to *r*, as in *bolza*, *borsa*, gives Italian, *borzaachini*, Dutch, *broesken* (French, *brodequin*), English, *buskin*. In

like manner it seems that the original meaning of *boot* was a leathern bag, as in Spanish, *bota*, which signifies both a leathern bag to carry wine, and also boot, a leathern covering for the leg and foot. Dutch, *bote*, *boten-schoen*, pero, calceus rusticus e crudo corio. (Kilian.)—*Wedgwood, Dictionary of English Etymology.*

Shakespeare, Henry IV. Part I. v. 1.

Buss. s. Colloquial for Omnibus.

Buss. s. [from German, *busse*; Dutch, *buyse*.] Boat for fishing.

It was a sea most proper for whale-fishing: little busses might cast out nets for smelts and herrings. —*Bishop Hacket, Life of Archbishop Williams, p. 82: 1693.*

If the king would enter towards building such a number of boats and busses, as each company could easily manage, it would be an encouragement both of honour and advantage.—*Sir W. Temple.*

Buss. s. [from Lat. *basium*; a derivation which at the first view suggests the propriety of spelling it with a single *s*. By so doing, we not only favour the correct notion of its origin, but distinguish it from *buss*, meaning a kind of boat.

The same applies to *Bus* = Omnibus.

Of the Verb the pronunciation is uncertain; the final *s* being sometimes pronounced with its ordinary sound, and sometimes as *z*. The latter power is strictly grammatical, inasmuch as it is a rule that Substantives ending in a sharp, or surd, mute may change it into a flat, or sonant, one, and become Verbs: as *grease*, *greaze*; *use* pronounced *uce* and *use* pronounced *uze*, along with others. Hence the distinction between *bus* = a *hiss* and *bus* (sounded *buz*) = to *hiss*, is probable. At the same time the principle of attempting a distinction between *bus* = to *hiss*, and *buzz* = to make a buzzing sound, has a tendency to keep the pronunciation of the Verb and Substantive alike. Upon the whole, however, it is best to use the double *s*. This is because English spelling is little more than a system of orthographical expedients. Now, the common method of showing that a vowel is short, is to double the consonant which follows it, whether actually sounded, which is rarely the case, or not. With monosyllables this is hardly necessary; and if *buss* were one of the uninflected parts of speech, an adverb, a preposition, or a conjunction, the single *s* might suffice, as it does with *but*. The case is altered, however, when the word is a Substantive or a Verb; inasmuch as out of these may be evolved plural numbers or participles, such as *buss-es* or *buss-ing*. In this case a syllable is added; and, if the spelling were *buses* or *busing*, there would be the danger of the first syllable being sounded long, i.e. like the second

syllables in *a-buses* and *a-busing*. Hence, the double *s*, in spite of the reasons to the contrary derived both from the derivation and the principle of distinguishing between words sounded alike, is preserved. For further application of this principle, see Butte.] Kiss; salute with the lips.

Thou dost give me flattering *busses*.—By my troth, I kiss thee with a most constant heart.—*Shakespeare, Henry IV. Part II. iii. 4.*
Some squire perhaps you take delight to rack,
Who visits with a gun, presents with birds,
Then gives a smacking *buss*.—*Pope.*

Buss. v. a. [see preceding entry.] Kiss; salute with the lips. (Used figuratively in the extracts.)

Yond towers, whose wanton tops do *buss* the clouds,
Must kiss their feet.

Thy knee *bussing* the stones; for in such business,
Action is eloquence. —*Id., Coriolanus, iii. 2.*

Bust. s. [see Busto.] Sculpture representing the upper portion of the human figure, usually terminating with the chest.

Agrippa, or Caligula, is a common coin, but a very extraordinary *bust*; and a Tiberius, a rare coin, but a common *bust*.—*Addison, Travels in Italy.*
Ambition sigh'd: she found it vain to trust
The faithless column, and the crumbling *bust*.—*Pope.*

And Juan, puzzled, but still curious, thrust
His other arm forth—Wonder upon wonder!
It press'd upon a hard but glowing *bust*,
Which beat as if there was a warm heart under.
—*Byron, Don Juan, xvi. 221.*

Bustard. s. [see last extract.] Bird of the genus *Otis* so called: (the name applying to two species, the larger and the smaller bustard; the former of which is certainly, the latter probably, extinct in the British Islands).

His sacrifices were phenicopters, peacocks, *bustards*, turkeys, pheasants; and all these were daily offered.—*Hakewill.*

struthio), an ostrich, *avutarda*. (Diez.) Portuguese,

My *bustle* now. How much beer did you give the
officers? Mind you take care of every thing while
I am gone.—*Marryat, Snarleygown, vol. iii. ch. xiii.*

Bustle. s. [?] Tumult; hurry; confusion.

She plumes her feathers, and lets grow her wings,
That, in the various *bustle* of resort,
Were all to ruffled.

Such a doctrine made a strange *bustle* and disturbance

Southern, Oroonoko.
—*Christchurch* was up in arms; and though that
college seems then to have been almost destitute of
severe and accurate learning, no academical society
could show a greater array of orators, wits, politicians,
bustling adventurers who united the superficial
accomplishments of the scholar with the manners
and arts of the man of the world.—*Macaulay, Essays, Sir W. Temple.*

The harbour was crowded with masts and straggling
prows and uncouth sails; . . . while in the streets
might be seen men of all languages and all dresses,

bustling Greeks, and haughty Italians, . . . and
Indians, all gay with their national costumes.—*Sharpe, History of Egypt, ch. xiii.*

Busto. s. [Italian.] Statue. See Bust.

[The *bust* is properly the body of a man, the trunk without
arms or legs, then a statue representing the head
and upper part of the trunk. The word *bust* was
used in the North of France in the same sense.

'Le *bust* de St Saulve en la chaise du dit Saint
et Saint Superius sont en bon état.' (Hécart. A.D.
1776.)

Both *bust* and *buse* were then used in the sense of a
body garment, a garment closely fitting the body,
and as this was supported by a stiff bone or steel in
front, the word *bust* has ultimately been confined
to the piece of bone, wood, or steel in the front of a
woman's stays or stomacher. French, *bu, bust, buste*,
the whole bulk or body of a man from his face to his
middle; *buc, buse, bust*, the long small or sharp-
pointed and hard-quilted belly of a doublet. (Cot-
grave.) Italian, *busto*, a bulk or trunk without a
head, a sleeveless tunic or doublet, also a *bust*.

vestibule supported with pillars, with some antique
bustoes in the niches.—*Ashmole, Antiquities of Berks-
shire, iii. 115.*

The *busto* moulders, and the deep-cut marble,
Unsteady to the steel, gives up its charge.

heart of every reasonable creature, that no man
would hope to govern a society, without regard to
those principles.—*Addison, Freeholder.*

Freely welcome to my cup,
Could'st thou sip and sip it up. —*Lord Salisbury,*

And the music-stirring motion of its soft and *busy*

And wake, and find the phantom Pain, whom in
its place they greet.

from Addison a critical preface to the Georgics.—*Macaulay, Essays, Life and Writings of Addison.*

Busybod. s. Vain, meddling, fantastical person.

of all persons of condition in the whole town.—*Spectator, no. 437.*

Walker was treated less respectfully. William
thought him a *busybod* who had been properly
punished for running into danger without any call
of duty, and expressed that feeling, with character-
istic bluntness, on the field of battle. 'Sir,' said an
attendant, 'the Bishop of Derry has been killed by a
shot at the ford.' 'What took him there?' growled
the King.—*Macaulay, History of England, ch. xvi.*

Finally, the story of French gold having been
used, not, indeed, to perform the impossible feat of
bribing our ambassador's surrender of colonies, but
to gain over his employers, had been imputed by an
idle *busybod*, called Dr. Musgrave, sometime before
Junius took up the slander.—*Lord Brougham, Statesmen of the Time of George III.*

Busybodism. s. Habit or character of a *busybod*.

The most common effect of this mock evangelical
spirit, especially with young women, is self-inflation
and *busybodism*.—*Coleridge, Table Talk.*

Busysless. adj. At leisure; without busi-
ness; unemployed.

These sweet thoughts do even refresh my labours;
Most *busy-less* when I do it.

Shakespeare, Tempest, iii. 1.

[So stands the text in the previous edi-
tions; giving us not only the word under
notice, but Shakespeare as the authority for
it. The most, however, that can be said
upon this last point is, that it is a *probable*
Shakespearean term. All that is *certain* is
that it is a conjecture of Theobald's; a
conjecture which has probably been ap-
proved oftener than condemned. Yet, as a
derivation, it is faulty. The proper use
of *-less* is to stand as an affix to a substan-
tive, denoting the absence of the character
which that substantive suggests. *Noise-
less* means 'without noise,' and the strictly
grammatical compound meaning 'without
business' is the awkward word *business-
less*; there being not only no such substan-
tive as *busy*, but a good reason against
coining one, viz. the fact of *-y = A.S. -ig*,
being a characteristic adjectival ending.]

Busyness. s. [In origin the same as Bu-
siness; in meaning different. Different
also, in sound. The present word, de-
noting simply the attribute suggested by
busy, is a trisyllable in which the middle
vowel should be heard. In the other
compound (i.e. *business* = affairs, employ-
ment, &c.) the pronunciation is *business*.
As a synonym for this latter word the
compound under notice is obsolete. As a
modern compound its meaning ap-
proaches *Busybodism*; as may be seen
from such a sentence as '*Busy-ness* (i.e.
excess of active interference) is a bad
quality in *business*.' Should the word be
found necessary it may be conveniently
spelt with a *-y*.] Attribute suggested by
Busy. *Obsolete.*

BUT

And right as dranes doth nought
But drynke up the hony
Whan been with her busynes
Han brought it to hepe,
Right so fareth freres
With folk upon erthe.

Langlande, Piers Plowman's Crede.

But. conj. [A.S. *bute*, *butan*; itself a compound, of which the elements are the *b*, as in *be-side* or *be-sides*, and the *ut* of *out*. For a triple compound into which the same element (-*b*-) enters, see A baft. In Low German there is the corresponding form *binnen* = within, inner, or internal. The doctrine propounded by Horne Tooke, that the first element is the imperative mood of the so called substantive verb, is only noticed because it still finds numerous adherents, and because it needs special condemnation.] Unless.

Ah me! said Paridell, the signs be sad;
And, *but* God turn the same to good soothsay,
That lady's safetie is sore to be drad.

Spenser, Faerie Queen, lii. 8. 50.

I must wait
And watch withal; for, *but* I be deceiv'd,
Our fine musician groweth amorous.

Shakespeare, Taming of the Shrew, iii. 1.

To the notion of 'outness,' or 'externality,' suggested by the etymology, all the secondary meanings may be referred; the chief difficulties connected with the word being, not so much the etymological origin of a given signification, as the grammatical form in which that signification is conveyed: in other words, it is often difficult to say what the word *But* is, as a Part of Speech.

It is generally a Conjunction, often a Preposition, sometimes an Adverb: whilst, in many instances, its construction is equivocal or ambiguous: e.g. it may be a Conjunction, or it may be something else. Upon this, however, more will be said under the next entry. Of course too, like every other particle in the language, it may be a Substantive. We may say, 'None of your *buts*,' i.e. none of your objections expressed by the word *but*; just as we may say, 'None of your *ifs*,' i.e. doubts expressed by that particle. See remarks on *but yet*; see also *But*, v. n.

Bearing in mind the fundamental notion of 'exclusion,' we shall find that the commonest use of *But*, as a clear and undoubted conjunction, is to introduce a second proposition, in which some exception is taken to the first; the first being one of a general character. From this the second *excludes* something; and by so doing limits it. It admits, however, all that it does not exclude. Hence, wherever we find the Conjunction *But*, we find (1) two propositions, (2) one which is more general than the other, and (3) one in which this generality, though admitted up to a certain point, is objected to and limited.

It is true that all money is wealth; (*but*) I deny the converse . . . that all wealth is money.—*Whately, Logic*, ii. 2, 3.

When two or more things are connected by resemblance or analogy they will frequently have the same name. Thus a blade of grass or the contrivance in building called a dovetail are so called from their resemblance to the blade of a sword, and the tail of a real dove. (*But*) two things may be connected by analogy, though they have in themselves no resemblance; for analogy is the resemblance of ratios (or relations): thus, as a sweet taste gratifies the palate, so does a sweet sound gratify the ear; and hence the same word *sweet* is applied to both, though no flavour can resemble a sound in itself. So, the leg of a table does not resemble that of an animal; nor the foot of a mountain that of an animal: (*but*) the leg answers the same purpose to the table, as the leg of an animal to that animal; the foot of the mountain has the same situation relatively to the mountain, as the foot of an animal to the animal.—*Ibid.* iii. 810.

The parentheses in the preceding extract

BUT

are the editor's, and inserted in order to show the distinctness of the propositions."

Upon this limiting power one of the notices of the previous editions is founded: viz. *But*, a 'particle which introduces the minor of a syllogism.'

If there be a liberty and possibility for a man to kill himself to-day, then it is not absolutely necessary that he shall live till to-morrow; *but* there is such a liberty, therefore no such necessity.—*Bishop Bramhall, Against Hobbes*.

God will one time or another make a difference between the good and the evil. *But* there is little or no difference made in this world; therefore, there must be another world, wherein this difference shall be made.—*Watts, Logic*.

The major premiss is, of course, the more general proposition, which is in part admitted, and in part objected to.

If this more general proposition were always *explicitly* exhibited, the construction of *But* would be simple enough. Instead however of this being the case, it is frequently only implied or suggested; and then it is often a matter of difficulty to determine what that general proposition really is. It is often involved in a long and unconnected context; indeed, at times it is only suggested or dimly shadowed out. Thus:

If every increase of population is desirable, some misery is desirable; *but* no misery is desirable; therefore some increase of population is not desirable.—*Whately, Elements of Logic*.

Here the proposition which *but* refers to is only hinted at.

Again, in the very first proposition of Euclid we find:

Because the point A is the centre of the circle BCD; therefore AC is equal to AB. And because the point B is the centre of the circle ACE; therefore BC is equal to AB. *But* it has been proved that AC is equal to AB; therefore AC BC are each of them equal to AB. *But* things which are equal to the same thing are equal to one another, &c.

Here, *but* means: 'this is the place for a fresh part of the demonstration; *but*, as it has already been either given or assumed, no notice need be taken of it.'

The same applies to

Must the heart, then, have been formed and constituted, before the blood was in being? *But* here again, the substance of the heart itself is most certainly made and nourished by the blood, which is conveyed to it by the coronary arteries.—*Bentley*.

This means that from the preceding train of reasoning a presumption has been established in favour of the heart having been older than the blood, as the illative conjunction *then* sufficiently shows. To this presumption (a general *prima facie* view) the *but* conveys an exception; showing that the nutrition of the heart itself had been excluded from the consideration, i.e. laid out of it.

In Whately's Rhetoric (and from the works of that influential writer, the illustrations have been taken almost at random) two successive sections *begin* with this word:

But in the second place, not only does a regard for Energy require that we should not use terms more general than are exactly adequate to the objects spoken of, but we are also allowed, in many cases, to employ less general terms than are exactly appropriate.—*Whately, Elements of Rhetoric*, pt. iii. ch. ii. § 2.

But to proceed with the consideration of Tropes: the most employed and most important of all those kinds of expressions which depart from the plain and strictly appropriate style,—all that are called by Aristotle, *Xena*,—is the Metaphor, in the usual and limited sense; viz. a word substituted for another, on account of the resemblance or analogy between their significations.—*Ibid.* § 3.

Here the word applies to something said many sentences before, in which both Energy and Tropes were spoken of more generally, whereas they have now to be spoken of more particularly.

This shows that the conjunctive cha-

racter of *But* is obscure in proportion as the second proposition is implicit and inferential and clear. It is eminently so in such a sentence as the following from Bacon (quoted by Whately):

Men imagine that their minds have the command of language; (*but*) it often happens that language bears rule over their minds.

Here the two propositions form two independent sentences; the second requiring nothing from the first except 'men' the antecedent to the word 'their,' which is easily supplied. The same is the case with the dictum of Dr. Johnson:

There are objections against a plenum and objections against a vacuum; (*but*) one of them must be true.

In

Many are called; (*but*) few chosen, the second clause is not so quite independent; inasmuch as it requires the 'are' from the first to make it grammatical. The following from Swift is less explicit still:

Our wants are many, and grievous to be borne, *but* quite of another kind.

Here, in order to make 'quite of another kind' into a proposition, we must supply what precedes; not only 'are,' the copula, but 'our wants,' the subject.

The clearness, then, of the construction is susceptible of degrees; the measure being the amount of matter required to expand a complex and elliptical pair of propositions into two independent and complete ones. When one of these is little more than a matter of inference, or when (as in the extracts from Whately where *But* begins a section) it is not only inferential but placed in a different part of the work, the obscurity approaches its maximum, which it reaches when, in addition to these elements of uncertainty, we get elliptical expressions, along with other obscurities of which notice will be taken under the Prepositional and Adverbial powers of the word under consideration, which notices form the complement to this criticism.

Under the present head it is enough to state that the exception taken by *But* may be *strengthened*. This is done by adding a second particle, such as *yet*, *nevertheless*, *rather*; the result being a combination which requires analysis.

The first point which strikes us in respect to them is, that the second word, whatever it may be, has practically much the same import as the word *But* itself. This is because while *But* simply denotes the existence of an exception or limitation, the superadded word indicates the manner or mode in which it is made. *Rather*, for instance, indicates a comparison with some other alternative: *nevertheless*, a certain presumption in favour of the opposite view. And so on with the rest.

The next point is, the fact of this expression of *modality* being Adverbial rather than Conjunctive; the Adverbial character being eminently clear and evident in such words as *rather*, *instead*, e.g.

This is not as you suppose;

(*but*.)

Rather, the contrary.

Here, *rather* = more preferably, more readily, more easily, or the like.

Again,

Don't do this;

(*but*.)

Instead, do what I advise.

Here, for *instead*, we may write *in place of what you contemplate*.

At the same time the Adverbial character changes with each word; and, when we get

But
But

BUT

to such as *yet, nevertheless*, the apparent grammatical construction gives us little more than either one Conjunction strengthened by another, or a tautology; one construction passing into the other imperceptibly.

Then let him speak, and any that shall stand out shall hear his voice plainly; *but yet* in extreme sharp and exile, like the voice of pupp, and yet the articulate sounds of the words will be confounded.—*Bacon, Natural and Experime History.*

But yet, madam—
I do not like *but yet*; it does allay
The good precedence; lie upon *but yet*!
But yet is as a gaoler to bring forth
Some monstrous malefactor.

Shakespeare, Antony and Cleopatra, ii

It is clear that in each of the preceding extracts we may omit either of the two words *but* and *yet*. If *so*, and if one be conjunctival rather than adjectival, it is clear that, when one is eliminated, we have either (1) two propositions connected with each other by means of a Conjunction *between* them, or (2) one complex proposition in which the one clause contains and implies an intermediate Conjunction *understood* from the context. Hence, Conjunctions take the guise of Adverbs, and Adverbs of Conjunctions. For more on this see *But adv.*

With *but if* we have really two Conjunctions; unless, indeed, were fine upon the construction and say that the only true Conjunction is *if*, and that *but* is an Adverb showing that the hypothetical connection between the two clauses of the sentence to which it belongs partakes of the nature of an exception or limitation to something implied in something elsewhere. If so, it is modal and adverbial rather than purely conjunctival. Still, few would say that in such combinations *but* is an Adverb. The right view probably is the following, viz. that when we meet with two true Conjunctions (e.g. *but if*) we have not two but four propositions, or rather two pairs, i.e. two (one pair) implied by *if*, and two (one pair) implied by *but*. A third pair is suggested by *then*; but upon this it is not necessary to enlarge.

(1) a. Provided that A is B,

b. *then*
If is C.

(2) a. You have argued as if this were not the case,

b. *but*
If it is, &c., then, &c.

Such is the ordinary construction in such combinations as 'If it prove fine, I shall go out; (*but*,) if it rain, I shall stay at home.' The following extract, however, gives us specimens of an obsolete combination = unless.

I wol breake thy head *but if* thou get thee hence.
Udall, Flowers from Latine: 1533.
No living aide for her on earth appeares.
But if the heavens helpe redresse her wrong.
Spenser, Faerie Queene, iv. 7, 23.

The following is, probably, an imitation of the Greek idiom by which *ὅν . . . ἀλλὰ* = *ὅν μόνον . . . ἀλλὰ καί*. At any rate, the full English would be: 'for it does not only most commonly safeguard the man; *but also* always,' &c.

Courage is the greatest security; for it does most commonly safeguard the man, *but* always rescues the condition from an intolerable evil.—*Jeremy Taylor, Rule and Exercises of Holy Dying, iii. 8.*

preceding extracts from the
tion verify the statement made

But, conj., that in every case we
write *but only* in full, and then

ther particle; the sense remaining
one except so far as, if we omit *but*,

we get two clauses of one proposition connected by an Adverb expressing the manner or mode of their connection; and, if we omit *only*, we get two propositions connected by a Conjunction but without any modality, i.e. without learning whether the form which remains gives us the *only* connection. In most cases it does. Hence, *only* is a fair equivalent for *but* = *but only*, minus *only*. But its meaning is given by the general context, rather than by the text of the extract itself.

Thus, in the extract from Dryden, it is by no means certain from the text itself that it is *only* to his friends that Ulysses is formidable. It might have been that Ulysses was a bad ally, because he was *equally* dangerous to friend and foe. If so, *only* is out of place: for the meaning is

Ulysses is formidable,

He is formidable on the wrong as well as on
the right side.

In which case *but* is a Conjunction.

In another of the extracts (given here instead of in the context of the last edition) we find

What nymph see'er his voice *but* hears,
Will be my rival though she has *but* ears.

B. Jonson.

The meaning is obscure. Though *but* = *only*, it seems as if *though* were the wrong word, or as if the whole combination meant *provided only*.

In another of the original extracts:

To think *but* nobly of my grandmother:
but = otherwise than.

The full criticism of this word still requires further remarks under *But, prep.*

But. prep. [see *But, conj.*] Except.

The cases wherein the word *but* comes before us in respect to its parsing, and wherein the question arises as to whether it is a Conjunction or a Preposition, fall into two classes, as may be inferred from consideration of the conditions which determine the construction; the fundamental rule being this:

When the noun which follows is in the Nominative case, *But* is a Conjunction; when in the Accusative (or Objective) a Preposition.

This is because, with a Nominative case, we have a second subject, to which the preceding proposition or clause supplies a copula and predicate; and, as long as the noun is nominative, this understood complement is possible. The grammarian who would parse such a sentence as 'All ran away *but* John,' is free to maintain that the construction, if given *in full*, would be,

'All ran away,

but

John [did not run away].'

BUT

the parts between brackets being supplied from the context, or *understood*. Such being his view, he would, if he translated it into *literal* Latin, write,

'Omnes fugerunt,

sed

Johannes [non fugit].'

Here *but* = *sed*, a conjunction; and the result is two propositions, of (what is necessary to be noticed) two different Qualities; i.e. one being negative, the other affirmative. Of these the second is represented by the subject only, the predicate being supplied from the word which stands between the two; the function of which being to express an exception, qualification, or partial contradiction, gives the difference of Quality which is characteristic of propositions of this kind.

But what if *John* be treated as an accusative? or (what is the same thing) what if *but* be rendered in Latin by *prater* or *excepe*? In that case there is no possibility of framing a second proposition at all; inasmuch as there is no second subject; but, on the contrary, only a greater amount of complexity in the single one, which is

Subject.

Copula and Predicate.

'All except John,

fled.'

In Latin,

'Omnes, *prater* Johannem, fugerunt.'

To these notices, exhibiting the fundamental fact of the opposition in Quality of either the two propositions or the two parts of a single proposition, in all cases where *But* either is or can be treated as a preposition, it need only be added, with reference to the quotations from Smith and Goldsmith given below, that a question to which there is but one answer, and that negative, is for the present purpose an actual negation. 'Who can it be *but* Lycon?' = 'It is no one *but* Lycon.'

Who can it be, ye gods, *but* perjurd Lycon?
Who can inspire such storms of rage, *but* Lycon?
Where has my sword left one so black, *but* Lycon?

E. Smith, Phœdra and Hippolytus.

Your poem hath been printed, and we have no objection *but* the obscurity of several passages, by our ignorance in facts and persons.—*Swift.*

Our modern bards, why what, a pox,
Are they *but* senseless stones and blocks?

Goldsmith.

See *Except, prep.*

Such the rule; a rule which is purely logical. How far it carries us depends upon the nature of the language to which it applies. In the Latin or Greek it would carry us far, because in those tongues the nominative case is formally distinguished from the oblique ones; e.g. *Johannes* (in the foregoing illustration) as contrasted with *Johannem*. In the English, where, as a general rule, there is no such distinction, it helps us but little. That in many instances, where there is no sign of case, the construction from one point of view is far more natural and simple than it is from the other, is beyond doubt.

In English, however, a test so precise and definite as to preclude any reasonable difference, is wanted; and this is not to be found, except in one class of words, viz. those pronouns in which the difference between the nominative and objective cases is expressed by a difference of form: *I, me; thou, thee; he, him; she, her; we, us; ye, you; they, them*. Here, and here only, is the construction absolutely unequivocal.

Such being the fact, we have the following test.

BUT

In any doubtful sentence, change the noun which follows But into a proper name; and then change the proper name into a pronoun. In the extract under 2 part of this operation is performed already. For *Lycon*, then, write *he* or *him*, and see which reads best. If the nominative case give the simpler sense, But is a Conjunction; if the objective, a Preposition. Thus the possible answers to the question

Is John ready?

are,

No! we are all ready *but* ^{he} _{him};

and it is probable that few persons could tell without reflection which of the two he would give. In writing, the nominative is the commoner, e.g.

Away went Gilpin—who *but* ^{he} _{him}?
His fame soon spread around;
He carries weight, he rides a race!
'Tis for a thousand pound. *Cowper.*

That *he* is right is beyond all doubt; the position of *him* is less certain. In the opinion of the editor, the prepositional use of But is little less defensible than the prepositional use of *than*; of which the doctrine is as follows. So good a writer as Prior supplies us with the following lines:

Thou art a girl as much brighter than *her*,
As he was a poet sublimer than *me*:

lines which give us an authority for a strange usage, or an instance of bad grammar in a good writer, according to the critical temperament of the reader. Whichever view be taken, the fact of prepositional meanings and conjunctive meanings being closely allied, and passing imperceptibly into each other, is the primary fact in the eyes of the critic who, taking human speech as he finds it, accommodates the grammar to the language rather than the language to the grammar. Further observations on this point will be found under *Except, prep.*

Another combination of But is with the infinitive mood of the verb:

And here on this delightful day,
I cannot choose *but* think
How oft a vigorous man I lay
Beside this fountain's brink. *Wordsworth.*
The wedding-guest sat on a stone,
He cannot choose *but* hear,
When thus spoke on that aged man,
The bright-eyed marinere.

Coleridge, Ancient Mariner.

Here, as the verb is in the infinitive mood, its construction is that of a substantive.

The prepositional construction can be extended to whole clauses; i.e. a whole sentence may be treated as a single word.

Rash man! forbear, *but* for some unbelief,
My joy had been as fatal as my grief. *Waller*
Her head was bare,
But for her native ornament of hair,
Which in a simple knot was ty'd above.

Dryden, Fables.

When the fair boy receiv'd the gift of right,
And *but* for mischief, you had died for spite. *Id.*

This leads to another construction; the combination of *but* with *that*: the full details of which are connected with the latter word rather than the former (see *That, conj.*). The general principle, however, which guides us in this intricate philology is the fact that the word *that* may stand for a whole clause or proposition.

In the following extracts the several secondary clauses are: (1) The fact of the emission of certain virtues being avouched, &c. (2) The fact of an account being taken of the navy, &c. (3) The fact of there being no suspicion that the humour would waste itself. To these several facts the word

BUT

that applies; indeed, it is a short term for *them*. So far as it is this, it is Pronominal; whilst, so far as it stands between the two propositions and connects them it is a Conjunction. As a Pronoun, however, it may be governed by a Preposition, which *but* in such constructions may be considered. Hence, as *that* may represent a whole proposition, the combination *but that* is very common.

An emission of immaterial virtues we are a little doubtful to propound, it is so prodigious; *but that* it is so constantly avouched by many.—*Bacon*
They made no account, but that the navy should be absolutely master of the seas.—*Id., War with Spain.*

I fancied to myself a kind of ease in the change of the paroxysm; never suspecting but that the humour would have wasted itself.—*Dryden.*

When *that* is omitted, which is often the case, we get such constructions as the following; in each of which it is clear that the word *that* could be inserted.

And but infirmity,
Which waits upon worn times, hath something seiz'd
His wish'd ability, he had himself
The lands and waters measur'd.

are all admissible. The Relative, however, cannot stand by itself

The grey shrike feeds upon mice, shrews, small birds, frogs, lizards, and large insects. After having killed its prey, it fixes the body in a forked branch, or upon a sharp thorn, the more readily to pull off small pieces from it. It is from this habit of killing and hanging up their meat, which is observed also in other shrikes, that they have been generally called *butcher-birds*. . . Fremont, 'it is naturalized, and if desirable to render into English, there is no word which would be its precise equivalent. It is applied to the detached hills and ridges which rise abruptly, and reach too high to be called hills or ridges, and not high enough to be called mountains. Knob, as applied in the Western States, is the most descriptive term in English; but no translation or paraphrase would preserve the identity of these picturesque landmarks.' (Expedition to the Rocky Mountains, p. 145.)—*Bartlett, Dictionary of Americanisms*.]

The criticism that applies to the *ss* in *Buss*=kiss, applies here. Just as monosyllabic Substantives in *-s* become dissyllables in the plural; so do monosyllabic Verbs in *t* become dissyllables in the Participle and the Preterite Tense: *buss*, *busses*; *butt* and *butted*. Hence, notwithstanding the differences of origin, all the forms under notice are spelt with *tt*.

Butter. s. [A.S. *buttere*; Lat. *butyrum*; Gr. *βούτυρον*.]

And he took butter and milk, and the calf which he had dressed, and set before them.—*Genesis*, xviii. 8.

2. In Chemistry. Term applied to several butterlike substances.

Butterboat. s. Table utensil for holding melted butter.

I heard a rattling of dishes and plates—the back

drawing-room was the dining-room—I heard Daly superintending, and the great doll whispering—a confused sound of 'the butterboat there,'—mind, the macaroni at top,—and a sort of hustle-bustle kind of confusion, &c.—*Theodore Hook, Gilbert Gurney*, vol. iii. ch. ii.

Butterbur. s. Plant so called (*Tussilago Petasites*).

Butter-bur is called in the Greek *πετασίον* of the hugeness of the leaf, which is like to *πέταρον*, a hat; the Latines call it *Petasites*; in High Dutch, *Pestilentz-wurtz*; in Low Dutch, *Dockelbladeren*; in English it is named *Butter-burre*. It is very manifest that this is like to coltsfoot, and of the same kind. *Butter-burre* is hot and dry in the second degree, and of thinn parts. The roots of *butter-burre* stamped with ale and given to drinke in pestilent and burning fevers, mightily cooleth and abateth the heate thereof.—*Gerarde, Herball*, p. 814: 1633.

Buttercup. s. [see Butterwort.] Native Ranunculaceus plant so called.

(That the name applies to, at least, four closely allied species, *Ranunculus acris*, repens, bulbosus, and hirsutus, is certain. It also applies to the *Ranunculus Ficaria*; and, perhaps, to *R. auricomus*.)

The application, however, is indefinite. The first four species (with divided leaves) have all another name, *Crowfoot*: whilst the *Ranunculus Ficaria* is in the same predicament, being called *Pilewort*. Each of these terms is appropriate; *Crowfoot* suiting the *Ranunculi* with divided leaves, and *Pilewort* the *Ranunculus Ficaria*; the resemblance to piles being suggested by the roots.

They suit, too, *exclusively*; i.e. *Pilewort* is inapplicable to the *Crowfoot*, and *Crowfoot* to the *Pilewort*.

Kingcup is another name for the *Crowfoot*; whilst the *Goldlocks* (*Ranunculus auricomus*) is really but another *Crowfoot*. With these synonyms it is clear that *Buttercup* is a superfluous, as well as an indefinite, name. Yet it is common. The typical *Buttercups* are, probably, the *Ranunculus acris* and *bulbosus*; the species to which the application of the term is the most doubtful being the *Ranunculus Ficaria* (*Pilewort*) and *R. auricomus* (*Goldlocks*). That the name comes from the yellowness of the flower combined with its appearance at the time when the grass is best for butter, notwithstanding the exception suggested by the last extract, is probable. That the yellowness, however, of the butter is due to the *Buttercup* is a popular error, the whole genus of the *Ranunculi* (indeed the entire class to which they belong) being acrid poisons and avoided by cows.)

'Are they very pretty, Bob?' She called him Bob by his own particular request and instruction. 'Lovely. Full of flowers. There's *buttercups*, and there's daisies, and there's—the turnkey hesitated, being short of floral nomenclature—there's dandelions, and all manner of games.—*Dickens, Little Dorrit*, ch. vii.

Several varieties of the *buttercup*, the common daisy, the ragged robin with its delicate pink, and the white *Cardamine pratensis*, afford never-failing contrasts to the green fresh grass.—*Austed, The Channel Islands*, p. 176.

And daisy there, and cowslip too, And *buttercups* of golden hue, The children meet as soon as sought, And gain their wish as soon as thought.

Village Minstrel. *Buttercup*, not, perhaps, from butter and cup, but rather more probably from the French 'bouton d'or,' the bachelor's button, a name given to its double variety, the cup being the old English cop. . . . It will have originally meant button-head.—*Dr. Prior, Popular Names of British Plants*.

Butterfingers. s. [two words rather than a compound.] *Colloquial or slang* term addressed to anyone who lets slip what he ought to hold or catch.

When, in the executioner lifting the head of the seventh traitor, as the preceding six had been lifted to the public gaze, he happened to let it fall, cries of 'Ah, clumsy!'—'Halloo, *butter-fingers*!'—were heard

from various quarters of the assembly.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. i.

Butterfish. s. Fish so called (*Gunnellus vulgaris*).

What your Cornish *butterfish* [*Gunnellus vulgaris*] is, I know not. A little suspect it will prove the same with our sea-swall, if you melt into oil as ours do.—*Ray, Correspondence, Letter of Mr. Johnson*, p. 128.

The spotted gunnel, or *butterfish*, as it is frequently called, from the consistence and quantity of mucous secretion with which its sides are covered, is sufficiently distinguished from the blennies by its dorsal fin, . . . from which it has obtained in the Orkneys and in some other countries of the North of Europe the names of *Suordick*, and *Svordfish* in Norway, from a supposed resemblance in shape to the blade of a sword.—*Yarrell, British Fishes*.

Butterflower. s. [see Buttercup.]

Crowfoot is called by *Lobel Ranunculus pratensis* . . . in English, *King Kote*, *Gold cups*, *Gold knobs*, *Crowfoot*, and *Butter-floures*.—*Gerarde, Herball*, p. 952: ed. 1633.

Has't thou heard the *butterflies*, What they say betwixt their wings?

Or in stillest evenings With what voice the violet woo's

To his heart the silver dew's? Sometimes I let a sunbeam slip,

To light her shaded eye; A second fluster'd round her lip

Like a golden butterfly. *Id., Talking Oak*.

Butterfly-fish. s. *Blennius ocellaris*. See extract.

The Ocellated Blenny was described as a British fish by Colonel Montague, who obtained three specimens by dredging on the south-coast of Devon. . . . It is the *Blennius* of *Belon*; . . . the *Mesoro* of *Salvianus*, and the *butterfly fish* of *Willughby*.—*Yarrell, British Fishes*.

Yellow, thumbed, devastated by flies and time, stained with spots of oil and varnish, broken-backed, dog-eared—a sorry lazar-house copy, which no bookstall-keeper would look at, and at which the meanest of *buttermen* would turn up his nose—I have a book that I love.—*Salis, Dutch Pictures, The Shadow of a young Painter*.

Cabbage-wood . . . is sometimes used in ornamental furniture; but does not answer very well, as the ends of the fibres are too hard and the medullary part is too soft for holding glue. The surface is, also, very difficult to polish, and cannot be preserved with a varnish. The trunk, after the centre part is rotted out, forms a durable water-pipe.—*Waterston, Encyclopædia of Commerce, in voce.*

Cabbaging. *verb. abs.* Growth after the manner of a cabbage. See Cabbage, *v. n.*

Cabin. *s.* [Fr. *cabane* = shed, hut.]

1. Hut or small cottage; temporary habitation.

Unto a silly cabin, though weak, yet stronger against woes. *Sir P. Sidney.*

Some lodged were Tortosa's streets about. *Fairfax.*

Contenting ourselves with our smallness, let us oppose unto all this stately masquerade, with which the world feedeth itself, the lodgings and cabins of the ancient true pastors.—*Harnmar, Translation of Beza's Sermons, p. 55.*

Neither should that odious custom be allowed, of slaying off the green surface of the ground, to cover their cabins, or make up their ditches.—*Swift.*

The habits of the Celtic peasant were such that he made no sacrifice in quitting his potatoe ground for the camp. He loved excitement and adventure. . . . At every fair and market he had heard that a good time was at hand. . . . By the peat fires of a hundred thousand cabins had nightly been sung rude ballads which predicted the deliverance of the oppressed race.—*Macaulay, History of England, ch. xii.*

2. Small apartment.

a. In a house.

So long in secret cabin there he held

Her captive to his sensual desire,
Till that with timely fruit her belly swell'd,
And bore a boy unto that savage sire. *Spenser, Faerie Queen.*

and into the cabins [in the margin, cells].—*Jeremiah, xxvii. 16.*

Men may not expect the use of many cabins, and safety at once, in the sea service.—*Sir W. Raleigh.*

The chessboard, we say, is in the same place it was, if it remain in the same part of the cabin, though the ship sails all the while.—*Locke.*

Cabin. *v. n.* Live in a cabin.

I'll make you feed on berries and on roots,
And feed on curds and whey, and suck the goat,
And cabin in a cave. *Shakespeare, Titus Andronicus, iv. 2.*

They two have cabin'd
In many as dangerous, as poor a corner. *Beaumont and Fletcher, Two noble Kinsmen.*

Cabin. *v. a.* Confine in a cabin.

Fleance is 'scaped, I had else been perfect
As broad and gen'ral as the casing air;
But now I'm cabin'd, cribb'd, confin'd, bound in,
To saucy doubts and fears. *Shakespeare, Macbeth, iii. 4.*

They feel themselves in a state of thralldom, they imagine that their souls are coop'd and cabin'd in, unless they have some man or some body of men dependent on their mercy.—*Burke, Speech at Bristol in 1780.*

Cabinboy. *s.* Personal attendant on the captain, with special charge of his cabin; boy or lad of all work aboard ship.

Such was the ordinary character of those who were then called gentlemen captains. Mingled with them were to be found . . . men whose whole life had been passed on the deep, and who had worked and fought their way from the lowest offices of the fore-castle to rank and distinction. One of the most eminent of these officers was Sir Christopher Mings, who entered the service as a cabin boy. . . . From him sprang, by a singular line of descent, a line of valiant and expert sailors. His cabin boy was Sir John Narborough, and the cabin boy of Sir John Narborough was Sir Cloudesley Shovel.—*Macaulay, History of England, ch. iii.*

Cabinet. *s.* [Fr.]

1. Hut or small house; cot or tent. *Obsolete.*

3. Private room in which consultations are held; hence, the members of the council which holds them.

You began in the cabinet what you afterwards practised in the camp.—*Dryden.*

Used *adjectively*, or as the first element in a compound.

The doctrine of Italy, and practice of France, in some kings' times, hath introduced cabinet-councils.—*Bacon, Essays, xx.*

From the highest to the lowest it is universally read; from the cabinet-council to the nursery.—*Gay, To Swift.*

The cabinet council, shortly termed the cabinet

forms only part of the ministry or administration.

. . . Its [the privy council's] duties of advising the crown and conducting the government of the country, are almost exclusively performed by the principal ministers of state, who form another section of it called the cabinet council. This is so termed on account of its being originally composed of such members of the privy council as the king placed most trust in, and conferred with, apart from others, in his cabinet, or private room. Speaking constitutionally, however, there is no difference between a cabinet and a privy councillor.—*A. Fonblanque, jun., How we are governed, let. 6.*

4. Set of boxes or drawers for curiosities; private box.

Who sees a soul in such a body set,
Might love the treasure for the cabinet. *B. Jonson.*
In vain the workman shew'd his wit,
With rings and hinges counterfeited,
To make it seem, in this disguise,
A cabinet to vulgar eyes. *Swift.*

Used *adjectively*, and meaning small and neat, as fitted for a cabinet.

He [Varnhagen von Ense] sins in the same places where his magus Apollo, Goethe sinned; fingering often where a brave man would strike; painting where an honest man would cut. He is, indeed, a walking cabinet edition of Goethe, in all the externalities of manner and style; elevating neatness almost into sublimity; witching prettiness that it looks like beauty.—*Foreign Quarterly Review, no. 1, Memoirs of Varnhagen von Ense.*

5. Any place in which things of value are hidden.

Thy breast hath ever been the cabinet,
Where I have lock'd my secrets. *Sir J. Denham.*
We cannot discourse of the secret, but by describing our duty; but so much duty must needs open a cabinet of mysteries.—*Jeremy Taylor.*

Cabinet. *v. a.* Enclose as in a cabinet.

This is the frame of most men's spirits in the world; to adore the casket, and content the jewel that is cabin'd in it.—*Hewitt, Sermons, p. 87.*

Cabinet-maker. *s.* One who makes small nice drawers or boxes.

The root of an old whetstone will make very fine boxes and combs; so that they would be of great use for the cabinet-makers, as well as the turners and others.—*Mortimer, Hysbandry.*

The cabineted skeleton
Of fallen majesty! *Professor Blackie, Poems.*

Cabinmate. *s.* One who occupies the same cabin with another.

His cabin-mate, I'll assure ye.—*Beaumont and Fletcher, Sea-Voyage.*

Cable. *s.* [see last extract.] Large strong rope or chain to which the anchor is fastened.

What though the mast be now blown overboard,
The cable broke, the holding anchor lost,
And half our sailors swallow'd in the flood;
Yet lives our pilot still. *Shakespeare, Henry VI. Part III. v. 4.*

CABLE

The length of the *cable* is the life of the ship in all extremities; and the reason is, because it makes so many bendings and waves, as the ship, riding at that length, is not able to stretch it; and nothing breaks that is not stretched.—*Sir W. Raleigh*.
The cables crack, the sailors' fearful cries
Ascend, and sable night involves the skies.

Dryden.

Used *adjectivally*, or as the *first element* in a compound. The hatband of the following extracts was a thick band in use about the beginning of the 17th century.

I had on a gold *cable-hatband*, then new come up, which I wore about a murrey French hat I had—cuts my hatband, and yet it was massive goldsmith's work.—*B. Jonson, Every Man out of his Humour*, iv. 6.

More cable till he had as much as my *cable-hatband* to fence him.—*Marston, Antonio and Mellida*, ii. 1. (H. and W.)

[*Cable*, Portuguese, *calabre, cabre*; Spanish, *cabre, cable*; French, *cable*; Old French, *caable, chaable*. The double *a* in the Old French forms indicates the loss of the *d* extant in the Middle Latin *cadabulum*, *cadabola*, originally an engine of war for hurling large stones; and the French *chaable*, Middle Latin *cabulus*, had the same signification; 'une grande perière qu'on clame *chaable*'. (Ducange.)
'Sed mox ingentia saxa
Emittit *cabulus*.' (Ibid.)

From the sense of a projectile engine the designation was easily transferred to the strong rope by which the strain of such an engine was exerted. 'Concesserint...descarkagium sexaginta dolorum suis instrumentis, scilicet *cabulis* et windasio tantum.' (Ducange, Didot.)

Examples of the fuller form of *cadable* in the sense of cable are not given in the dictionaries, but it would seem to explain the Icelandic form *kadal*, a rope or cable. It is remarkable that the Estonian has *kabel*, a rope, string, band, and the Arabic *habl*, a rope, would correspond to *cable*, as the Turkish *kaygar* to *caviere*.—*Wedgwood, Dictionary of English Etymology*.]

Cabled. adj.

1. Fastened with a cable.

While they, her flattering creeks and opening bowers
Cautious approaching, in Myrina's port
Cast out the *cabled* stone upon the strand. *Dyer*.

2. In Heraldry.

Cabled, in Heraldry, is applied to a cross formed of the two ends of a ship's cable; sometimes also to a cross covered over with bands of rope; more properly called a cross corded.—*Rees, Cyclopædia*, in voce.

Cablet. s. [Fr. *cablôt*.] Tow-rope.

Cablet, in sea-language, denotes any cable-laid rope under nine inches in circumference.—*Rees, Cyclopædia*, in voce.

Cabling. verbal abs. Ornament with which the flutings of a column are sometimes filled to one third of their height.

Cabling, in Architecture, is the figure of a staff or reed, either plain or carved in resemblance of a rope or rush, wherewith the third part of the flutings of a column are (*sic*) filled up; hence called *cabled flutings*. There are also *cablings* in relievo without fluting.—*Rees, Cyclopædia*, in voce.

Cablish. s. See extract.

Cablish (cablicium) signifies brushwood, according to the writers of the Forest Laws; but Spelman thinks it more probably windfall-wood, because it was written of old 'cabulum', from 'cadere', or, if derived from the French 'chablis', it must also be windfall-wood.—*Jacob, Law Dictionary*, in voce.

The sense of *windfall* is confirmed by the following passage:

Cable, a windfall, or tree overthrown by the wind or tempestuous weather.—*Cotgrave*.

Cabób. See Kebo.

Cabóche. s. Bullhead, or miller's thumb: (probably applied to other big-headed fishes, or to the tadpole). *Obsolete*.

Nomina piscium... Hic [sic] caput, a *cabocha*. Hic capito, a bulhead.—*Nomina* (15th century); *Vocabularies in Library of National Antiquities*. (Wright.)

Cabóche. v. a. (whence Caboched.) In Heraldry. Beasts' heads borne without any part of the neck, and full-faced.

Caboched, *caboshed* or *cabosed*... is where the head of a beast is cut off behind the ears by a section parallel to the face; or by a perpendicular section, in contradistinction to couped, which is done by a horizontal line; besides that it is further from the ears than *cabossing*. The head, in this case, is placed full-faced, or affrontée, so that no part of the neck can be visible. This bearing is by some called *Trunked*.—*Rees, Cyclopædia*, in voce.

Cabóching. verbal abs. See *Cabocha*.

CACI

Caboose. See Kabuse.

Cabriolet. s. [Fr.] Open two-wheeled carriage with an occasional cover for the head.

In those days men drove 'gigs' as they since have driven stanhopes, tilburs, demets, and *cabriolets*, and I rather piqued myself upon my 'turn out'; my chestnut horse was a fast trotter, and in little more than three quarters of an hour, from Westminster Bridge, I reached mine host's retreat.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. i.

Gaily did Bijou de Millescolles drive his peagreen *cabriolet* to the spot in question.—*Disraeli the younger, The young Duke*, b. i. ch. ix.

Cáburns. s. [?] See extract.

Cáburns, in sea-language, denote small lines made of spun yarn, wherewith to bind cables, seize tackles, and the like.—*Rees, Cyclopædia*, in voce.

Cáchalot. s. [?] Spermaceti whale. (This is what the word means in ordinary language; the statements in the extracts, as to the varieties or species of the animal, apply rather to the zoological value of the term Physeter, than to the import of the English word.)

Physeter, the *cachalot*, in Ichthyology, is a genus of animals of the class and order Mammalia Cete, of which the general character is, teeth in the lower jaw and none in the upper. There are Catodon, Lesser *Cachalot*; Macrocephalus, blunt-headed *Cachalot*; Microps, Sharp-nosed *Cachalot*; Tursio, High-finned *Cachalot*.—*Rees, Cyclopædia*, in voce.

Some of our readers may perhaps be surprised that under the general term *cachalot* we introduce to their notice only one species of this variety of whale. This we do, not because we deny the existence of others, far from it, but only because those others have not accurately been described or established. Desmaret but a few years ago admitted three sub-genera and seven species; and Lacépède has three genera and eight species, including his *Cachalots*, *Physalus* and *Physeter*.—*Naturalist's Library, Whales*, by R. Hamilton.

Here the old hag burst into a sort of shrieking laugh: 'Send him here, child,' and the almost unearthly *cachinnation* was continued—'send him here, child—I can't go to seek him—and it is done—only bring him here.'—*Marryat, Snarleygove*, vol. iii. ch. ii.

Cachinnatory. adj. Laughing with cachinnation.

So pass the sultry dog-days, in the most electric manner; and the whole month of July. And still, in the sanctuary of justice, sounds nothing but Harmodius-Aristogiton eloquence, environed with the hum of crowding Paris; and no registering accomplished, and no 'states' furnished. 'States?' said a lively parliamenteer. 'Messieurs, the states that should be furnished us, in my opinion, are the States-General.' On which timely joke there follow *cachinnatory* buzzes of approval.—*Carlyle, French Revolution*, pt. i. b. iii. ch. iv.

'Mr. Pelham,' said this gentleman, who was dressed in a brown coat, white waistcoat, buff-coloured inexpressibles, with long strings, and gaiters of the same hue and substance as the breeches—'Mr. Pelham, pray be seated—excuse my rising; I'm like the bishop in the story, Mr. Pelham, too old to rise;' and Mr. Briggs grunted out a short, quick, querulous 'he—he—he', to which, of course, I replied to the best of my *cachinnatory* powers.—*Sir E. L. Bulwer, Pelham*, ch. xxxvi.

Cacóthes. s. [Lat. *cacóthes*, from Gr. *κακός*=bad, *ἥθος*=habit.] Bad custom or habit: (generally applied to scribblers; the well-known passage of Juvenal,

Tenet insanabile multos
Scribendi *cacóthes*, et ægro in corde senescit,'
explains the allusion).

There is a certain distemper, which is mentioned neither by Galen nor Hippocrates, nor to be met with in the London Dispensary. One would imagine that this cheek might have damped the North Briton; but it served only to agitate his humour for disputation. He said if every nation had its own recitative or music, the Scots had theirs; and the Scotchman who had not yet acquired the *cadence* of the English, would naturally use his own in speaking their language; therefore, if he was better understood than the native, his recitative must be more intelligible than that of the English; of consequence, the dialect of the Scots had an advantage over that of their fellow-subjects; and this was another strong presumption that the modern English had corrupted their language in the article of pronunciation.—*Smollett, Expedition of Humphry Clinker*.

5. In the following extract a more definite import, as the name of a kind of metrical prose, is suggested.

Measured prose seems to have been known to our language from the earliest period. Even in the simple narrative of our venerable Chronicle, we often find traces of a rhythmical structure, much too marked to be the result of accident. . . . *Cadence* seems to have been the term used to denote the kind of measured prose of which we are now speaking; and, if in any composition much attention was paid to the flow of the rhythm, it was said (at least in the fourteenth and fifteenth centuries) to be 'prosed in faire *cadence*'. In the House of Fame, Chaucer represents himself as thus addressed:

Thou . . . hast set thy wit . . . To maken bookes, songes, and dities, In rhyme or else in *cadence*.

And Tyrwhitt conjectures . . . that he had written in a species of poetical composition, distinct from rhyming verses. The tale of Melbeus has been considered as blank verse, but . . . it is certainly a specimen of *cadence*. . . . This measured prose, or *cadence* seems to have been long considered as peculiarly suitable to sermons. . . . There are portions of Chaucer's *cadence*, which might [the italics are the author's] have given Milton the hint on which he fashioned his choral rhythms in Samson Agonistes.—*Dr. Guest, English Rhythms*, b. iii. ch. ix.

Cádenced. adj. Regulated by musical measure or proportion.

A certain measured, *cadenced* step, commonly called a dancing step, which keeps time with, and as it were beats the measure of, the music which accompanies and directs it, is the essential characteristic which distinguishes a dance from every other sort of motion.—*A. Smith, On the Imitative Arts*.

Cádency. s. Same as *Cadence*.

The *cadency* of one line must be a rule to that of the next; as the sound of the former must slide gently into that which follows.—*Dryden*.

Cádent. adj. [Lat. *cadens*, *cadent-is*.] Falling down. *Rare*.

CADU

Let it stamp wrinkles in her brow of youth; With *cadent* tears fret channels in her cheeks; Turn all her mother's pains, and benefits, To laughter and contempt.

—*Shakespeare, King Lear*, i. 4.

Cadét. s. [Fr. *cadet*.]

1. Younger brother.

These rambling letters of mine . . . are nought else than a legend of the cumbersome life and various fortunes of a *cadet*.—*Howell, Letters*, ii. 61.

2. Younger member of a family in general; anyone other than the head of it.

Joseph was the youngest of the twelve, and David the eleventh son, and the *cadet* of Jesse.—*Sir T. Browne, Vulgar Errors*.

Our landlord is a man of consequence in this part of the country; a *cadet* from the family of Arxyl, and hereditary captain of one of his castles.—*Smollett, Expedition of Humphry Clinker*.

Vacations themselves are none to him, he is on'y rather worse off than before; for commonly he has some intrusive upper-boy fastened upon him at such times; some *cadet* of a great family; some neglected lump of nobility or gentry; that he must drag after him to the play, to the Panorama, to Mr. Bartley's Orrery, to the Panopticon, or into the country, to a friend's house, or his favourite watering-place.—*Lamb, Essays of Elia, The old and the new Schoolmaster*.

What he [Louis XIV.] really obtained in Italy was little more than a splendid provision for a *cadet* of his house.—*Macaulay, History of England*, ch. xxiv.

Nature had done much for him, and the slow progress of decay was carried off by his consummate bearing. He looked, indeed, the chieftain of a house of whom a *cadet* might be proud.—*Disraeli the younger, Coningsby*, b. iv. ch. v.

3. Volunteer in the army, who serves in expectation of a commission.

The royal apartments are now occupied by a college of young gentlemen *cadets*, educated at the king's expense in all the sciences requisite for forming an engineer.—*Swinburne, Travels in Spain*, let. 44.

Cadétship. s. Military appointment in the East India service.

The present Lord Darrell gave up all idea of being an ambassador, but he was clever; and though he hurried to gratify a taste for pleasure which before had been too much mortified, he could not relinquish the ambitious prospects with which he had, during the greater part of his life, consoled himself for his *cadetship*.—*Disraeli the younger, The young Duke*, b. iii. ch. iii.

Cáder. s. Colloquial, with Provincial variations of meaning: as huckster; hawk-er; buyer up of poultry, &c., from the small breeders for selling in the larger (London) market. *Cadge* is given in Bailey as the name of a round frame of wood on which the hawks were carried: a fact which connects the word with the sale of poultry as above.

Cádium. s. See extract.

This metal was obtained in 1817 by Professor Strömyer of Göttingen, in examining into the cause of the yellow colour of certain oxides of zinc, which had been erroneously supposed to contain arsenic: he called it *cadmium*, from *καδμεία*, a term formerly applied both to calamine and to the substance which sublimes from the furnace during the manufacture of iron. . . . *Cadmium*, in its physical qualities, much resembles tin, but is rather harder and more tenacious.—*Brande, Manual of Chemistry*.

Cádnat. s. See extract.

Cádnat—a word mentioned only, as far as I know, in a book entitled 'The Perfect School of Instruction for Officers of the Mouth,' by G. Rosse, 12mo, 1682, where it is defined, a sort of state covering for princes, dukes, or peers, at a great dinner. . . . The term '*cadenas*' was given in French to the ship-formed vessel belonging to the table-service, which is more commonly called a 'net.'—*From Nares's Glossary*, by Halliwell and Wright.

Cádown. s. [?] Jackdaw; chough; young crow: (its application varying with the district. It seems, however, to be limited to the crow kind. In the following extract it translates *pullos*).

Moreover, the bird [the crow] only feedeth her young *cadowes* for a good while after they are able to fly.—*Holland, Plinie*, b. x. ch. xii. (Rich.)

Cadúcity. s. [Fr. *caducité* = tendency to fall.] Frailty.

Were I to conjecture, I should say, that the whole will centre, before it is long, in Mr. Pitt & Co., the present being a heterogeneous jumble of youth and *caducity*, which cannot be efficient.—*Chesterfield, Letters*, 390. (Ord MS.)

When you happen to see either Monsieur or Madame Perry, I beg you will give this melancholic proof of my *caducity*, and tell them, that the last time I went to see the boys, I carried the Michaelmas quarterage in my pocket, and when I was there I totally forgot it.—*Chesterfield, Letters*, 426. (Ord MS.)

Caduke. *adj.* [Lat. *caducus*.] Having a tendency to fall. *Obsolete*.

All their happiness was but caduke and unlasting.—*Hicks, Translation of Lucian*.

Cæsarian. *adj.* See *Cesarian*.

Cæsura. *s.* See *Cesura*.

Caffeine. *s.* Crystallizable principle of coffee. With *ff*, as in the English *coffee*.

It is remarkable that one and the same principle, and that belonging to the class of azotized basic bodies, should be found in two such dissimilar substances as tea and coffee, infusions of which are used as a beverage over the greater part of the known world, and yet that the peculiar characteristic properties of tea and coffee should not be referable to its presence; at least the action of theine and caffeine on the system is by no means obvious; it is neither narcotic nor in any way poisonous.—*Brande, Manual of Chemistry*.

With *ff*, as in the French *café*.

Coffee has been analysed by a great many chemists with considerable diversity of results. The best analysis is, perhaps, that of Schrader. He found that the raw beans distilled with water in a retort communicated to it their flavour. . . . On reboiling the beans, filtering, and evaporating the liquor to syrup, adding a little alcohol till no more matter was precipitated, and then evaporating to dryness, he obtained 17.38 per cent of a yellowish-brown transparent extract, which constitutes the characteristic part of coffee, though it is not in that state the pure proximate principle called *caffeine*.—*Ure, Dictionary of Arts, Manufactures, and Mines*, vol. *Coffee*.

Cag. *s.* Same as *Keg*.

A cag of sturgeon, two twelve-gallon cags of ale.—*Records of Trinity House (Hull)*, 1676–1683. (Ord MS.)

Cage. *s.* [Fr. *cage*; Lat. *cavea*=hollow place; whence den, or place of confinement.]

1. Enclosure-formed with twigs or wire, in which birds are kept.

See whether a cage can please a bird? or whether a dog grow not fiercer with tying?—*Sir P. Sidney*.

He taught me how to know a man in love; in which cage of rushes, I am sure, you are not a prisoner.—*Shakespeare, As you like it*, iii. 2.

Though slaves, like birds that sing not in a cage, They lost their genius and poetic rage. *Waller*.

And parrots birds in silver cages lounge, Dryden. The reason why so few marriages are happy is, because young ladies spend their time in making nets, not in making cages.—*Swift*.

2. Enclosure formed of iron bars for the keeping of wild beasts.

A man recurs to our fancy by remembering his garment; a beast, bird, or fish, by the cage, or courtyard, or cistern, wherein it was kept.—*Watts, Improvement of the Mind*.

3. Prison.

Stone walls do not a prison make,
Nor iron bars a cage;
The mind within itself can take
That for a hermitage.

Lovelace, To Althea from Prison.

Cage. *v. a.* Enclose in a cage.

He swoln, and pampered with high fare,
Sits down and snorts, cag'd in his basket-chair.

Donne.

The Scots treacherously sold him [K. Charles I.] to the goodly members sitting at Westminster, who, after they had caged him awhile, at last set up a mock court of justice, in which they formally arraigned and condemned him.—*Dr. Matthew Griffith, Sermons*, p. 25: 1660.

Swift many years later confessed some part of what he felt when he found himself on his part of court. His spirit had been bowed down, and might seem to have been broken by calamities and humiliations. . . . A sharp word or a cold look of the master sufficed to make the servant miserable during several days. But this tameness was merely the tameness with which a tiger, caught, caged, and starved, submits to the keeper who brings him food.—*Macaulay, History of England*, ch. xix.

Cagebird. *s.* Bird kept, or capable of being kept, in a cage.

They will here learn what the German naturalist, Bechstein, the greatest of authorities upon the natural history and treatment of cage-birds, has written.—*Translation* (edited by G. H. Adams) of

VOL. I.

Bechstein's Handbook of Chamber and Cage Birds, preface.

Caged. *part. adj.* Confined in a cage; furnished with cages or cells.

Though you close anchorite's contracted shroud
Made his innarrow'd carcass seem a crowd,
Yet the cag'd votary did wider dwell
Than thou in thy large roof, and spreading cell.

Verses prefixed to Gregory's Posthuma; 1650.

And now she would the caged cloister fly:
Religious love put out religion's eye.

Shakespeare, Lover's Complaint.

Caincoloured. *adj.* See extract and remarks.

Peter Simple, you say your name is?—Ay, for fault of a better.—And Master Slender's your master?—Ay, forsooth.—Does he not wear a great long beard, like a glove's paring-knife?—No, forsooth! He has but a little wee face, with a little yellow beard—a *cain-coloured* beard.—*Shakespeare, Merry Wives of Windsor*, i. 3.

Such is the reading in Theobald Dyce, and Singer; being in Knight and Collier *cane-coloured*. The former is the reading of the folio; the spelling being with a capital C and final e, i.e. *Caine-coloured*. The second, that of the quarto, is *kane-coloured*, with a k. Theobald's remark that Cain and Judas, in the tapestries and pictures of old, were represented with yellow beards, is partially approved by Steevens, who quotes passages to show that the red beard of Judas was often alluded to, and also instances of *Abraham-coloured* as an adjective with a similar application, these latter being subject to the exception that *Abraham* might simply mean *auburn*. Still the term *cane-coloured*, interpreted as sickly yellow, has the expression *straw-coloured* in the *Midsummer-Night's Dream* (also applied to a beard) in its favour. Malone, finding in the quarto—

'Quickly. He has, as it were, a *whay-coloured* beard.

Simple. Indeed, my master's beard is *kane-coloured*.

—and holding that *whay* and *canes* are much of a colour, considers that this latter reading is probable. The desideratum, however, in the case of *Cain* is the want of any special evidence that *Cain*, in regard to the colour of his beard, was in the same category with Judas. Neither Theobald nor Dyce supplies this, though both treat the word as a proper name. Of those who read *cane*, all agree in making the word mean the vegetable cane. The entry, however, of *Cane*=weazel suggests another interpretation.

Cairn. *s.* Heap of stones piled over a grave, as a memorial, in Keltic times.

A cairn is a heap of stones thrown upon the grave of one eminent for dignity of birth, or splendour of achievements.—*Johnson, Journey to the Western Islands of Scotland*.

Cairngorm. *s.* See extract.

Cairngorm is a name given by lapidaries to an ornamental stone found on the mountain of that name in Inverness-shire. It is a splendid quartz, of various shades and nearly transparent.—*Waterston, Cyclopaedia of Commerce*, in voce.

Caisson. *s.* [Fr.] See extract.

The practice of building in caissons is a method sometimes adopted in laying the foundation of bridges in very deep or rapid rivers. These are large hollow vessels framed of strong timbers, and made watertight, which being launched and floated to a proper position in the river, where the ground has been previously excavated and levelled, are there sunk. The piers of the bridge are then built within them, and carried up above, or nearly to the level of the water, when the sides of the caisson are detached from the bottom and removed; the bottom, composed of a strong grating of timber, remaining, and serving for the foundation to the pier.—*Rees, Cyclopaedia*, in voce.

Caistif. *s.* [O.Fr. *chetiff*, *chaitiff*; Lat. *capitivus*—see, also, last extract.] Mean villain; despicable knave: (often implying a mixture of wickedness and misery).

Vile caistif! vassal of dread and despair,
Unworthy of the common breathed air;

Z

Why livest thou, dead dog, a longer day,
And dost not unto death thyself prepare? *Spenser*.

'Tis not impossible,

But one, the wickedest caistif on the ground,
May seem as shy, as grave, as just, as absolute,
As Angelo. *Shakespeare, Measure for Measure*, v. 1.

The wretched caistif, all alone,
As he believ'd, began to moan,
And tell his story to himself. *Butler, Hudibras*.

I see him who was once the object of my contempt
and scorn, a despised beggar, an ulcerous caistif, a loathsome spectacle of mortality, now basking himself in Abraham's bosom.—*Killingbeck, Sermons*, p. 178.

[On the other hand, many words which denoted originally a low class in society have, by a reverse process, acquired in modern times a moral signification; thus villain, rogue, rascal, scoundrel, *cattivo*, *chetif* and *caistif*, from *captivus*, have been transferred from baseness of social condition to baseness of conduct.—*Sir C. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. viii.]

Caistif. *adj.* Base; servile.

Would raise one's mind above the starrie sky,
And cause a *cattive* courage to aspire.
Spenser, Shepherd's Calendar, October.

Good cause he had to hasten thence away;
For on a day his wary dwarf had spyde
Where, in a dungeon deep, huge numbers lay
Of *cattive* wretched thralls, that wailed night and day.

Id., Faerie Queen, i. 5, 45.

Start not, Derisive,
Tinge not thy caistif cheek with reddening honour.

Thomson.

Caistifee. *s.* [as contrasted with *captivity*, this is a good specimen of a word derived indirectly from the Latin through the Norman, compared with one derived directly from the Latin.] *Captivity. Obsolete*.

He that leadeth into caistifee, shall go into caistifee.—*Wycliffe, Apocalypse*, xiv. 24.

Cajole. *v. a.* [Fr. *cageoler*=talk like a cage-bird.] Flatter; soothe; coax; wheedle.

Thought he, 'tis no mean part of civil
State-prudence, to cajole the devil.

Butler, Hudibras.

The one affronts him, while the other cajoles
and pities him, takes up his quarrel, shakes his head at it, clasps his hand upon his breast, and then protests and protests.—*Sir B. J. Estlin*.

Those, whom great learning, parts, or wit renowns,
Cajole with hopes of honours, scarlet gowns,
Provincials, and palls, and triple crowns.

Oldham, Satires upon the Jesuits.

In the course of three centuries which preceded Edward's reign, they had ample time and opportunity to threaten or cajole a simple-minded race into the belief that they had a right to impose the Levitical obligations upon them.—*Kemble, The Saxons in England*, b. ii. ch. x.

Barillon was most desirous to remain a few days longer in London, and for that end omitted no art which could conciliate the victorious party. . . . At his table he publicly drank the health of the Prince of Orange. But William was not to be so cajoled.—*Macaulay, History of England*, ch. x.

With into.

To this assertion full credit is due. But bribes may be offered to vanity as well as to cupidity; and it is impossible to deny that Penn was cajoled into bearing a part in some unjustifiable transactions of which others enjoyed the profits.—*Macaulay, History of England*, ch. iv.

Cajole. *v. n.* Talk in a wheedling or coaxing manner.

My tongue, that wanted to cajole,

I try'd, but not a word would troll.

Rymers.

Cajolery. *s.* Flattery; coaxing; wheedling.

Thus the charlatan spirit, by his cajolery, persuades many easy persons to set vain and wanton liberties upon the exterior of their behaviours.—*W. Montagu, Devout Essays*, pt. ii. p. 105: 1654.

Even if the lord-mayor and speaker mean to insinuate that this influence is to be obtained and held by flattery their people, &c., such cajoleries perhaps would be more prudently practised than professed.—*Burke, Letter to B. Burke*.

Nevertheless deepen your cajolery, harp quick and quicker, ye royalist seigneurs; with a dead-lift effort you may bring it to that.—*Carlyle, French Revolution*, pt. ii. b. v. ch. vi.

Cajuput. *s.* [Malay.—see extract.] Tree so called (*Melaleuca minor*), whence cajuput oil.

This tree was described by Rumphius under the names of arbor alba minor, *cajuputi*, *dann kitsjil*, and *caju-kilan*. It has got its name from its colour *kayu-puti*, which signifies white wood, and hence its appellation, as given to it by Rumphius, arbor alba. *Cajuput* oil is usually imported in green-glass bottles; . . . its colour is green; . . . it is transparent, liquid, of a strong penetrating smell.—*Pereira, Elements of Materia Medica*.

As the word meaning tree is spelled with

k and *y* in Crawford's Malay Dictionary (where the words under notice are *kayu* = tree and *putih* = white), and as such is its sound, it would be well to adopt this spelling; that with *j* being Dutch. The term is, probably, recent enough to allow of this.

Cake. s. [Dutch, *koek*.]

1. Kind of delicate bread.

You must be seeing christenings! do you look for ale and cakes here, you rude rascals!—*Shakespeare, Henry VIII.* v. 3.

The dismal day was come, the priests prepare Their leaven'd cakes, and fillets for my hair. *Dryden.*

2. Anything of a form rather flat than high, by which a cake of bread is sometimes distinguished from a loaf.

There is a cake that groweth upon the side of a dead tree, that hath gotten no name, but it is large and of a chestnut colour, and hard and pithy.—*Bacon, Natural and Experimental History.*

3. Concreted matter; coagulated matter.

Yet when I meet again those sorcerer's eyes, Their beams my hardest resolutions thaw, As if that cakes of ice and July met.

Beaumont and Fletcher, Martial Maid.
Then when the fleecy skies new cloath the wood, And cakes of rustling ice come rolling down the flood. *Dryden.*

4. Oilcake.

How much cake or guano this labour would purchase we cannot even guess at, and without being in possession of information on all these points we should not be justified in asserting that vria is not cheap manure.—*Ansted, The Channel Islands,* p. 467.

My cake is dough = I have failed in baking; thence meaning failure, miscarriage, disappointment in general.

My cake is dough, but I'll in among the rest, Out of hope of all, but my share of the feast. *Shakespeare, Taming of the Shrew,* v. 1.

Steward! your cake is dough as well as mine. *B. Jonson, The Case is altered.*
You shall have rare sport if my cake be n't dough, and my plot do but take.—*Ozell, Translation of Eubelais,* p. 105.

Notwithstanding all these traverses, we are confident here that the match will take: otherwise *my cake is dough*.—*Howell, Letters,* l. 3, 1, 12. (Nares by H. and W.)

Cake. v. n. Harden; become as a cake or crust.

This burning matter, as it sunk very leisurely, had time to cake together, and form the bottom, which covers the mouth of that dreadful vault that lies underneath it.—*Addison, Travels in Italy.*

He rins'd away the strings and clotted blood, And wash'd away the strings and clotted blood, That cak'd within. *Id.*

Cakebread. s. Manchet.

Ay! and eat them all too, an they were in cakebread.—*B. Jonson, Bartholomew Fair,* v. 3. (Nares by H. and W.)

Caking. part. adj. Forming a crust or cake.

Dr. Thompson arranges the different kind of British coal under the following divisions: (1) *caking* coal; (2) splintery coal; (3) cherry coal, which is less hard and more slaty in fracture, and cannell coal; such as that from Wigan in Lancashire.—*Brande, Manual of Chemistry.*

Calabash. s. [Spanish, *calabaza* = gourd.]

Vessel made of a dried gourd.

One mighty monarch, the Lewis the Great of the isthmus, who wore with pride a cap of white reeds lined with red silk and adorned with an ostrich feather, seemed well inclined to the strangers, received them hospitably in a palace built of canes and covered with palmetto royal, and regaled them with *calabashes* of a sort of ale brewed from Indian corn and potatoes.—*Macaulay, History of England,* ch. xxiv.

Calamanco. s. [see last extract.] Kind of woollen stuff.

He was of a bulk and stature larger than ordinary, had a red coat, flung open to shew a *calamanco* waistcoat.—*Tailor.*

Calamanco [is] a woollen stuff manufactured in Brabant and in Flanders. . . . It is commonly woven wholly of wool; there are some, however, wherein the warp is mixed with silk; and others with goats' hair. There are *calamancos* of all colours, and diversely wrought. Some are quite plain; others have

broad stripes adorned with flowers. . . . This has been also no inconsiderable branch of the woollen manufacture in England.—*Rees, Cyclopaedia,* in voce. [In the Latin of the middle ages are found *camelauicum, calamauicum, calamauicum, capitis integumentum et pilci genus ex camelorum pilis confectum*; a covering of the head, or kind of cap formed of camel's hair; whence some consider the word to be derived.—*Richardson,* in voce.]

Calamander (wood). s. [see second extract.] Wood of the *Diospyros hirsuta*.

Calamander wood is a beautiful fancy wood obtained from a tree which grows in Ceylon. It is extremely hard, and finely veined with different shades of black and brown. Being scarce and very dear, little is imported.—*Waterston, Dictionary of Commerce.*

The *Calamander*, the most valuable cabinet wood of the island, resembling rosewood, but much surpassing it both in beauty and durability, has, at all times, been in the greatest repute in Ceylon. It grows chiefly in the Southern provinces. . . . but heretofore has been so prodigally felled, first by the Dutch and afterwards by the English, without any precautions for planting or production, that it has at last become exceedingly rare. . . . [it] runs some risk of becoming extinct in the island; but, as it is not peculiar to Ceylon, it may be restored by fresh importations from the south-eastern coast of India, of which it is equally a native; and I apprehend that the name *Calamander*, which was used by the Dutch, is but a corruption of *Coromandel*.—*Sir J. E. Tennent, Ceylon,* pt. i. ch. iii.

Calamary. s. [Romaic, *καλμαρι* = inkstand.] Cuttlefish.

The ink-bag consists of tough white fibrous texture, the outer surface of which is coated by a thin silvery or nacreous layer; its inner surface presents a fine spongy glandular texture. It is usually of an oblong pyriform shape, . . . but it presents at certain seasons a trilobate form in the Sepioid, in which Peters has observed it to contract regularly. It is a very active organ, and its inky secretion can be reproduced with great activity. The tint of the secretion varies in different species, as is exemplified, in its inspissated state, by the Italian pigment called Sepia, and the Chinese one, called Indian ink. It is also very durable, as is shown by its frequent preservation in a fossil state in both the extinct *Calamaries* and the Belemnites. It is affirmed by some chemists to contain a peculiar animal principle, which Vizio has termed melanine.—*Owen, Lectures on Comparative Anatomy,* lect. xxiv.

Calambak. s. See Eaglewood.

Calamine. s. Ore of zinc. See extracts.

We must not omit those, which, though not of so much beauty, yet are of greater use, viz. loadstones, whetstones of all kinds, limestones, *calamine*, or 'lapis calaminaris'.—*Locke.*

The principal ores of zinc are the sulphuret called blende, the silicate called *calamine*, and the sparry *calamine*, or the carbonate. . . . *Calamine*, or the silicate of zinc, is divided into two species, the prismatic or electric *calamine*, and the rhomboidal; though they both agree in metallurgic treatment. The first has a vitreous lustre, inclining to pearly; colour white, but occasionally blue, green, yellow, or brown. . . . The second species, or rhomboidal *calamine*, is a carbonate of zinc. . . . It occurs in kidney-shaped, botryoidal, stalactitic, and other imitative forms.—*Ure, Dictionary of Arts, Manufactures, and Mines, Zinc.*

Calamint. s. [Gr. *καλαμίνθη*.] Name applied to plants of the genus *Calamintha*.

The *calamint* which groweth on mountains is of a fervent taste, and biting, hot, and of thin substance, and dry after a sort of the third degree; as Galen saith, it digesteth or wasteth away thin humors, it cutteth and maketh thicke humors thin.—*Gerarde, Herbal,* p. 688: ed. 1633.

Calamistrate. v. a. [Lat. *calamistro* = twist the hair with curling-irons.] Curl or frizzle the hair.

Which belike makes our Venetian ladies, at this day, to counterfeit yellow hair so much; great women to *calamistrate* and curl it up, to adorn their heads with spangles, pearls, and made-flowers; and all courtiers to affect a pleasing grace in this kind.—*Burton, Anatomy of Melancholy,* p. 469.

Calamistración. s. Act or process of curling the hair. *Obsolete.*

Calamitous. adj. Miserable; ill-omened; unfortunate; unhappy; wretched.

Applied to men.

This is a graciots provision God Almighty hath made in favour of the necessitous and *calamitous*; the state of some in this life, being so extremely wretched and deplorable, if compared with others.—*Calamy.*

Applied to external circumstances.

What *calamitous* effects the air of this city wrought upon us the last year, you may read in my discourse of the plague.—*Harvey, Discourse of Consumption.*

Strict necessity Subdues me, and *calamitous* constraint! Lest on my head both sin and punishment, However insupportable, be all Devolv'd. *Milton, Paradise Lost,* x. 131.

Much rather I shall chuse To live the poorest in my tribe, than richest, And be in that *calamitous* prison left.

Id., Samson Agonistes, 1478.
In this sad and *calamitous* condition, deliverance from an oppressor would have even revived them.—*South.*

Calamity. s. [Fr. *calamité*; Lat. *calamitas*.—see, also, extract from Bacon.] Misfortune; cause of misery; distress.

Another ill accident is drought, and the spindling of the corn, which with us is rare, but in hotter countries common; inasmuch as the word *calamity* was first derived from *calamus* when the corn could not get out of the stalk.—*Bacon.*

This infinite *calamity* shall cause To human life, and household peace confound.

Milton, Paradise Lost, x. 907.

From adverse shores in safety let her hear Foreign *calamity* and distant war; Of which, great Heaven, let her no portion bear. *Prior.*

Calamus. s. [Lat. = reed, cane, stalk.] Sweet flag (*Acorus Calamus*), a native plant belonging to the Aroidae.

Take thou also unto thee principal spices of pure myrrh, of sweet cinnamon, and of sweet *calamus*.—*Exodus,* xxx. 23.

Calash. s. [Fr. *calèche*.]

1. Four-wheeled carriage; originally, and perhaps generally, with a head.

Daniel, a sprightly swain, that us'd to slash The vigorous steeds that drew his lord's *calash*. *King.*

The ancients used *calashes*, the figures of several of them being to be seen on ancient monuments. They are very simple, light, and drove by the traveller himself.—*Arbuthnot, Tables of Ancient Coins, Weights, and Measures.*

Mr. Vanslyperken was up at daylight, and dressed in his uniform; he put in his pocket all the copies of the Jacobite correspondence, and went on shore—hired a *calash*, for he did not know how to ride, and set off for the Hague, where he arrived about ten o'clock.—*Marryat, Snarleygown,* vol. iii. ch. ix.

2. Covering to protect the head of a lady full dressed: (generally made of silk supported with hoops of cane or whalebone, and projecting considerably over the face).

Thus, throughout the passage from the Ferry, she pettishly repulsed his caresses and kind words, and pleading, not without acrimony of tone, that she had a headache and desired to be left in peace, she duded her *calash* over her head, and sat as far away from him as the limited space permitted, like a pretty mutinous child.—*Sala, The Ship-Chandler.*

Calathian (violet). s. Plant so called (*Gentiana Pneumonanthe*), native, though rare.

It is called *Viola autumnalis*, or autumnal violet, and seemeth to be the same that Valerius Cordus calleth *Pneumonanthe*, which he says is named in the German tongue *Lungen Blumen*, or lung-floure; in English, Autumn Belflores, *Calathian Violets*, and of some Harvest-bells.—*Gerarde, Herbal,* p. 438: ed. 1633.

As the Gentian under notice has *Pneumonanthe* for its specific name, the term *Calathian* is attached to it in the ordinary Floras. It is doubtful, however, whether the application be real, i.e. whether it belong to the popular language of England. The exact plant meant by Pliny (N. H. xxi. 14) is uncertain. It was, probably, no true *Viola*. 'In totum vero sine odore, minutoque folio *Calathiana*, munus autumnni, cætera veris.'

Calcareous. adj. Partaking of the nature or qualities of lime.

On the east side is a stratum of bones of all sizes, belonging to various animals and fowls, enashed in an incrustation of a reddish *calcareous* rock.—*Swinburne, Travels in Spain,* let. 29.

Soils consist of different combinations of two or more of the four primitive earths: namely, the *calcareous*, which I sometimes call mild calx; *magnesia*; argil; and the silicious.—*Kirwan, On Manures,* l. § 1.

Thus the botanist tells us of *Ixias*, *Stapelia*, *Mesembryanthemum*, *Pelargonium*, and *Euphorbia*, as concentrated in Southern Africa; of *Magnolia* in Central America, of *Calceolaria* in the Andes; of *Myrtles*, *Banksias*, *Mimosas*, and *Eucalypti*, in Australia; and of the Bread-fruit trees in the South Sea Islands, &c.—*T. V. Wollaston, On the Variation of Species*, p. 142.

Calcifaction. *s.* Conversion into lime.

When the calcareous matter has been dissolved away from a very thin lamella of bone and the remaining substance is carefully examined, it is found to consist, not (as is commonly stated) of cartilage, but of a substance made up of indistinct fibres interwoven with each other. These fibres correspond in appearance and composition with those of the white fibrous tissue; and it seems probable that the solid mass of fully formed bone is formed by the calcification of this tissue.—*Carpenter, Principles of Physiology*, p. 203.

Calcifed. *part. adj.* Constituted of, or characterized by, lime.

A tooth is a hard body attached to the mouth or commencement of the alimentary canal, partially exposed, when developed. *Calcifed* teeth are peculiar to the vertebrates, and may be defined as bodies primarily, if not permanently, distinct from the skeleton, consisting of a cellular and tubular basis of animal matter containing earthy particles, a fluid, and a vascular pulp.—*Owen, Anatomy of Vertebrates*.

Calcity. *v. a.* [Lat. *calx*, *calcis* = lime, *fit* = become.] Convert into lime.

If we compare the dental system of *Lepidosiren* with that in *Batrachia*, it is to the larval state of the anouans that an analogy may be found: the tadpole of the frog having its maxilla and mandibula each sheathed with a continuous horny trenchant covering. Were this sheath actually dentinal in tissue and united to the jaw-bone, the resemblance to the *Lepidosiren* would be closer; but it is never *calcifed*, and is shed during the progress of the metamorphosis.—*Owen, Anatomy of Vertebrates*.

Calcinable. *adj.* Capable of being, or liable to be, calcined.

Not fermenting with acids, and imperfectly *calcinable* in a great fire.—*Hill, On Fossils, Granite*.

This may be effected, but not without a *calcinat*ion, or reducing it by art into a subtle powder.—*Sir T. Browne, Vulgar Errors*.

*Calcinat*ion is the chemical process of subjecting metallic bodies to heat with access of air, whereby they are converted into a pulverulent matter somewhat like lime in appearance, called *calx* in Latin. The term *calcinat*ion, however, is now used when any substance whatever is exposed to a roasting heat.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Calcine. *v. a.* Reduce to a *Calx*; reduce to ashes; burn up.

It [a fever] doth not only melt him, but *calcine* him, reduce him to ashes and to atoms.—*Donne, Devotions*, p. 23.

The solids seem to be earth, bound together with some oil; for if a bone be *calcin'd*, so as the least force will crumble it, being immersed in oil, it will grow firm again.—*Arbutnot, On the Nature and Choice of Aliments*.

Calcine. *v. n.* (both in the active and neuter forms of this verb, the accentuation of the previous editions is *Calcine*.) Become a *calx*.

This crystal is a pellucid fissile stone, clear as water, and without colour, enduring a red heat without losing its transparency, and, in a very strong heat, *calcin*ing without fusion.—*Sir I. Newton, Opticks*.

Calcinat. *part. adj.* Reduced by calcination. He put up the ashes into several glasses, sealed hermetically, and written upon with the several names of the *calcin'd* herbs.—*Gregory Posthuma*, p. 70.

When it was urged that the reduction of a metal

from a *calcin'd* to a metallic form could not consist in the addition of phlogiston, because the metal was lighter than the *calx* had been; it was replied by some, that this was not conclusive for that phlogiston was a principle of levity, diminishing the weight of the body to which it was added.—*Whewell, History of Scientific Ideas*, ii. 34.

Calcitratio. *s.* [Lat. *calcitratio*, -onis, from *calcitro* = kick, from *calx* = heel.] Act of kicking. *Rare.*

The birth of the child is caused partly by its *calcitratio*, breaking the membranes in which it lieth.—*Ross, Arcana Microscopi*, p. 52; 1652.

Calcium. *s.* [from *calx*, *calcis* = lime; the final -um belonging to the artificial language of Chemistry, and denoting the metallic character of the substance to which it applies.] Metal so called; metallic basis of lime.

Davy obtained evidence of the existence of this metal [*calcium*], and of its analogy to the preceding metals. . . . The hydrate of peroxide of *calcium* precipitates on adding lime water, drop by drop, to a solution of peroxide of hydrogen.—*Graham, Elements of Chemistry*.

Calcography. *s.* [see Chalcography.] Art of engraving on brass.

The histories of refining; of making coppers; of making alum; of *calcography*; of enamelling;—*Bishop Sprat, History of the Royal Society*, p. 258.

Calculable. *adj.* Capable of being calculated.

The deposit of peat, or of rolled pebbles and stratified sand; the removal of other similar deposits already bedded. . . . the introduction and operation of various forces, visible and *calculable*; the mode in which rocks are undermined, weathered, broken up, and carried up in fragments by the sea. . . . these together form a class of phenomena, which are, as it were, the very grammar of geology.—*Anted, The Channel Islands*, p. 249.

Calculary. *adj.* Relating to the disease called Calculus, or the stone.

Motion was tedious and noxious to him, by reason of his *calculary* infirmity and corpulency.—*Bishop Gauden, Life of Bishop Brownrigg*, p. 215; 1660.

Calculating. *part. adj.*

1. With the power or habit of calculating.
The American *calculating* boy, Zerah Colburn, was asked how many black beans it would take to make ten white ones; to which he very properly answered, 'Ten if you skin them;' but the ten-skinned beans would not be the same beans as before, except, indeed, to those to whom black is white.—*De Morgan, Formal Logic*, ch. iii. note.

Such are the facts which, by a certain adjustment of the *calculating* engine, would be presented to the observer.—*Babbage, Ninth Bridgewater Treatise*, ch. ii.

2. Farseeing; with an eye to the main chance: (with a *disparaging* rather than a complimentary import).

Calculus. *s. pl. calculi.* [Lat. = pebble used in counting; and hence the basis of the whole class of words connected with number in general.]

1. In Mathematics. Generic name for the method of investigating indefinitely small variable quantities, and, as such, the equivalent to Fluxions; originally continental rather than English, but now generally not only adopted but extended in its application. See last extract; see, also, Differential and Integral.

When such processes as Newton thus deduced from the conception of a limit, are represented by means of general algebraical symbols instead of geometrical diagrams, we have then before us the method of fluxions, or the differential *calculus*; a mode of treating mathematical problems justly considered as the principal weapon by which the splendid triumphs of modern mathematics have been achieved.—*Whewell, History of Scientific Ideas*, i. 153.

On the continent, the advantages offered by a familiar use of symbols, and by attention to their symmetry and other relations, were accepted without reserve. In this manner the differential *calculus* of Leibnitz, which was in its origin and significance identical with the method of fluxions of Newton, soon surpassed its rival in the extent and generality of its application to problems. This *calculus* was applied to the science of mechanics, to which it, along with the symmetrical use of co-ordinates, gave a new form; for it was soon seen that the most difficult problems might, in general, be reduced to finding integrals, which is the reciprocal process of that by which differentials are found; so that all difficulties of physical astronomy were reduced to difficulties of symbolical calculation, these indeed, being often sufficiently stubborn.—*Ibid.*, p. 163.

It is designed . . . to give expression . . . to the fundamental laws of reasoning in the symbolical language of a *calculus*. . . . These considerations furnish a sufficient answer to all protests against the exhibition of logic in the form of a *calculus*.—*Boole, Investigation of the Laws of Thought*, ch. i.

2. In Medicine. Here nearly retaining its original sense of pebble or small stone, and applied to certain concretions; more especially (a) Urinary, or concretions in the bladder, and (b) Biliary, or concretions in the gall-duets. Hence = Stone (in Bladder) and Gall-stone (q.v.).

Heberden agrees with him [Hall] in admitting that whilst urinary *calculi* are much more common in the male, biliary concretions are most frequent in the female sex. . . . *Calculi* in the gall-bladder seldom give rise to any marked or definite symptoms, unless they are very large.—*Copland, Dictionary of Practical Medicine*, in voce Concretions, Biliary.

Caldron. s. (sometimes, and that on good grounds, pronounced with *al* sounded as the *al* in *falcon*, i. e. *faucun*.) [Fr. *chaudron*.] Pot; boiler; kettle.

In the midst of all
There placed was a caldron wide and tall,
Upon a mighty furnace, burning hot.

Spenser, Faerie Queen.

Let this lamp of zeal never go out in the temple of thy soul; cherish it with daily supplies from that ocean which is never dry, but abounds, and will increase thee, while thou seekest in humility to be enabled to a devout lustre and calefaction of others.—*Waterhouse, Apology for Learning*, p. 135: 1853.

Every flatuous calefaction of the brain, whence-soever it arise, is apt to make a man ecstatic.—*J. Spencer, Vanity of Vulgar Prophecies*, p. 105.

1. Register containing the order of seasons, months, festivals, and holidays, throughout the year.

What hath this day deserved? what hath it done,
That it in golden letter should be set
Among the high tides, in the calendar?

Shakespeare, King John, iii. 1.
We compute from calendars differing from one another; the compute of the one anticipating that of the other.—*Sir T. Browne*.

Curs'd be the day when first I did appear;
Let it be blotted from the calendar.

Dryden, Fables.
But the distinguishing brother, for whom we shall hereafter find a name, now his hand was in, proved by a very good argument that K was a modern illegitimate letter, unknown to the learned-ages, nor anywhere to be found in ancient manuscripts. It is true, said he, the word *Calendar* hath Q[uibusdam] V[eteribus] C[odiciibus] been sometimes written with a K, but erroneously; for in the best copies it hath ever been spelt with a C. And, by consequence, it was a gross mistake in our language to spell Knot with a K; but from henceforward he would take care it should be written with a C.—*Swift, Tale of a Tub*.

2. List of prisoners for trial.

Rhadamanthus, who tries the lighter causes below, leaving to his two brethren the heavy calendars... after a lenient castigation, with rods lighter than those of Medusean ringlets, but just enough to 'whip the offending Adam out of thee,' shall courteously dismiss thee at the right hand gate—the o. p. side of Hades—that conducts to masques and merry-makings in the Theatre Royal of Prosperpine.—*Lamb, Last Essays of Elia*.

Calendar. v. a. Enter in a calendar.

ments connected with property, pedigree . . . I shall now proceed to shew, . . . have been *calendarized* in these volumes in a style which would not be tolerated in the calendars of State Papers and Letters published under the Treasury in England.—*On the History, Position, and Treatment of the Public Records of Ireland*: by an Irish Archivist.

Calendarizing. v. a. Act of entering in a calendar.

The Council of the Irish Archeological and Celtic Society, by its action at this juncture, has added another to its many recognised merits. These eminent noblemen and scholars have presented to the Treasury a memorial advocating the concentrating and *calendarizing* of all the scattered Public Records of Ireland, and dwelling with emphasis on the necessity of providing that the execution of such arrangement should be entrusted to scholars of learning and known skill in this department of learning, so as to insure the fullest possible advantages to the public.—*On the History, Position, and Treatment of the Public Records of Ireland*: by an Irish Archivist.

Calendar, or Kalendar. s. See Caloyer.

Thirty miles in the habit of pilgrim *calendarers*.—*Thomas Herbert, Relation of some Years' travels into Africa and the Great Asia*, p. 70.

Calender. s. [from Fr. *calandre*, from Lat. *cylindrus*; Gr. *κύλινδρος* = cylinder.] Hot press; press in which clothiers smooth their cloth.

Calender is the name of a machine consisting of two or more cylinders, revolving so nearly in contact with each other, that cloth passed through between them is smoothed and glazed by their powerful pressure. It is employed either to finish goods for the market, or to prepare cotton and linen webs for the calico-printer, by rendering their surfaces level, compact, and uniform. The condensation and polish, or satinage, as the French call it, differs in degree according to the object in view. . . . The numerous accidents which have happened to the hands of workmen engaged in a calender's establishment should direct the attention towards an effective contrivance for preventing such misfortunes.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Used adjectively.

As a matter of accommodation the different processes of packing, cording of boxes, sheeting of trunks, and, in general, all the arrangements preparatory to shipments, and also the intimations and surveys necessary for obtaining drawbacks, debentures, or bounties, according to the excise laws, are generally conducted at the *calender* houses, where goods are finished. These operations sufficiently account for the general meaning attached to the word.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Calender. s. (*Calenderer* would be the more correct form.) One who calenders.

I am a linen-draper bold,

As all the world does know,

And my good friend the *calender*

Will lend his horse to go. *Cowper, John Gilpin*.

Calender. v. a. Submit cotton or linen cloth to the action of the calender.

When *calendered* the pieces are packed and stamped.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Calendering. verbal abs. Process by which anything is calendered.

For the first course of the printers, where high *calendering* is necessary, the goods are usually passed through between two paper cylinders, to give that equality of surface which could not be obtained by one passage, however strong the pressure.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Calends. s. [Lat. *calendæ* = first day of the Roman month.] Register; record. *Rhetorical, rare*.

Such thoughts, and such deep-piercing darts,

As in the beauty of their eye

Harbour nought but flattery!

Their tears are drawn that drop deceit,

Their faces *calends* of all sleight,

Their smiles are lures, their looks guile,

And all their love is but a wile. *E. Greene, Poems*.

Calenture. s. [Medical Latin, *calentura*, from *caleo* = be hot; as implying either fever or a tropical climate.] Distemper peculiar to sailors in hot climates, wherein they imagine the sea to be green fields, and will throw themselves into it.

And for that lethargy was there no cure,

But to be cast into a *calenture*. *Sir J. Denham*.

So, by a *calenture* misled,

The mariner with rapture sees,

On the smooth ocean's azure bed,

Enamelled fields, and verdant trees;

With eager haste, he longs to rove
In that fantastick scene, and thinks
It must be some enchanted grove;
And in he leaps, and down he sinks. *Swift*.

Calf. s. [see extract] Fleishy part of the muscles in man between the knee and the ankle.

Mr. Didapper, or Beau Didapper, was a young gentleman of about four feet five inches in height. He wore his own hair, tho' the scarcity of it might have given him sufficient excuse for a perriwig. His face was thin and pale; the shape of his body and legs none of the best; for he had very narrow shoulders and no calf; and his gait might more properly be called hopping than walking.—*Fielding, Adventures of Joseph Andrews*.

[*Calf* of the leg. Gaelic *calpa*, *calba*, or *colpa na coise*, the calf of the leg. The primary meaning of the word seems simply a lump. *Calp* is *riadh*, principal and interest, the lump and the increase. It is another form of the English *collop* or *gollop*, a lump or large piece, especially of something soft. The calf of the leg is the collop of flesh belonging to that member. In like manner the English *dallop* is related to Welsh *talp*, a lump. The Latin analogue is *pulpa*; *pulpa cruris*, the fleshy part of the leg; *pulpa ligni*, Dutch *kalf'shout*, the pith or soft part of wood. Icelandic *kalf*, the calf of the leg.—*Wedgwood, Dictionary of English Etymology*.]

Calf (of the lips). [? ? ?]

Turn to the Lord, and say unto him, Take away all iniquity, and receive us graciously: so will we render the calves of our lips.—*Hosea*, xiv. 2.

The colt hath about four years of growth; and so the fawn, and so the calf.—*Bacon, Natural and Experimental History*.

Ah! Blouzelmd, I love thee more by half,

Than does their fawns, or cows the new-fall'n calf. *Gay*.

In the first three days after birth, the little animal, called a calf, is so helpless that it may be taken with the hand.—*C. Boner, Forest Creatures, The Stag*.

2. Dolt; stupid person.

These, when a child haps to be got

That after proves an idiot,

When folk perceive it thriveth not,

The fault therein to smother;

Some silly doating brainless calf

That understands things by the half,

Say, that the fairy left this aulf.

And took away the other. *Drayton, Nymphidia*

Calfbound. adj. Bound, as books, in calf-skin leather.

I have been toiling and molling lat *p*, for a purpose, among dusty old bookstall treasures, and assiduously collected as many tattered, dog's-eared, once calf-bound volumes as I could find of the British essayists of the eighteenth century.—*Sala, Secret of Muley Mogrebbin Beg*.

Calflike. adj. Resembling a calf.

Calfskin. s.

1. Skin of the calf; leather for shoemaking and bookbinding made thereof.

Our landlord having reconnoitred the shoes he had left, which indeed hardly deserved that name, 'Pray,' said he, 'Mr. Birkin, were not your boots made of calf-skin?' 'Calf-skin or cow-skin,' replied the other, 'I'll find a slip of sheep-skin that will do his business.'—*Smollett, Expedition of Humphry Clinker*.

'Aberton,' said Vincent, in answer to my question, if he knew that amiable young gentleman—'Yes! a sort of man who, speaking of the best society, says we—who sticks his best cards on his chimney-piece, and writes himself billets-doux from duchesses. A duodecimo of 'precious conceits,' bound in calf skin—I know the man well; does he not dress decently, Pelham?'—*Sir E. L. Bulwer, Pelham*.

Caliber. s. [Fr. *calibre*, with accent and spelling changed.] Bore; diameter of the barrel of a gun; diameter of a bullet.

Calibre. s. [Fr. *calibre*, with accent and spelling retained.] Cast; turn; stamp.

Brethren, whose subjects are ye? Did ye swear your oath of fidelity, homage, and supremacy to the distempered heads of Kimbolton, Hampden, Sir Henry Vane, and others of such calibre?—*Drummond, Σκιαμαχία, 199. (Ord MS.)*

Coming from men of their calibre, they were highly mischievous.—*Burke.*

[*Calibre. Caliver. Caliper.* French, *calibre*; Italian, *calibro*, *colibro*, the bore of a cannon; English, *caliper*-compasses, compasses contrived to measure the diameter of the bore. The earlier sense seems to be that of the Old English *caliver*, an arquebuss or small cannon, the name of which was probably transmitted from the French *calibre*, a machine for casting stones, whence also the name of the carbine is supposed to be derived. It was natural that the names of the old siege machines for casting stones, should be transferred to more efficient kinds of ordnance brought into use after the discovery of gunpowder. Thus the *musquet*, Italian *moschetta*, was originally a missile discharged from some kind of spring machine. . . . The name of the *calibre* as a projectile engine is probably a corruption of the simpler form *cabre*, from *cabra*, a goat, as the Portuguese has both *cabre* and *calibre* in the derivative sense of a cable. . . . The reason why the name of the goat is used to designate a machine for casting stones is probably that the term was first applied to a battering-ram, in German *bock*, a he-goat, a machine named by the most obvious analogy after the goat and the ram, whose mode of attack is to rush violently with their heads against their opponent. From the battering-ram, the earliest instrument of mural attack, the name might naturally be transferred to the more complicated machines by which large stones were thrown, and from them it seems to have descended to the harmless cranes or crabs of our mercantile times, designated in the case of the German *bock*, as in that of the French *chèvre*, by the name of the goat.—*Wedgwood, Dictionary of English Etymology.*]

Calice. s. Same as Chalice.

There is a natural analogy between the ablution of the body and the purification of the soul; between eating the holy bread and drinking the sacred calice, and a participation of the body and blood of Christ.—*Jeremy Taylor.*

Calico. s. [from *Calicut* in India.] Texture so called, made of cotton.

I wear the hoop petticoat, and am all in calicoes, when the finest are in silks.—*Addison, Spectator.*

Used adjectively.

Was it not a shame to see a gentleman, whose ancestors had worn nothing but stuffs made by English workmen out of English fleeces, flaunting in a calico shirt and a pair of silk stockings from Moorsheadabad?—*Macaulay, History of England, ch. xviii.*

Calico-printer. s. One who practises the art of calico-printing.

Suppose an ingenious gentleman should write a poem of advice to a calico-printer; do you think there is a girl in England, that would wear anything but the taking of Lisle, or the battle of Oudenarde?—*Tatler, no. 3.*

Cannot we like Sempronius, without sitting down to chess with her eternal brother; or know Sulpicia without knowing all the round of her card-playing relations?—must my friend's brethren of necessity be mine also? must we be hand and glove with Dick Selby the parson, or Jack Selby the calico-printer, because W. S., who is neither, but a ripe wit and a critic, has the misfortune to claim a common parentage with them?—*Lamb, Essays of Elia, Popular Fallacies.*

Calico-printing. s. See extract.

Calico-printing is the art of impressing cotton cloth with topical dyes of more or less permanence. Of late years silk and woollen fabrics have been made the subjects of a similar style of dyeing. Linens were formerly stained with various coloured

designs; but since the modern improvements in the manufacture of cotton cloths, they are seldom printed. . . . *Calico-printing* has been for several hundred years practised by the Oriental methods in Asia Minor and the Levant; but it was unknown as an English art till 1696, when a small print-ground was formed on the banks of the Thames, near Richmond, by a Frenchman. . . . The sapient legislators of day . . . enacted in 1720 an absurd sumptuary law, prohibiting the wearing of all printed calicoes whatsoever, either of foreign or domestic origin.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Callæsthetics. s. Proposed term for Esthetics.
Since, however, æsthetics would naturally denote the doctrine of perception in general; since this doctrine requires a name; since the term æsthetics has actually been applied to it by other German writers (as Kant); and since the essential point in the philosophy now spoken of (the theory of the Fine Arts) is that it attends to beauty,—it appears desirable to change this name. In pursuance of the maxim now before us, I should propose the term *Callæsthetics*, or rather *Callæsthetic*, the science of the perception of beauty.—*Whewell, Novum Organon renovatum, p. 345.*

Callet. s. [see last extract.] Loose woman. Obsolete or provincial.

I shall breake your palettes,
Without ye now cease;
And so was made the drunken peace.

Could not have laid such terms upon his *callet*.

[*Callet*. A prostitute. Gaelic, *caile*, a girl, hussey, quean, strumpet. French, *caillotte*, femme frivole et babilarde. (Dict. Langued.) The French uses the quail as the type of an amorous nature. 'Chaud comme une quaille.' (Cotgrave.) *Caillé-coiffée*, a woman. The Slavonic languages have the same metaphor. Calligraphic. adj. Relating to beautiful, or ornamental, writing.
At the end is an inscription, importing the writer's name, and his excellence in the *calligraphic* art.—*T. Warton, History of English Poetry.*

Calligraphy. s. [Gr. *καλλιγραφία* = beautiful writing, and, on better authority, *καλλιγράφος* = beautiful writer, in the way of hand-writing. Other compounds of *καλλ-* (i. e. the forms with *λλ*) are older still, e. g. in Homer, *καλλιγύναιξ* = abounding in beautiful women. These facts we take the word as we find it in such writers as Ben

Jonson, Lamb, and Warton; all scholars. Nevertheless, as compared with other compounds of a similar meaning, the composition is, at the first view, exceptionable. Taking such a word as Orthography for a type, we infer that for 'beautiful writing' the first element ought to be the adjective *καλός* with a single *λ*, and the connecting vowel *ο*, giving Kalography.

Again, compounds of *γράφω* with a substantive give to the Verb the sense of describing, or rather writing, whilst the Noun conveys the name of the thing described; e. g. Geography = description of the earth. Calligraphy, however, is the current form, Caligraphy being, in every respect, wrong.] Beautiful, ornamental, or ornamented, writing.

My *calligraphy*, a fair hand,
Fit for a secretary. *B. Jonson, Magnetic Lady.*
I have kept deluding myself with the idea that Mary would write to you, but she is so lazy (or I believe the true state of the case, so diffident), that it must revert to me as usual: though she writes a pretty good style, and has some notion of the force of words, she is not always so certain of the true orthography of them; and that, and a poor hand-writing (in this age of female *calligraphy*), often deters her, where no other reason does.—*Lamb, Letter to Wordsworth.*

Previous to the invention of printing, the art of *calligraphy* was of great importance. It was the custom and pride of the large religious establishments to have the books used in the celebration of Divine Service exquisitely written and adorned with miniatures. . . . The sister art of *calligraphy* and miniature-painting flourished simultaneously in Italy and in the countries north of the Alps.—*Mrs. Merrifield, Original Treatises, &c., on the Art of Painting, introd. ch. ii.*

Calling. verbal abs.

1. Summoning; convocation.
Having no express testimony against Buckingham, they came to a vote that common fame is a good ground of proceeding either by inquiry or presenting the complaint to the king or lords; nor did a speech from the lord-keeper, severely rating their presumption, . . . nor one from the king himself, bidding them 'remember that parliaments were altogether in his power for their *calling*, sitting, and dissolution' . . . tend to pacify or to intimidate the assembly.—*Hallam, History of England, vol. i. ch. vi.*

2. Vocation; profession; trade; proper station or employment.
If God has interwoven such a pleasure with our ordinary *calling*, how much superior must that be which arises from the survey of a pious life? Surely, as much as christianity is nobler than a trade.—*South.*

I cannot forbear warning you against endeavouring at wit in your sermons; because many of your *callings* have made themselves ridiculous by attempting it.—*Swift.*

I left no *calling* for this idle trade,
No duty broke, no father disobey'd.
Pope.

People who lived at a distance from the great theatre of political contention could be kept regularly informed of what was passing there only by means of newsletters. To prepare such letters became a *calling* in London, as it now is among the natives of India.—*Macaulay, History of England, ch. iii.*

At length he had turned pander, had exceeded even the ordinary villainess of his vile *calling*, and had received money from dissolute young gentlemen commoners for services such as it is not good that history should record.—*Ibid. ch. viii.*

3. Class of persons united by the same employment or profession.

CALL

Callisthénic. *adj.* Pertaining to Callisthenics.

Callisthénic. *s.* [Gr. κάλλος = beauty, σθένος = strength.] Term proposed to denote a system of Gymnastics, with special reference to the development of a fine form. *Scarcely current.*

Callnote. *s.* Note naturally used by the male bird to call the female; artificially applied, by birdcatchers, as a decoy.

He may also capture the mountain finch by the call of the chaffinch, as well as the lesser redpole and citril by the *call-note* of the siskin.—*Translation* (edited by Adams) of *Bechstein's Chamber and Cage Birds*, introd.

Callosity. *s.* [Lat. *callositas*, from *callosus*, from *callus* or *callum* = hardened skin.] Thickening and hardening of the skin, often giving it a horny appearance; from the impairing of the sense of touch thus caused, the notion of insensibility is suggested.

The surgeon ought to vary the diet of his patient, as he finds the fibres loosen too much, are too flaccid, and produce funguses, or as they harden and produce *callosities*; in the first case, wine and spirituous liquors are useful, in the last harmful.—*Arbuthnot, On the Nature and Choice of Aliments.*

Applied, *int. surg.*, to the indolent thickening at the edge of a wound or ulcer; in *Zoology*, to certain natural growths on different parts of different animals, e.g. the buttocks of certain apes, and the legs of horses and camels.

On looking to the more obvious marks of discriminating the minor groups of the particular family now before us,—the Simiadae,—we find that the apes have no cheek-pouches, scarcely any naked spaces or *callosities* on their buttocks, and (with but one exception) no tails; the fore feet or arms are also much longer than the hinder. The apes, monkeys, on the contrary, have all of them cheek-pouches, naked *callosities*, and long tails. . . . At the head of the quadrumanous order stands the genus Simia, in its most restricted and prominent sense; that is, containing only those animals which, like the orang-outang, being destitute of cheek-pouches, *callosities*, or tail, evince a stronger analogy to the structure of man than do any other of the monkey tribe. . . . The gibbons, in general, have no naked *callosities*; but as nature is now progressing towards another form, we find a slight indication of this character in the Hylobates Lar, and one or two others; a circumstance which renders the transition to the sub-genus Presbytes more easy: this singular type, which agrees with all the former in its want of cheek-pouches, and its elevated forehead, has been placed next to the gibbons, although it is the only example in this group where the tail is developed. Like the gibbons, however, its arms are excessively long; and as some of these latter have small *callosities*, the only exclusive distinction of Presbytes is its tail.—*Swainson, Natural History and Classification of Quadrupeds*, §§ 77, 78.

Callous. *adj.* Thickened and hardened.

In progress of time, the ulcers became sinuous and *callous*, with induration of the glands.—*Wiseman, Surgery.*

The wretch is drench'd too deep, His soul is stupid, and his heart asleep: Fatten'd in vice, so *callous* and so gross, He sins, and sees not, senseless of his loss. *Dryden.* He has put on the strong armour of sickness, he is wrapt in the *callous* hide of suffering; he keeps his sympathy, like some curious vintage, under trusty lock and key, for his own use only.—*Lamb, Last Essays of Elia, The Convalescent.*

Callousness. *s.*

1. Hardness; induration of the fibres.

ultation, ought they not to be esteemed destitute of common sense, and abandoned to a *callousness* and numbness of soul?—*Bentley.*

Every pilot

Can steer the ship in *calms*. *Sir J. Denham.*

Applied to the passions.

Great and strange *calms* usually portend the most

violent storms; and therefore, since storms and

calms do always follow one another, certainly, of the

two, it is much more eligible to have the storm first,

and the *calm* afterwards: since a *calm* before a

storm is commonly a peace of a man's own making;

but a *calm* after a storm, a peace of God's.—*South.*

Calm. *v. a.* Still; quiet; pacify; appease.

ing the intestine storms within our breasts.—*Dr. H. More, Decay of Christian Piety.*

a cheerer of his spirits, a diverter of sadness, a *calmer*

of unquiet thoughts, a moderator of passions, a pro-

curer of contentedness.—*I. Walton, Complete Angler.*

The manufacture of this substance upon the great

scale may be performed in two ways. The cheapest

and most direct consists in mixing one eighth part

of pure quicksilver with one part of pure nitric acid.

The second manner of manufacturing *calomel*,

is to grind very carefully four parts of corrosive sub-

limate with three parts of quicksilver, adding a

little water or spirits to repress the noxious dust

during the trituration. . . . The quicksilver combines

with the deutochloride, and converts it into proto-

chloride or *calomel*.—*Ure, Dictionary of Arts, Man-*

ufactures, and Mines.

Caloric. *s.* [Fr. *calorique*; from *calor* = heat.

As an English word, this is simply a term

adopted, with a change of spelling and

accent, from the French. As a French

word, it is purely artificial and scientific;

coined for the purpose of distinguishing

heat as a physical force from heat as a

sensation.] Chemical term for heat.

What are the principles by which we are to be

guided to the true measure of heat? Here, as in all

the sciences of this class, we have the general prin-

ciple, that the secondary quality, heat, must be

supposed to be perceived in some way by a material

medium or fluid. If we take that which is, perhaps,

the simplest form of this hypothesis, that the heat

depends upon the quantity of this fluid, or *caloric*,

which is present, we shall find that we are led to pro-

positions which may serve as a foundation for a

natural measure of heat.—*Whewell, History of*

Scientific Ideas, i. 350.

A drayman, we are told, will taunt a comrade by

saying, 'you're a pretty fellow,' without having learnt

that he is employing the figure called irony; . . .

and that he will set his kettle on [the fire] to boil,

though ignorant of the theory of *caloric*, and of all

the technical vocabulary of chemistry.—*Whately,*

Elements of Rhetoric.

Calorific. *adj.* [Lat. *calorificus*.] Having the quality of producing heat; heating.

A *calorific* principle is either excited within the

heated body, or transferred to it, through any me-

diu, from some other. Silver will grow hotter

than the liquor it contains.—*Grew.*

We distinguish the attractive or gravitative pro-

perty of the earth, and its magnetic property; the

gravitative, luminiferous, and *calorific* properties of

the sun; the colour, shape, weight, and hardness of

a crystal.—*J. S. Mill, System of Logic*, iii. 5, 7.

Calorific. *adj.* Same as Calorific. *Rare.*

This I find concerning dew, as it is of a *calorific*

nature.—*Swan, Speculum Mundi*, p. 147. (Ord MS.)

Calorimeter. *s.* [Gr. μέτρον = measure.] In-

strument for measuring the intensity of

caloric.

It does not belong to our present purpose to speak

of instruments of which the object is to measure,

not sensible qualities, but some effect or modification

of the cause by which such qualities are produced:

such, for instance, are the *calorimeter*, employed by

Lavoisier and Laplace, in order to compare the

specific heat of different substances; and the acti-

nometer, &c.—*Whewell, History of Scientific Ideas*,

i. 350.

Calotte. *s.* [Fr.] Cap or coif worn as an

ecclesiastical ornament in France.

But we,

That tread the path of publick businesses,

Know what a tacit shrug is, or a shrink;

The wearing the *calotte*, the poltick hood,

And twenty other parerga, &c. the bye,

You seculars understand not. *B. Jonson, Magnetick Lady.*

Calotype. *s.* [Gr. κάλος = beautiful, τύπος = type, stamp.] Photographic process patented in 1841 by Mr. Fox Talbot.

A great number of modifications of the *calotype*

have been introduced, by which greater sensibility

to the chemical influences of the solar rays has been

obtained.—*Ure, Dictionary of Arts, Manufactures,*

and Mines.

Caloyer. *s.* [Romaic, καλόγερος, the γ being

sounded nearly as y.—Calender is a

corruption of this word, and, as such, is

the more truly vernacular term; indeed Caloyer can scarcely be called English. Hence the accent is left doubtful. In spelling the word with a c the ordinary practice is followed rather than approved.

Indeed there is probably no word in the English language in which the *c* is more out of place than in Caloyer. In the modern, as in the ancient, Greek it has no existence; whilst the doctrine that the word came to us through the Italian is untenable. Monk of the Greek church: (the meaning of *derwise*, often attached to the other form Calender, being incorrect).

How name ye yon lone caloyer?
His features I have scanned before
In mine own land; 'tis many a year
Since, dashing on the lonely shore,
I saw him urge as fleet a steed
As ever served a horseman's need.

Byron, *The Giaour*.

Caltrap, or Cálthrop. *s.* [A.S. *coltræppe*.]

1. Instrument made with four spikes, so disposed that, when thrown on the ground, one of them points upwards, for the purpose of checking cavalry, by wounding the horse's feet.

A *calthrop*, anciently used in war.—Blount, *1. c.* *Tenures of Land*, p. 30.
The ground about was thick sown with caltraps, which very much incommoded the shoeless Moors.—L. Addison, *Description of West Barbary*.

2. Name given to certain plants with spinous fruit, the one to which it applies most closely being the *Centaurea Calcutrapa*. (Though not mentioned by name in the actual text of the first of the following extracts, the passage is referred to in the index under the heading Caltrop.)

The first is called in Latin *Stellaria*, as, also, *Cardus stellatus*, and likewise *Cardus Calcutrapa*. . . . Matthioli saith that it is called in Italian *Calcutrippa*; in High Dutch, *Wallendistel*; in Low Dutch, *Sterre Distel*; in French, *chassetrappe*; in English, *Star-thistle*.—Gerarde, *Herball*, p. 1166; ed. 1633.

Water caltraps have long slender stalks, growing up and rising from the bottom of the water. . . . Amongst and under the leaves groweth the fruit, which is triangle'd, hard, sharp-pointed, and prickly; in shape like those hurtful engines in the warres cast in the passage of the enemy to annoy the feet of their horses, called caltraps, whereof this took the name. . . . The Grecians call it *tribollos evros*; the Latins *Tribulus aquaticus*; . . . the apothecaries *Tribulus marinus*; in High Dutch *Wasser nusz*; the Brabanters *Water noten*, and of the likeness of iron nails, Mincklers; the Frenchmen *Macres*: in English it is named *Water Caltraps*, *Salicot*, and *Water-nuts*; most do call the fruit of this *Caltraps* *Castaneæ aquatiles*, or water-chesnuts.—*Ibid.* p. 824.

Calumba-root. *s.* See Colombo-root.

Perfidious prince!—It is a calumny
To say, that Gwendolen, betrothed to Yver,
Was by her father first assur'd to Valens?

A. Phillips.

He mixes truth with falsehood, and has not forgotten the rule of calumniating strongly, that something may remain.—*Dryden, Preface to Fables*.

Calumniato. *v. a.* Slander.

He falls again to his old trade of downright calumniating our doctrine.—*Bishop Patrick, Answer to the Touchstone*, &c., p. 199.

One trade or art, even those that should be the most liberal, make it their business to disdain and calumniate another.—*Bishop Sprat*.

Calumniating. *part. adj.* Calumnious; libellous; defamatory.

Love, friendship, charity, are subject all
To envious and calumniating time.

These descriptions . . . are here delivered dispassionately and not thrown out in the heat of controversy and calumniation.—*T. Warton, Note on Milton's Silvarum Liber*.

Calumniator. *s.* Forger of accusation; slanderer.

The foul enemy and calumniator . . . whose name is the slanderous accuser of his brethren.—*Sir E. Sandys, State of Religion*.

The devil, the father of all calumniators and liars.—*Archbishop Usher, Answer to a Jesuit*, &c., p. 98.

When all these calumniators shall have spit their venom, it will be found that an unspotted life will be to them both a confutation and revenge.—*South, Sermons*, vii. 74.

He that would live clear of the envy and hatred of potent calumniators, must lay his finger upon his mouth, and keep his hand out of the ink pot.—*Sir R. L'Estrange*.

At the same time that Virgil was celebrated by Mallus, we know that Bayus and Mævius were his declared foes and calumniators.—*Addison*.

Calumniatory. *adj.* False; slanderous.

Upon admission of this passage, as you yourselves have related it in your calumniatory information.—*Bishop Mountagu, Appeal to Cesar*, p. 17.

Calumnious. *adj.* Slanderous; falsely reprehensible.

Virgil himself escapes not calumnious strokes.

Shakespeare, *Hamlet*, i. 3.

Other calumnious and false taxations have been discovered in my answer.—*Bishop Morton, Discharge of Implications*, &c., p. 159.

Whose overspreading barbarism . . . hath rendered the pure and solid law of God unbenevolent to us by its calumnious dunceries.—*Milton, Doctrine and Discipline of Divorce*, ii. 22.

Calumniously. *adv.* In a calumnious or slanderous manner.

Dealing in the case so insincerely, and calumniously, in their informations.—*Bishop Mountagu, Appeal to Cesar*, p. 26.

Calumny. *s.* [Lat. *calumniā*.] Slander; false charge; groundless accusation.

Be thou as chaste as ice, as pure as snow,
Thou shalt not escape calumny.

Shakespeare, *Hamlet*, iii. 1.

With upon.

It is a very hard calumny upon our soil or climate, to affirm, that so excellent a fruit will not grow here.—*Sir W. Temple*.

Calve. *v. n.* Bring forth a calf.

When she has calv'd, then set the dam aside,
And for the tender progeny provide.

Dryden.

Used metaphorically for any act of bringing forth; and sometimes of human beings, by way of reproach.

I would they were barbarians, as they are,
Though in Rome litter'd; not Romans, as they are not.

Though calv'd in the porch o' th' capitol.

Shakespeare, *Coriolanus*, iii. 1.

The grassy clods now calv'd, now half appear'd

The tawny lion, pawing to get free

His hinder parts. *Milton, Paradise Lost*, vii. 463.

See, also, Calving.

Calver. *v. a.* and **Calvered.** *part. adj.* [?] Cut in slices: (applied to salmon, and certain other fishes, when dressed so as to bear the knife without breaking).

My foot-boy shall eat pheasants, calver'd salmon, knots, godwits, lampreys.—*B. Jonson, Alchemist*.

Provide me then chins fried, and the salmon calver'd.—*Killegrew, Parson's Wedding*: 1664.

Calver. *v. n.* Shrink by cutting, and not fall to pieces.

His flesh, [the grayling's,] even in his worst season, is so firm, and will so easily calver, that in plain truth he is very good meat at all times.—*Cotton, Complete Angler*.

Calving. *verbal abs.* Bringing forth of calves: (in the following extract applied to whales).

In the sea between the coast of America and Kamchatka, they are now most abundant; and there from May to October, the American whalers reap a rich harvest—one, too, likely to last a little longer than elsewhere, since the Russians providently prohibit bay-whaling, a practice destructive to the cow whales about the time of calving.—*E. Forbes, Literary Papers*, p. 152.

Calvish. *adj.* Like a calf.

He was holden unworthy to be made a parish-priest, as having made a calvish answer.—*World of Wonders*, p. 240: 1608.

You seem like to Waltham's calf, that went nine miles to suck a cow; and when he came thither, the cow proved a bull: perhaps in your calvish me-

ditation you thought, for your pains in advertising the picture-mother, to have sucked her dug.—*Sheldon, Miracles of Antichrist*, p. 141.

Calx. *s.* [Latin.] Anything reduced to powder by burning, i.e. such mineral constituents, found in most substances, as resist the action of fire when everything else is burnt.

Gold, that is more dense than lead, resists peremptorily all the dividing power of fire; and will not be reduced into a calx, or lime, by such operation as reduces lead into it.—*Sir K. Digby*.

Cálx. *s.* [Lat.] Botanical term, but, probably, adopted into the current language. Its literal meaning is *cup*, whence it denotes those modifications of the leaf which, when both are present, immediately enclose the corolla. Its English synonyms, nearly obsolete, are *Cup* and *Empalement*.] See *Corolla*.

(For example see extract under *Corolla*.)

Calzoons. *s.* [Spanish, *calzónes*; Fr. *calçons*.] Drawers. *Doubtful English*.

The better sort of that sex here wear linen drawers, or calzoons.—*Sir T. Herbert, Relation of some Years Travels into Africa and the Great Asia*, p. 115.

Cam. *adj.* [Welsh, *cam*, *s.* and *adj.* = crooked or bent, and bend or flexure.

The word *cam* has long been known to be of Welsh origin. Its derivatives, however, are common to both the English and the French languages.

'Contrepoil, a contrepoil. Against the wooll, the wrong way, cleane contrary, quite *kamme*.—*Cambre*: com. crooked, houghty, bowed, *cambrell*-like, vaulted, arched, bent or built archwise.—*Cambré*, m. *é. f.* The same, *Soulers cambrez*, shoes which have hollow, raised, or Polonian heels.—*Cambrier*: to bow, crook, bend, vault, arch, or as *cambrière*.—*Cambreure*, f. A bowing, crooking, or bending; a vaulting or building archwise, or as *cambreure*. (Cotgrave).

This may arise either from the origin of the term being Anglo-Norman, or from the root *c-m* having belonged to the Celtic of Gaul as well as to that of Britain.

The spelling, as may be seen from the extract, is with *k*; and, were it not for the great extent to which the etymological principle is recognized in our orthography, it would be unobjectionable. Etymologically, however, it is a blunder. As one of the few genuine Celtic elements in English, it should be spelled as it is in Welsh, where there is no such letter as *k*; further reasons lying in the fact of the great majority of its congeners and derivatives beginning with *c*. See extract from Cotgrave: to which may be added certain English words; e.g. among proper names, the first element in *Cam-bridge*. The stream, however, to which it originally applied was not the Cam, which is remarkable for its straightness, but the more winding Grant.

The initial-letter changes, which play so important a part in Welsh grammar, encourage the change of *c* into *g*, or *cam* into *gam*: giving such phrases as *ar y cam* = at a foot pace; *o gam i gam* = step by step; *i gam o gam* = with a tottering or uneven gait. Hence the slang term *game leg* has reasonably been interpreted *crooked leg*; its origin being British. David *Gam*, the valiant Welshman of the battle of Agincourt, was probably *Crooked Davy*.

The following extracts are from the notes of Steevens and Reed on the passage in Coriolanus. They give us a shadow of a justification for the spelling with *k*; inasmuch as if *hym* were written *cym*, it would run the risk of being sounded *sym*. 'Scinditur incertum studia in contraria vulgus. The wavering commons in *hym-kam* *scinditur* are haled.' (Stanhurst, *Trans. of Aeneid*). 'All goes topsie turvie; all *kim*, *kam*; all tricks

and devices; all riddles and unknown mysteries. (Translation of Gusman de Alfarache.)] Crooked. *Obsolete.*

This is clean kam.—*Shakespeare, Coriolanus*, iii. 1.

Cámbist. s. [see extracts.] Bill-broker; one skilled in the science of exchange.

Exchange... is a subject of the first importance both in commerce and political economy. By its direct and common application... not only private fortunes are thus realised, but even public credit has been sustained by skillful *camibists*, or negotiators of bills. The word *camibist*, which is made the title of this work, may require some explanation, as it is of recent adoption in England, though long known on the Continent. *Camibista* in France, or *camibista* in Italy, Spain, and Portugal, signifies a banquier or exchange merchant. It may be further observed that *camibist* is not only a word of legitimate derivation, but is also a term much wanted in the English language, as there is none other to express the same meaning except *Exchange*, which seems too general and indefinite. *Kelly, The Universal Cambist and Commercial Instructor, being a general Treatise on Exchange*, pref.: 1811.

Cambio, an Italian word which signifies exchange. *Camibist*, a name given in France to those who trade on bills of exchange. The word *camibist*, though a term of antiquity, is even now a technical word of some use among merchant traders and bankers.—*Rees, Cyclopadia*, in voce.

Cámbium. s. [?] In Botany. Mucilaginous matter between the bark and wood of trees.

Beneath the liber, and above the wood, is interposed in the spring a mucous viscid layer, which, when highly magnified, is found to contain numerous minute transparent granules, and to exhibit faint traces of a delicate cellular organization. This secretion is named *camibium*, and appears to be exuded both by the bark and wood. Dutrochet says only by the former, founding his opinion upon the presence of *camibium* in bark nodules, which he says have no communication with the wood of the parent tree. Although the name of *camibium* was originally given to the mucous secretion found in the spring between the bark and wood of exogens; yet it is, in truth, nothing more than the organised or generative sap, which occurs in all the living parts of plants, and out of which new organs are formed. It is, therefore, here introduced in connection with bark merely in compliance with custom. *Leveillé, Introduction to Botany*, b. i. ch. i. sect. 2.

Cámbrel. s. Mentioned by Warburton as a derivative of *cam*; but without any definite explanation; the fact of its meaning something crooked being an inference from the etymology rather than an ascertained fact. Among butchers and pigkillers, in some parts of the country at least, *cambrél*, or *camerell*, means that piece of wood, slightly bent or bowed, but not remarkable for its crookedness, by which slaughtered animals are hung up by their hind legs.

Cámbrie. s. [from *Cambray*, in Flanders, where it was principally made.] Kind of fine linen used for ruffles, and for women's sleeves, caps, &c.

He hath ribbons of all the colours of the rainbow; inks, caddises, *cambricks*, and lawns.—*Shakespeare, Winter's Tale*, iv. 3.

Rebecca had, by the use of a looking-glass, and by the further use of certain attire, made of *cambrick*, upon her head, attain'd to an evil art.—*Tatler*.

An excellent imitation of this fabric is made in Lancashire, woven from the fine cotton yarn hard-twisted. Linen *cambric* of a good quality is also now manufactured in the United Kingdom from power-spun flax.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Used adjectivally.

Confed'rate in the cheat, they draw the throng, And *cambrick* handkerchiefs reward the song. *Gay*.

Cámel. s. [Lat. *camelus*.] Animal so called.

Considered scientifically, they [the camels] have several peculiarities. Instead, says M. Cuvier, of the great hoof, flattened on the internal side, which envelops the whole lower part of each toe, and determines the figure of the ordinary cleft foot, they have but one small toe, which adheres only to the last phalanx; and this is of a symmetrical form, like the hoofs of the Pachydermata. Their swelled and cleft lip, their long neck, prominent orbits, the weakness of their crupper, and the unsightly proportion of their legs and feet, give them, in some degree, an appearance of deformity; but, we may add, among the harmonious structures devised by nature, there is not one so beautifully adapted for the station and purposes for which it was created, than is the camel. As we shall, however, illustrate this subject in another place, we merely cite the words of Major Smith, as opposed to the insinuation of a French writer, that the peculiarities above al-

luded to make the camels, in some degree, deformed beings. These apparent disproportions are, however, in reality, only manifestations of that Great Will which has adapted everything, with wonderful precision, to its destined end; for, in the hands of nature, true disproportion is nowhere to be found.—*Swainson, Natural History and Classification of Quadrupeds*, § 200.

Camel-backed. adj. Having a back like a camel; hunchbacked.

Not that he was crook-shoulder'd, or camel-backed.—*Fuller, History of the Holy War*, p. 215.

Camel-driver. s. One who drives camels.

So numerous were they in Upper Egypt, that in the time of Strabo half the population of the city of Coptos were Arabs; they were the camel-drivers and carriers for the Theban merchants in the trade across the desert.—*Sharpe, History of Egypt*, ch. xi.

Camellia. s. [named in honour of George Joseph Kamel (or Camellus), the botanist.] Flowering shrub so called.

Having a more equable temperature than almost any part of the western shores of Europe, but not a larger rain-fall, there is every facility of cultivating whole classes of plants, elsewhere difficult to keep alive; and, though there is little intense heat in summer, still the absence of cold in winter is sufficiently marked to admit of the orange-tree bearing fruit, while the *camellia* is loaded with flowers in sheltered gardens, from December to March.—*Ansted, The Channel Islands*, p. 10.

Camelopard. s. [Lat. *camelopardalis*; Gr. *καμηλοπάρδαλις*; the elements being *camelus* = camel, and *pardus* = panther, leopard, or tiger; the analysis into camel + leopard, with the corresponding pronunciation *cam-el-leopard*, being noticed only to be condemned.] Translation of the generic name *Camelopardalis*; the animal to which it applies specifically being more commonly called the Giraffe.

Camelopardalis... a genus... established... for the reception of that curious animal the giraffe or *camelopard*. The description Gellius affords us of the giraffe is still more satisfactory. This writer saw three *camelopards* at Cairo which he thus describes, &c.—*Rees, Cyclopadia, Camelopardalis*.

The *camelopard* was seen by Denham and Clapperton in parties of five or six, on the shores of Lake Tchad, and also met with and described by Rüppell in his travels in North Africa; while those of the South are frequently mentioned in the travels of Le Vaillant and Burchell.—*Naturalists' Library, Ruminating Animals*.

Cámeo. s. [Fr. *camaieu*; Italian, *cammeo*.]—in the first extract both forms are found within a few lines.] Small and delicate carving in relief (as opposed to the *intaglio*, which is sunk) on stone or shell.

As a more immediate introduction to the present subject, we will call the attention of our readers to the two forms of engraving entitled *camaieu* and *intaglio*. We refer our readers to Winkelman's interesting account of the celebrated *camaeus* which are handed down to us, particularly the exquisite one of Perseus and Andromeda.—*Foreign Quarterly Review*, no. 1.

The apparent conversion of a *camaeo*, or bas-relief, such as that of a piece of money, into an *intaglio*, and of an *intaglio* into a *camaeo*, when viewed with a single eye, especially through a microscope, is a well-known instance of this indetermination of judgement, and is an illustration of the aid we derive in estimating the form of solid objects from a different projection of them being presented to the two eyes.—*Dr. Baly, Translation of Müller's Physiology*, p. 1207.

Isabella of Este was distinguished by her elegant accomplishments and refined taste, which led her to collect antique statues, *camaeos*, medallions, and other specimens of art.—*Roscoe, Life and Pontificate of Leo X.* i. 157. (Ord MS.)

With the accent on the second syllable.

Each nicker mould a softer feature drinks. The bold *camaeo* speaks, the soft *intaglio* thinks.

Darwin, Botanic Garden.

Cámara. s. [Lat. = chamber.] Chamber or compartment for exhibiting, by means of reflection, the image of anything external to its opening.

The *camera lucida* (=lucid, or clear chamber) is a contrivance of Dr. Hook for making the image of anything appear on a wall in a light room either by day or by night.—*Rees, Cyclopadia*, in voce.

Dr. Wollaston's camera reduces external objects, by means of a prism, to a size which renders them capable of being traced.

In the *camera obscura* (=obscure or

darkened chamber) the light comes only through a double convex glass; and objects exposed to daylight, and opposite to the glass, are represented inverted upon any white surface placed in the focus of the glass.

The first invention of the *camera obscura* has been attributed to Baptista Porta.—*Rees, Cyclopadia*, in voce.

He there saw the moral scenes of life passing in review before his mind, as exactly as the beautiful objects on his river Thames from his *camera obscura*.—*Tyler, Historical Rhapsody on Pope*, p. 16. That the objects of sight are all painted in the bottom of the eye, upon a membrane called the retina, pretty much in the same manner as the like objects are painted in a *camera obscura*, is well known to whoever has the slightest tincture of the science of optics.—*A. Smith, On the External Senses*.

Cámerade. s. Same as Comrade.

Camérades with him, and confederates in his design.—*Rymer*.

Cámerated. adj. [Lat. *camera* = chamber.] In Zoology. Divided into chambers, as certain shells: (in the following extract we find both the Latin and the corresponding English term).

A more complicated fossil shell than any of the preceding, but allied to them by the *camerated* and siphoniferous structure of one of its constituent parts, once occasioned much perplexity amongst paleontologists. The shell to which I allude is that called the *Belemnite*, which is associated with the more obvious congeners of the Nautilus through a considerable range of the secondary rocks. It makes its first appearance, with *Tendopsis* and *Celeno*, in the Lias, as the precursors of the calamaries and cuttles. The chambered part of the shell of this extinct Cephalopod has the form of a straight cone, the septa being numerous, with a slight and equable concavity directed towards the outlet or base of the cone. The intervening chambers are so shallow that the septa have been compared to a pile of watch-glasses. This chambered part, with its sheath, is lodged in a conical cavity.—*Owen, Lectures on Comparative Anatomy*, lect. xxiii.

Cámis. s. [Italian, *camise*; Fr. *chemise*; Lat. *camisia*; Romaic, *καμίσιον*.] Kind of shirt or smock; tunic. Scarcely English. All in a *camis* light of purple silks.

Spenser, Faerie Queene, v. 5. 2.

Oh, who is more brave than the dark Sultie, With his snowy *camise* and his shaggy capote?

Byron, Child Harold, li. 72, song.

Camisado. s. [Spanish.] Attack made by soldiers in the dark, on which occasion they put their shirts outside, to distinguish each other by; also, the dress itself.

They had appointed the same night, whose darkness would have increased the fear, to have given a *camisado* upon the English.—*Sir J. Hayward*.

Their armours and *camisados*: I mean the shirts that covered their armours.—*Sir R. Williams, Actions of the Low Countries*, p. 83, 1618.

After midnight, we dislodged from our quarters some two thousand of our best men, all in *camisados* with scaling ladders.—*Ibid.* p. 82.

The towne and cloyster, having intelligence, sallied out from both quarters some eight hundred footmen, with all their horsemen, to give a *camisado* under the conduct of Monsieur de Roveres.—*Ibid.* p. 41.

Cámilet. s. [Fr. *camelot*; Italian, *camelotto*.]

Kind of stuff originally made of a mixture of silk and camel's hair; now made with wool and silk.

He had on him a gown with wide sleeves, of a kind of water *camilet*, of an excellent azure colour.—*Bacon*.

This habit was not of camel's skin, nor any coarse texture of its hair, but rather some finer weave of *camelot*, *gorram*, or the like; in as much as these stuffs are supposed to be made of the hair of that animal.—*Sir T. Broune, Vulgar Errors*.

Meanwhile the pastor shears their hoary beards, And eases of their hair, the laden herds: Their *camelots* warm in tents the soldier hold, And shield the shiv'ring mariner from cold.

Dryden.

The best *camilets* are made at Brussels.—*Lord Chesterfield*.

Cámmock. s. [A.S. *cammuoc*.] Name said in botanical works to be applied to the *Ononis arvensis* or Rest-harrow; a plant by no means remarkable for its crookedness; its name being taken from the toughness and depth of its roots by which the harrow is ar-rested.

Camcock, like Cambrel, has been derived from Cam; and in the extracts from *Lyly crookedness* is a conspicuous element in the import of the word. The last extract, however, shows that neither the origin nor the meaning is beyond doubt.

But timely, madam, crooks that tree that will be a camcock, and young it pricks that will be a thorn.—*Lyly, Endymion*.

Camocks must be bowed with sleight, not strength.—*Id., Sappho and Phaoon*.

Batman on Bartholomew spells it *cambock* and *cambemok*, but from his description seems to mean the furze. . . . In Apuleius *cammo* is translated *Peucedanum*, from which we may conclude that it did not originally mean a woody and thorny shrub; but rather, like *kambuck* in Suffolk at the present day, and *Pex*, or some such plant as the Shepherd's Comb, which it seems to do in a passage of Piers Plowman's Vision:

For communlike in contrees,

Cammoke and wedes,

Forden the fruit in the field;

Then the grownen togideres.

Dr. Prior, *Popular Names of British Plants*.

Camomile. s. Same as Chamomile.

The scent-full camomile, the verdurous earth.

Drayton, *Polyolbion*, xv.

This species (*Arvicola pratensis*) . . . was first discovered in England by Mr. Yarrell . . . and described by him . . . under the name of the Bank *Campagnol*.—*Naturalist's Library*; W. Can. v. n. [This word must be considered under several heads. 1. Its *form* and *place* as a *tense*.—*Can* is no Present tense in respect to its form, however much it may be one in respect to its import; but, on the contrary, a Perfect: and still less is it an Infinitive Mood, though in the previous editions it is preceded in its entry by the word *to*, i.e. *to Can*. This, indeed, is a form which it never takes in ordinary English, though catachrestic forms like *to can* = *to be able* = *posse* are probably to be found. It is a Perfect of the same class as *swam* and *swum*; its Anglo-Saxon singular being what it is in English for the First and Third persons, its Second singular *cunne*, and all its persons in the plural *cunnon*; as *ic can*, *þu cunne*, *he can*, *we, ye, hi, cunnon*: exactly the conjugation of *swam*, *sung*, and numerous other verbs. The Present from which such a series would be formed is *cen* or *cin*; or, as it would be spelt in all the allied languages, *ken* or *kin*.

2. Its *meaning*.—When we have known, have learned, have understood, how to do a thing, we *can* do it; and the sense is Present: our present ability being the result of our previously acquired knowledge, and treated as such. The same is the case with *memini* = *I have called to mind* = *I remember*, in Latin; with *oïda* = *I have known* or seen (compare the Latin *vidi*), in Greek; and with *shall* (q.v.), in English. This use of it in the sense of *know* is frequent in old English; and at the present time the provincial expression, 'I will do all I *know*' = 'I will do all I *can*,' is common.

3. Its *age*.—Like several other verbs in English which are in this or in similar respects abnormal (see *Dare*, *May*, *Owe*), it is one of the oldest words in the language, being fundamentally the same as the root of the Greek *γν-ω*, and the Latin *gn-osco* (*nosco*).

4. The fact of its *power being Present*, whilst its *form* is *Perfect*, is old. In the Anglo-Saxon it was so far treated as a Present, as to have a Preterite derived from it. This was *cude*. The German and Danish Preterites are *könnte*.

5. That the *l* in the ordinary Preterite *could* is entirely out of place is evident; indeed its presence in our spelling supplies us with one of the best instances of what is called Catachresis; concerning which more is said in the Preface. The only excuse, a preeminently insufficient one, is that (except in a few instances where the speaker, being misled by a little learning, fancies that in sounding it he is following the so called orthography of the written language) it does not belong to spoken, or real, language at all; but is merely a piece of bad spelling. The Scotch omit it (writing *coud*), and so did our oldest writers. The origin, however, is clear. The false analogies of *would* and *should*, from *will* and *shall*, where the *l* has really its place in the root, have misled us.

6. *Relation to Ken*.—As the *l* in *could* suggests a relationship to *should* and *would* which has no existence, so does the initial *c* conceal a relationship which is real. That the real Infinitive and Present of *can* are to be found in the North-Country word *ken* has, probably, been anticipated; yet, in practice, they are two different words, almost as different as *can* and *know*. The oldest spelling, however, of even *ken*, is that with the *c*; inasmuch as, unlike the allied languages, the Anglo-Saxon followed the Latin in eschewing the use of the *k*: but, when an *e*, an *i*, or a *y* followed a *c*, the risk of that letter being pronounced as *s* made a resort to *k* convenient. Still, *can* and *ken* are the only words in English of which the character is thus disguised. Upon the whole, *could* may safely be branded as the worst spelt word in our language.

7. The construction of *Can* is generally Infinitive, rather than Gerundial; i.e. the verb which follows it is not preceded by *to*. We say 'I can speak,' but not 'I can to speak.'

1. Know; understand. *Obsolete*.

Seemeth thy flocke thy counsell can.

And can you these tongues perfectly?—*Beaumont and Fletcher, The Coxcomb.*

2. Be powerful; influential: (in the first extract the construction is *gerundial*). *Obsolete*.

Candy. *s.* [from Turkish, *kandi* = sugar.] See Sugar-candy.

Candy. *s.* In Botany, this word, whether we treat it as a separate noun, or as an element in a compound, means *Candia*, i.e. appertaining to the island of *Candia* or *Crete*. The white and purple *Candytufts* are the flowers to which, at present, it is chiefly applied. In Gerarde, however, besides the plant named in the extract, the modern *Candytuft* or *Iberis*, we find a *Smyrnum Creticum*, or *Candy Alexanders*, and a *Daucus Cretensis verus*, or *Candy Carrots*.

This plant is called by Dodonæus, but not rightly, *Arabis* and *Draba*; as also *Thlaspi Candie*; which last name is retained by most writers; in English *Candy Thlaspi* or *Candy Mustard*.—*Gerarde, Herball*, p. 285; ed. 1633.

Cane. *s.* [?] See extracts.

Some intelligent country people have a notion

that we have in these parts a species of the genus *Mus-telinum*, besides the weasel, stoat, ferret, and polecat, a little reddish beast not much bigger than a field mouse, but much longer, which they call a *cane*. This piece of intelligence can be little depended on; but farther inquiry may be made.—*White, Natural History of Selbourne*, let. 15.

The animal here spoken of by White under the name of *cane* is probably only the female of the common weasel, which is constantly much larger than the male.—*Leonard Jenyns*, note.

The more perfect quadrupeds have three sorts of teeth, termed incisors, canines, and molars. . . . The canines follow the incisors, and occupy an intermediate station between them and the molars; they are only employed in tearing or holding; hence they are chiefly confined to quadrupeds who live upon animal matter, and are wanting in the herbivorous ruminants, to whom, in fact, they are unnecessary.—*Swainson, Natural History of Quadrupeds*, § 71.

Should seek a plaister by a contempt revolt,

In *Botany* and *Horticulture* its meaning is indefinite, applying, or being supposed to apply, to several plants, some of which have no other *cankorous* quality than that of being disagreeable or prejudicial. As the popular name of a fungus growing on and injuring trees, it is probably the most appropriate.The calf, the wind-shock, and the knot,
The canker, scab, scurf, sap, and rot. *Evelyn.*In the following, the interpretation of the previous editions, 'kind of wild worthless rose, dogrose,' is apparently true of the quotations by which it is followed. In *Gerarde*, however, the *canker-rose* is the red poppy; whilst *cankerwort* is given as a synonym of two words, *Dandelion* and *Fluellin*; the latter itself a term of doubtful meaning.To put down Richard, that sweet lovely rose,

the English collieries, especially at Wigan in Lan-
cashire.—*Brande, Dictionary of Science, Literature,
and Art.**Cannell* is the corruption of the word *candle*,
which has been applied to a particular description
of coal, either because in burning it gives out a
bright flame like that of a candle, or because in some

His books are almost the very *canon* to judge both doctrine and discipline by.—*Ibid.* preface.

Religious *canons*, civil laws are cruel,

Then what should war be?

Shakespear, Timon of Athens, iv. 3.

Canons in logic are such as these: every part of a division, singly taken, must contain less than the whole; and a definition must be peculiar and proper to the thing defined.—*Watts*.

2. Laws made by ecclesiastical councils: (construction often *adjectival*, especially in connection with *law*, where it contrasts with Common and Civil).

Canon law is that law, which is made and ordained in a general council or provincial council of the church.—*Ayliffe, Parergon Juris Canonici*.

These were looked on as laws persons, and great severities of penance were prescribed them, by the *canons* of Ancyra.—*Bishop Stillingfleet*.

3. Books of Holy Scripture received by the Church as the rule of faith.

Canon also denotes those books of Scripture, which are received as inspired and canonical, to distinguish them from either profane, apocryphal, or disputed books. Thus we say, that Genesis is part of the sacred *canon* of the Scripture.—*Ayliffe, Parergon Juris Canonici*.

4. Dignitary in cathedral churches.

For deans and *canons*, or prebends of cathedral churches, they were of great use in the church; they were to be of counsel with the bishop for his revenue, and for his government in causes ecclesiastical.—*Bacon*.

Swift much admires the place and air, And longs to be a *canon* there. A *canon*! that's a place too mean: No, doctor, you shall be a dean. Two dozen *canons* round your stall, And you the tyrant o'er them all. *Swift*.

Canon. s. [Though often spelt with *nn*, the origin of this word is probably the Spanish *cañon*=tube or pipe. Hence, it may denote that which fits and encases anything, as a *boot*. In this sense, with the Spanish pronunciation, we find it in the following extract, where it is explained *boot-hose*:

Come, you are so modest now, 'tis pity that thou wast ever bred to be thus through a pair of *canons*.—*Middleton, More Dissemblers besides Women*. (Nares by H. and W.)

This shows us how that part of a horse's foreleg which appears to correspond most closely with the shin, or that part which, in man is covered with a *boot*, is called the *canon-bone*. Compare *stifle-bone* with the German *stiefel*=*boot*.]

In *Farriery* and in *Comparative Anatomy*. Bone in the foreleg of a horse, between the knee and pastern.

The shank or *canon* answers to the metacarpus in man.—*Rees, Cyclopædia, Horse*.

Used *adjectively* with *bone*, or as the *first element* in a compound.

The bones of the foreleg of the horse become firmer as we trace them downwards. The two bones corresponding with those of the forearm, are braced together and consolidated; and the motion at the elbow joint is limited to flexion and extension. The carpus, forming what by a sort of licence is called the knee, is also newly modelled; but the metacarpal bones and phalanges are totally changed, and can hardly be recognized. When we look in front, instead of the four metacarpal bones, we see one strong bone, the *canon-bone*, and, posterior to this, we find two lesser bones, called splint bones.—*Sir C. Bell, Bridgewater Treatise, The Hand*.

Canon-bit. s. [like the preceding, Spanish.] Part of the bit let into the horse's mouth.

A goodly person, and could manage fair, His stubborn steed with curbed *canon bit*, Who under him did trample as the air. *Spenser, Faerie Queen*.

has sometimes set up an illiterate heavy writer, for a most judicious and formidable critic.—*Addison, Spectator*, no. 291.

2. Whining pretension to goodness, in formal and affected terms.

Of promise prodigal, while power you want,
And preaching in the self-denying cant.

Dryden, Aurengzebe.
He who should be present at all their long cant, would show a greater ability in watching, than ever they could pretend to in praying, if he could forbear sleeping, having so strong a provocation to it, and so far an excuse for it.—*South, Sermons*, ii. 160.

If we would trace out the original of that flagrant and avowed impiety which has prevailed among us for some years, we should find that it owes its rise to that cant and hypocrisy which had taken possession of the people's minds in the times of the great rebellion.—*Addison, Freeholder*, no. 37.

That he was a good man he evinced by proofs more satisfactory than deep groans or long sermons, by humility and suavity when he was at the height of human greatness, and by cheerful resignation under cruel wrongs and misfortunes: but the cant then common in every guardroom gave him a disgust which he had not always the prudence to conceal.—*Macaulay, History of England*, ch. i.

3. Barbarous jargon.

The affectation of some late authors, to introduce and multiply cant words, is the most ruinous corruption in any language.—*Swift*.

4. Auction.

Numbers of these tenants, or their descendants, are now offering to sell their leases by cant, even those which were for lives.—*Swift*.

[Cant is properly the language spoken by thieves and beggars among themselves, when they do not wish to be understood by bystanders. It therefore cannot be derived from the sing-song or whining tone in which they demand alms. The real origin is the Gaelic *cainnt*, speech, language, applied in the first instance to the special language of rogues and beggars, and subsequently to the peculiar terms used by any other profession or community.

The Doctor here,
When he discoursed of dissection,
Of vena cava and of vena porta,
The mesenterium and the mesentericum,
What does he else but cant? Or if he run
To his judicial astrology,
And trowl the trine, the quartile and the sextile,
Does he not cant? Who here can understand
him?

(*B. Jonson*).
Gaelic *can*, to sing, say, name, call.—*Wedgwood, Dictionary of English Etymology*.

Probably the Gaelic word itself comes from the Latin *cantus* = song.

Cant. v. n. Talk in the jargon of particular professions, or in any kind of formal affected language, or with a peculiar and studied tone of voice.

Men cant about materia and forma; hunt chimeras by rules of art, or dress up ignorance in words of bulk or sound, which may stop up the mouth of enquiry.—*Glanville, Scepis Scientifica*.

1. Sell by auction.

Is it not the general method of landlords to wait the expiration of a lease, and then cant their land to the highest bidder?—*Swift, Against the Power of Bishops*.

2. Bid a price at an auction.

When two monks were outwitting each other in canting the price of an abbey, he [William Rufus] observed a third at some distance, who said never a word: the king demanded why he would not offer; the monk said, he was poor; and besides, would give nothing if he were ever so rich: the king replied, then you are the fittest person to have it, and immediately gave it him.—*Swift, History of England, Reign of William II.*

Cantankerous. adj. Cross-grained; ill-conditioned in temper. *Colloquial*.

Cantankerousness. s. [?] Crossness; petulance; ill-temper.

By all means tell the truth, we reply, but we refuse to believe that the truth is to be found in cantankerousness. History is the very last species of composition into which such a spirit can be admitted. We ask Mr. —'s pardon if we offend his taste by the use of such a homely word as 'cantankerousness'; he would abominate the word, but the thing itself is his delight.—*Times*, Aug. 14, 1863.

Canteén. s. [Fr. *cantine*.] In *Military* language.

As dull divines, and holy canters do;
She acts what they only in pulpits prate,
And theory to practice does translate.

'Lives there one man for whom prayer is unavailing?'—Out, canter, out! My pretty Jane! And she laid her head on my bosom, and looked up in my face, and so died!—*Sir E. L. Bulwer, Eugene Aram*, ch. ii.

Cánter. s. In *Horsemanship*. See extract.

[Cánter.—A slow gallop, formerly called a *Canterbury* gallop. If the word had been from *cantherius*, a gelding, it would have been found in the continental languages, which is not the case.—*Wedgwood, Dictionary of English Etymology*.]

The *cánter* is to the gallop very much what the walk is to the trot, though probably a more artificial pace. The exertion is much less, the spring less distant, and the feet come to the ground in more regular succession: it is a pace of ease, quite inconsistent with any exertion of draught.—*Yonatt, The Horse, On Draught*, p. 547.

Canterbury-bells. s. Name applied in the first extract to the Campanula Trachelium or Throatwort, in the second to the Cardamine pratensis or Lady's Smock; to the latter locally and without any manifest propriety. The garden-plant of the present time so named is a Campanula, allied to, but not specifically identical with, the Throatwort.

Throatwort is called in Latin *Cervicaria*, and *Cervicaria* major; in Dutch, *Halserkrut*; in English, *Canterbury Bells*, *Haskeworte*, *Throtewoorte*, or *Houlawoort*, of the virtue it hath against the pain and swelling thereof.—*Gerard, Herbal*, p. 453: ed. 1633.

They are commonly called in Latin, *Flos Cuculi*; in English *Cuckow* flowers; in Norfolk *Canterbury Bells*; at the Nampwich in Cheshire, where I had my beginning, *Ladies' Smocks*, which hath given me cause to christen it after my country fashion.—*Ibid.* p. 281.

Cántering. verbal abs. In *Horsemanship*. Practice of the *cánter*.

For the rest, he loved trotting better than *cántering*—piqued himself upon being manly—wore do-skin gloves—drank port wine, par préférence, and considered beef-steaks and oyster-sauce as the most delicate dish in the bill of fare.—*Sir E. L. Bulwer, Pelham*, ch. xlii.

Canthárides. s. [plural of Gr. *καὶ θάρις*, *-ίδος*, diminutive of *καὶ θάρος* = beetle or chafer.] Spanish flies (*Meloe vesicatoria*) used to raise blisters.

The flies, *cantharides*, are bred of a worm, or caterpillar, but peculiar to certain fruit trees; as are the fig tree, the pine tree, and the wild briar; all which bear sweet fruit, and fruit that hath a kind of secret biting or sharpness; for the fig hath a milk in it that is sweet and corrosive; the pine apple hath a kernel that is strong and abstersive.—*Bacon, Natural and Experimental History*.

This right of estate, in some nations, is yet more significantly expressed by Moses in his *cánticles*; in the person of God to the Jews.—*Bacon, Advertisement touching a Holy War*.

The eighth chapter of Proverbs ceased to bear a Christian meaning, because, as Theodore maintained, the writer of the book had received the gift, not of prophecy, but of wisdom. The *Cánticles* must be interpreted literally; and then it was but an easy, or rather a necessary step, to exclude the book from the canon.—*Newman, Development of Christian Doctrine*, ch. v.

2. Division of a poem; canto. Rare.

The end whereof, and dangerous event,
Shall for another *cánticle* be spared.

'The busy, subtle serpents of the law,
Did first my mind from true obedience draw;
While I did limits to the king prescribe,
And took for oracles that *cánting* tribe.

Dryden, Juvenal's Satires.

Cánting. verbal abs. Act or habit of one who cants.

It has been held by some, that the art of *cánting* is ever in greatest perfection, when managed by ignorance; which is thought to be enigmatically meant by Plutarch, when he tells us, that the best musical instruments were made from the bones of an ass. (Ord MS.)

For thine to stand, to make the twelfth out.

I thought, at setting-off, about two dozen
Cántos would do; but at Apollo's pleading,

Eternal Wisdom,—having hovered awhile over all
the capacities of this fluid possibility,—forthwith
settled upon what was most perfect and exact.—

its site occupied by a knight's hall; the old terrace
should be restored; the donjon keep should be raised,
and a gallery, three hundred feet long, thrown

warrant you were frightened, wa'n't you, last night,
when it blew but a *cap-full* of wind?'—A *cap-full*
do you call it?' said I; 'it was a terrible storm.'—
'A storm, you fool you,' replied he, 'do you call that
a storm? why it was nothing at all; give us but a

such a squall of wind as that; but you're but a fresh-
water sailor, Bob.'—*De Foe, Life and Adventures of
Robinson Crusoe*.

That *kuara*, however, is the root of the word under notice, as well as of Carob, is probable.

The spelling with *c* (see Caract) was probably encouraged, if not originally produced, by some confusion of the notion of *quality* as expressed by the weight of a diamond, and as expressed by the Greek *χαρακτήρ*, or character.] See extract.

The weight and value of diamonds is reckoned by *carats* of four grains each; and the comparative value of two diamonds of equal quality, but different weights, is as the squares of these weights respectively.... The term *carat* is said to be derived from the name of a bean, the produce of a species of *Erythrina*, a native of the district of the Shangallas, in Africa, a famous mart for gold dust. The tree is called *kuara*, a word signifying 'sun' in the language of the country; because it bears flowers and fruit of a flame colour. As the dry seeds of the fruit are nearly always of uniform weight, the savages have used them from time immemorial to weigh gold. The beans were transported into India at an ancient period, and have long been employed there for weighing diamonds. The *carat* of the civilized world is an imaginary weight, consisting of four nominal grains, a little lighter than four grains troy.—*Ure, Dictionary of Arts, Manufactures, and Mines, Diamond*.

1. Small sort of firearm.

He might have strengthened his surmise by a reference to the English *caliver*, which is an obvious modification of the same word.—*Wedgwood, Dictionary of English Etymology*.]

The plant of whose root the Indian bread *casava* is made is a low herbe; &c.—*Gerarde, Herball*, p. 1543; ed. 1633.

The tuberous root consists principally of starch and a white milky poisonous juice. It is rasped and pressed to separate the juice, which deposits a fecula. The compressed pulp is dried in chimneys, exposed to the smoke, and afterwards powdered. In this state it constitutes *casava* powder. When dried or baked into cakes on plates of iron or clay, it constitutes *casava*, or *cassada*, bread.—*Pereira, Materia Medica*.

The *casava* cakes sent to Europe (which I have eaten with pleasure) are composed almost entirely of starch, along with a few fibres of ligneous matter. It may be purified by diffusion through warm water, passing the milky mixture through a linen cloth, evaporating the strained liquid over the fire, with constant agitation. The starch evolved by the heat, thickens as the water evaporates; but, on being stirred, it granulates, and must be finally dried in a proper stove. . . The product obtained by this treatment is known in commerce under the name of tapioca; and being starch, very nearly pure, is often prescribed by physicians as an aliment of easy digestion. A tolerably good imitation of it is made by heating, stirring, and drying potato starch in a similar way.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

In the following extract it is used either adjectively or as the first element in a compound, and means *casuistical*.

5. In Grammar. See extracts.

The several changes which the noun undergoes in the Latin and Greek tongues, in the several numbers, are called *cases*, and are designed to express the several views or relations under which the mind considers things with regard to one another; and the variation of the noun for this purpose is called declension.—*Clarke, Latin Grammar*.

Sometimes grammarians use this word [*case*] to signify (which is its strict sense) a certain variation in the writing and utterance of a noun, denoting the relation in which it stands to some other part of the sentence; sometimes to denote that relation itself: whether indicated by the termination, or by a preposition, or by its collocation. . . . Much confusion and frivolous debate has hence resulted. . . . Whoever would see a specimen of this, may find it in the *Port Royal Greek Grammar*; in which the authors insist on giving the Greek language an ablative *case*, with the same termination, however, as the dative: (though, by the way, they had better have fixed on the genitive; which oftener answers to the Latin ablative) urging, and with great truth, that if a distinct termination be necessary to constitute a *case*, many Latin nouns will be without an ablative, some without a genitive or without a dative, and all neuters without an accusative. And they add, that since it is possible, in every instance, to render into Greek the Latin ablative, consequently there must be an ablative in Greek. If they had known and recollected that in the language of Lapland, there are, as we are told, thirteen *cases*, they would have hesitated to use an argument which would prove that there must therefore be thirteen *cases* in Greek and Latin also! All this confusion might have been avoided, if it had but been observed that the word *case* is used in two senses.—*Whately, Logic*, Appendix, no. 1, *Ambiguous Terms, Case*.

In case. If it should happen; upon the supposition that.

For *in case* it be certain, hard it cannot be for them to shew us where we shall find it; that we may say these were the orders of the apostles.—*Hooker*.

This would be the accomplishment of their common felicity, *in case*, either by their evil destiny or advice, they suffered not the occasion to be lost.—*Sir J. Hayward*.

All a case. All be same: a matter of indifference.

I can but be a slave where ever I am; so that taken or not taken, 'tis all a case to me.—*Sir R. L'Estrange*.

Caseharden. v. a. Harden anything on the outside, especially iron by steeling the surface.

Fine keys, too, require to be *casehardened*.—*Rees, Cyclopædia, Steel*.

Casehardening. verbal abs. Hardening on the outside, generally iron by steeling the surface.

The manner of *casehardening* is thus: Take cow horn or hoof, dry it thoroughly in an oven, then beat it to powder; put about the same quantity of bay salt to it, and mingle them together with stale chamberlye, or else white wine vinegar. Lay some of this mixture upon loam, and cover your iron all over with it; then wrap the loam about all, and lay it upon the hearth of the forge to dry and harden. Put it into the fire, and blow up the coals to it, till the whole lump have just a blood-red heat.—*Moxon, Mech. Acad. Exercises*.

Casehardening is the name of the process by which iron tools, keys, &c., have their surface converted into steel when very hard is brittle, and iron alone, for many purposes, as fine keys, far too soft. It is, therefore, an important desideratum to combine the hardness of a steely surface with the toughness of an iron body. These requisites are united by the process of *case-hardening*.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Hence the designation from Spanish *casa*, house, and *matar*, to slay, corresponding to the German *mord-keller*, *mord-grube*, and the Old English *slaughter-house*. 'Casamatta, a cantory or slaughter-house, which is a place built low under the walls of a bulwark, not reaching to the height of the ditch, and serveth to annoy the enemy when he entereth the ditch to scale the wall.' (Florio.) 'Casemate, a loophole in a fortified wall.' (Cotgrave.) 'A vault of mason's work in the flank of a bastion next the curtain, to fire on the enemy.' (Bailey.) As defence from shells became more important, the term was subsequently applied to a bombproof vault in a fortress, for the security of the defenders, without reference to the annoyance of the enemy.—*Wedgwood, Dictionary of English Etymology*.]

Casement. s. [Italian, *casamento*.] Window opening upon hinges.

What arguments they have to beguile poor, simple, unstable souls with, I know not; but surely the practical, *casuistical*, that is, the principal, vital part of their religion savours very little of spirituality.—*South.*

There is a generation of men, who have framed their *casuistical* divinity to a perfect compliance with all the corrupt affections of a man's nature.—*South, Sermons, ii. 393.*

Casuistically, adv. In a casuistical manner. Themselves are necessitated by the tenour of their principles, *casuistically* to allow such private judgment and will, as is altogether inconsistent with civil sovereignty.—*Cudworth, 898. (Ord MS.)*

He [Jeremy Taylor] obtained in that house much of that learning wherewith he was enabled to write *casuistically*.—*Wood, Athenæ Oonienses, ii. 400. (Ord MS.)*

Casuisting, verbal abs. Playing the casuist. Rare.

Casuistry, s. Science of a casuist; doctrine of cases of conscience.

This concession would not pass for good *casuistry* in these ages.—*Pope, Homer's Odyssey, Notes.* Morality, by her false guardians drawn, Chicane in furs, and *casuistry* in lawn. *Id. Dunciad.* *Casuistry* is the jurisprudence of the theology; it is a digest of the moral and religious maxims to be observed by the priest, in advising or deciding upon questions which come before him in confession, and in assigning the amount of penance due to each sin. *Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion, ch. v.*

Cat, s. [?] Three-masted vessel of Norwegian build used in the coal trade.

There are vessels, at this day, which are common upon the northern part of the English coast, and are called *cats*. Part of the harbour at Plymouth is called *catwater*, undoubtedly from ships of this denomination, which were once common in those parts.—*Bryant, Observations on Rowley's Poems.*

Cat, s. [Lat. catus.] Animal of the genus *Felis*.

A *cat*, as she beholds the light, draws the ball of her eye small and long, being covered over with a green skin, and dilates it at pleasure.—*Peacham, Compleat Gentleman.*

Used metaphorically.

'Twas you incens'd the rabble:
Cats, that can judge as fitly of his worth,
As I can of those mysteries, which Heaven
Will not have earth to know.

Shakespeare, Coriolanus, iv. 2.

Cat, s. Colloquial for *Cat-o'-nine-tails*. **Not (or just) room to swing a cat.** Phrase applied to narrow berths, boxes, or apartments. (This connection, at least, the editor thinks preferable to the notion that *cat* here means the animal so called.)

Now mark the contrast at London. I am pent up in frowzy lodgings, where there is not room enough to swing a *cat*; and I breathe the steams of endless putrefaction.—*Smollett, Expedition of Humphry Clinker.*

Cat in pan. [probably no connection with *cat* as an English word at all; but the catachrestic transformation of some misunderstood foreign term.] The meaning of *turning the cat in the pan* does not seem to have been always the same; or, what is more probable, the exact import of the phrase was not always understood. (The construction is by no means unequivocal; since *turn* may be either active, and govern *cat*, or neuter, as in 'turn king's evidence'.)

1. Transfer of a charge of calumny.

A subtle *turning the cat in the pan*, or wresting of a false thing to some purpose.—*Huot, Dictionary.*

There is a cunning which we, in England, call the *turning of the cat in the pan*; which is, when that which a man says to another, he lays it as if another had said it to him.—*Bacon.*

2. Become a turncoat; shift about; veer round.

When George, at pudding-time, came o'er,
And moderate men look'd big, sirs;

CATA

I turned the *cat* in *pan* once more,
And straight became a Whig, sirs.

For this the rule I will maintain

Until my dying day, sirs.

That, whatsoever king shall reign,

I'll be the Vicar of Bray, sirs.

Sing.

Cat-eyed, adj. Having eyes like a cat.

If *cat-eyed*, then a Pallas is their love;

If freckled, she's a party-coloured dove.

Dryden, Translation from Lucretius.

Cat-o'-nine-tails, s. [see third extract.]

Whip with nine lashes, used in the army and navy.

You dread reformers of an impious age,

You awful *cat o' nine tails* to the stage.

Sir J. Vanbrugh, False Friend, Prologue.

I tell you one thing, if you should give such language at sea, you'd have a *cat-o'-nine-tails* laid cross your shoulders.—*Congreve, Love for Love.*

[*Cat o' nine tails.* Polish, *kat*, executioner; *katowác*, to lash, rack, torture. Lithuanic, *katas*, the stalk of plants, shaft of a lance, handle of an axe, &c.; *bot-kotis*, the handle of a scourge; *kotas*, the executioner; *katowáci*, to scourge, to torture. Russian, *koshka*, a cat; *koshki*, a whip with several pitched cords, *cat-o'-nine-tails*.—*Wedgwood, Dictionary of English Etymology.*]

Catabaptist, s. [Gr. *κατά* and *βαπτίζω*.]

One who is against, or who abuses, baptism.

Of these anabaptists or *catabaptists*, who differ no more than Bavius and Mevius, Alstedius maketh fourteen sorts.—*Featley, Dippers Dipt, p. 23.*

Catachresis, s. [Gr. *κατάχρησις*=abuse, of which it is the Greek translation.] Abuse in Grammar and Rhetoric. (For the special import given to this word by the editor, see preface.)

Their skill in astronomy dwindled into that, which, by a great *catachresis*, is called judicial astrology.—*Bishop Stillingfleet, Origines Sacre, i. 3.*

Catachrestic, adj. Abusive, in the rhetorical or grammatical sense of the word. See *Catachresis*.

Catachrestical, adj. Same as *Catachrestic*.

A *catachrestical* and far derived similitude it holds with men, that is, in a bifurcation.—*Sir T. Browne, Vulgar Errors.*

Catachrestically, adv. In a forced or exaggerated manner.

Where, in divers places of Holy Writ, the denunciation against groves is so express, it is frequently to be taken but *catachrestically*.—*Evelyn, iv. § 4.*

Cátaclysm, s. [Gr. *κατακλυσμός*.] Deluge; inundation.

The opinion that held these *cátaclysms* and empyroses universal was such as held that it put a total consummation unto things in this lower world.—*Sir M. Hale, Origination of Mankind.*

In *Geology* it has taken a technical meaning, signifying a sudden or violent rush of water, considered as the efficient cause by which certain phenomena have been produced, rather than by the gradual action of moderate currents, or by that of ice.

As such, it has as its adjectives *Cátaclysmal* and *Cátaclysmic*.

Cátacomb, s. [see last extract.]

On the side of Naples are the *cátacombs*, which must have been full of stench, if the dead bodies that lay in them were left to rot in open niches.—*Addison, Travels in Italy.*

[The *Dictionnaire Etymologique* says that the name is given in Italy to the tombs of the martyrs which people go to visit by way of devotion. This would tend to support Diez's explanation from Spanish, *cátar*, to look at, and *tomba*, a tomb (as the word is also spelt *cátatomba* and *cátatumba*), or *comba*, a vault, which however is not satisfactory, as a *shew* is not the primary point of view in which the tombs of the martyrs were likely to have been considered in early times. Moreover the name was apparently confined to certain old quarries used as burial places near Rome. Others explain it from *kara*, down, and *κῆφος*, a cavity.—*Wedgwood, Dictionary of English Etymology.*]

Cátadupe, s. [Gr. *κατάδωπος*=cataract of the Nile; from *κατά*=down, *δωπίω*=make a loud sound in falling.] Cataract; waterfall: (applied by way of eminence to those of the Nile, and also to the inhabitants near them). Rare.

Our ears are so well acquainted with the sound,

A stanza of six verses, of which the first, second, fourth, and fifth, were all in the octosyllable metre, and the third and last *cataléctick*; that is, wanting a syllable, or even two.—*Tyrwhitt, On Chaucer's Versification.*

Catalépsis, s. [Gr. *κατάληψις*.] See *Catalépsy*.

There is a disease called a *catalépsis* wherein the patient is suddenly seized without sense or motion, and remains in the same posture in which the disease seizeth him.—*Arbuthnot.*

Cátalepsy, s. Trance; ecstasy; loss of consciousness without either spasm or relaxation of the muscles, which remain in the condition in which they were when the fit came on, or in that which any second person may determine.

Cátalepsy and *Ecstasy*, although treated of by some writers as distinct affections, generally present very nearly the same pathological conditions. . . . This disease is very rare; so much so, that its existence has been doubted by many writers, who consider it to have been feigned. Its occasional occurrence, however, is well ascertained. I have seen one case of it in my own practice, and have been consulted by letter respecting a second.—*Copland, Dictionary of Practical Medicine.*

Cataléptic, adj. With a tendency to, or appertaining to, *cátalepsy*.

It was at this point in their history that Silas's *cataléptic* fit occurred during the prayer meeting.—*Silas Marner, ch. i.*

Cátalogue, s. [Gr. *κατάλογος*.] Enumeration of particulars; list; register of things one by one.

In the *catalogue* ye go for men;
Shoughs, water-rugs, and demi-wolves, are cloyed
All by the name of dogs.

The Jacobins of France, by their studied, deliberated, *catalogued* files of murders with the poignant, the sabre, and the tribunal, have shocked whatever remained of human sensibility in our breasts.—*Burke, Thoughts on a Regicide Peace.*

It is in point to notice also the structure and style of Scripture, a structure so unsystematic and various, and a style so figurative and indirect, that no one would presume at first sight to say what is in it and what is not. It cannot, as it were, be mapped, or its contents *catalogued*.—*Newman, Development of Christian Doctrine.*

Cátalysis, s. [Gr. *κατάλυσις*.]

1. Dissolution. Rare.

While they were in thoughts of heart concerning it, the sad *cátalysis* did come, and swept away eleven hundred thousand of the nation.—*Jeremy Taylor.*

2. In *Chemistry*. Action of one body on another by contact, rather than that which is accompanied by change on both sides.

(For example see extract under *Catalytic*.)

Catalytic, adj. See *Catalysis*.

An interesting class of decompositions has of late attracted considerable attention, which, as they cannot be accounted for on the ordinary laws of chemical affinity, have been referred by Berzelius to a new power, or rather new form of the force of chemical affinity, which he has distinguished as the *catalytic* force and the effect of its action as *catalytic*.

sis. . . A body in which this power resides resolves others into new compounds, merely by its contact with them, or by an action of presence, as it has been termed, without gaining or losing anything itself. Thus an acid converts a solution of starch (at a certain temperature) first into rum and then into sugar of grapes, although no combination takes place between the elements of the acid and those of the starch, the acid being found free and undiminished in quantity after effecting the change. — *Graham, Elements of Chemistry*, p. 196.

Cátamarán. *s.* [?] See extract.

The *catamarans* used in the Brazils, and which are also common in the East Indies, consist of three logs of wood tapered at one end and lashed together. They are furnished with paddles, and are said to pull as fast as boats, the men being squatted in a kneeling position, and managing them with wonderful dexterity in passing the surf which beats on the shores. Those used in the Brazils also carry sail. — *Young, Nautical Dictionary*.

Cataménia. *s.* [Gr. *katá* = according to, *mén* = month.] Menstrual discharge; menstruation.

Cataménial. *adj.* Appertaining to the *cataménia*.

As to the period of puberty, and the first appearance of the *cataménial* flux, there is found to exist great uniformity throughout the habitable globe. . . . The only marked exception occurs in the case of the Hindoo females, with whom, on an average, the *cataménial* flux appears about two years earlier than it does among other nations. — *Dunn, On the Unity of the Human Species*.

Cátaphract. *s.* [Gr. *katáphraktos* = encased, fortified.]

No sooner he, with them of man and beast
Select for life, shall in the ark be lodg'd,
And shelter'd round; but all the *cataracts*
Of heav'n set open, on the earth shall pour
Rain day and night. — *Milton, Paradise Lost*, xi. 824.

Run down the lofty mountain's chancel'd sides,
And to the vale convey their foaming tides.

2. In Medicine. Opacity of the capsule of the lens of the eye.

And accordingly, a deaf-mute, before he has been taught a language, either the finger-language, or reading, cannot carry on a train of reasoning, any more than a brute. He differs indeed from a brute in possessing the mental capability of employing language; but he can no more make use of that capability till he is in possession of some system of arbitrary general-signs, than a person born blind from *cataract* can make use of his capacity of seeing, till the *cataract* is removed. — *Whately, Elements of Logic*, introd.

Catárrh. *s.* [Fr. *catarrhe*, from Gr. *katá* = down, *ráō* = flow; a translation of the Latin *defluo* = flow down, whence *Defluxion*.] Defluxion; cold in the head.

Catásterism. *s.* [Gr. *καταστερισμός*; from *ἀστήρ* = star.] See extract.

Ptolemy makes no mention of the star or the story, and his catalogue contains no bright star which is not found in the 'Catasterisms' of Eratosthenes. These *Catasterisms* were an enumeration of 475 of the principal stars according to the constellations in which they are and were published about sixty years before Hipparchus. — *Whewell, History of the Inductive Sciences*, b. i. ch. iv. § 1.

There are, in the paleontological sciences, two antagonist doctrines: *catastrophes* and uniformity. The doctrine of a uniform course of nature is tenable only when we extend the notion of uniformity so far that it shall include *catastrophes*. — *Whewell, Novum Organon renovatum*, p. 25.

Catástrophist. *s.* In Geology. See preceding entry.

The *catastrophist* constructs theories, the uniformitarian demolishes them. The former adduces evidence of an origin, the latter explains the evidence away. The *catastrophist's* dogmatism is undetermined by the uniformitarian's skeptical hypotheses. But when these hypotheses are asserted dogmatically, they cease to be consistent with the doctrine of uniformity. — *Whewell, Novum Organon renovatum*, p. 25.

Or call the winds through long arcades to roar,

Proud to catch cold at a Venetian door. — *Pope*.

The production of the consequent required that they should all exist immediately previous, though not that they should all begin to exist immediately previous. The statement of the cause is incomplete, unless in some shape or other we introduce all the conditions. A man takes mercury, goes out of doors, and catches cold. We say, perhaps, that the cause of his taking cold was exposure to the air. It is clear, however, that his having taken mercury may have been a necessary condition of his catching cold. — *J. S. Mill, System of Logic*, b. iii. ch. v. § 3.

In France, nay in the world.

Beaumont and Fletcher, *Honest Man's Fortune*.

Another monster,
Sullen of aspect, by the vulgar call'd

With force incredible and magic charms,
Erst have endu'd, if he his ample palm
Should haply on ill-fated shoulder lay
Of debtor.

J. Phillips, *Splendid Shilling*.
'As I conceive,' went on Paul Deth, still in measured accents, 'thou dost not wish to be conveyed hence by tipstaves and catchpols to be flung into the dungeons of the Tolzey, there to lie, with fifty pounds' weight of iron on thy legs, and surrounded by all the ribald stealers of men's gold and the bloodstained takers of men's lives, until the time shall come for thee to be arraigned before the arbiters of justice as a midnight housebreaker.'—Sala, *The Ship-Chandler*.

Catchwater. s. (also with *adjectival* construction.) Drain cut along the boundary between a high and a low district, to catch the water from the former, and to protect the latter against any rain but that which falls directly upon it. John de Lambaco wrote also a Consolation of Theology in fifteen books, 1366. It was very early printed, without name, date, signature, paging, or catchword.—Park, *Note on Warton's History of British Poetry*, ii. 255, sect. 20.

Cate. s. Singular of Cates. Rare.

Yet so ridiculous a height is this foolish custom grown, that even the Christmas-pye, which in its very nature is a kind of consecrated cate, and a badge of distinction, is often forbidden to the druid of the family.—Tatler, no. 255. (Ord MS.)

Catechetic. adj. After the manner of a catechism.

He introduced a taste for philosophy among the christians; and, though Athenagoras rather deserves that honour, he was called the founder of the catechetical school which gave birth to the series of learned christian writers that flourished in Alexandria for the next century.—Sharpe, *History of Egypt*, ch. xiv.

In Syria too the schools were private, a circumstance which would tend both to diversity in religious opinion, and incaution in the expression of it; but the sole catechetical school of Egypt was the organ of the church, and its bishop would banish Origen for speculations which developed and ripened with impunity in Syria.—Newman, *Development of Christian Doctrine*, v. 2.

Catechism. s. Form of instruction by means of questions and answers (generally concerning religion).

Ways of teaching there have been sundry always usual in God's church; for the first introduction of youth to the knowledge of God, the Jews, even till this day, have their catechisms.—Hooker.

He had no catechism but the creation, needed no

study but reflection, and read no book but the volume of the world.—South.

Catechist. s. One whose charge is to instruct by questions, or to question the uninstructed concerning religion.

None of years and knowledge was admitted, who had not been instructed by the catechist in this foundation, which the catechist received from the bishop.—Hammond, *On Fundamentals*.

To have been a learned man and a christian, and to have encouraged learning among the catechists in his schools, may seem deserving of no great praise.—Sharpe, *History of Egypt*, ch. xiv.

Catechistical. adj. Instructing by question and answer.

S. Cyril was the authour of those catechistical sermons or institutions which are mentioned by S. Jerome.—Bishop Cosin, *Scholastical History of the Canon of the holy Scripture*, § 58.

Κατηχέω is derived from *ἦχος*, and signifieth originally and properly catechizing, or such a kind of teaching wherein the principles of religion, or of any art or science, are often inculcated, and by sounding and resounding beat into the ears of children or novices; but yet it is taken in Holy Scripture in a larger sense, not only for catechizing of children, but instructing men of riper years in the doctrine of salvation.—Featley, *Dippers Dipt*, p. 38.

Had those three thousand souls been catechized by our modern casuists, we had seen a wide difference.—Dr. H. More, *Decay of Christian Piety*.

And catechiz'd in every street. Swift.

'Your ordschip believes in the Trinity.' 'Who told you so?' said Middleton. 'Not believe in the Trinity!' cried the priest in amazement. 'Nay,' said Middleton: 'save your religion to be true if you can; but do not catechize me about mine.'—Macaulay, *History of England*, ch. xx.

It occurs in flat rough cakes, and under two forms. The first, or Bombay, is of uniform texture, and of specific gravity 1.39. The second is more friable and less solid. It has a chocolate colour, and is marked inside with red streaks. Areca nuts are also found to contain catechu.—Ure, *Dictionary of Arts, Manufactures, and Mines*.

Catechumen. s. [Gr. *κατηχούμενος* = one under catechetical instruction.]

Catégorém. s. [Gr. *κατηγορημα*.] Categorematic word. See extract.

Similarly, names are called *catégorématic* words, or *catégoréms*, because they can be predicated independently of any other word. Some logicians would exclude adjective names from the class of *catégoréms*, and reduce the latter to substantive names only. . . . As a proof of this, they say that an adjective cannot stand as subject of a proposition unless accompanied by the definite article, and in the plural number.—*Shedden, Elements of Logic*, ch. ii.

Catégorématic. adj. Conveying a whole term, i. e. either the subject or predicate of a proposition, in a single word.

It is evident that a term may consist either of one word or of several; and that it is not every word that is *catégorématic*, i. e. capable of being employed by itself as a term. Adverbs, prepositions, &c., and also nouns in any other case besides the nominative, are *catégorématic*, i. e. can only form part of a term. A *catégorématic* noun may be by itself a term. A verb (all except the substantive-verb used as the copula) is a mixed word, being resolved into the Copula and Predicate, to which it is equivalent; and, indeed, is often so resolved in the mere rendering out of one language into another; as 'ipse adest,' 'he is present.'—*Whately, Elements of Logic*, b. ii. ch. i. § 3.

Catégorématic. adj. Same as Catégorématic.

Can there possibly be two *catégorématic*, that is, positive substantial infinites? or can it be that a finite should, remaining finite, yet not be finite, but indefinite and innumerable places at once?—*Jeremy Taylor, Real Presence*, sec. 11, § 14. (Ord MS.)

Catégorématically. adv. In a *catégorématic* manner.

Catégorical. adj. Absolute; adequate; positive; equal to the thing to be expressed.

The king's commissioners desired to know whether the parliament's commissioners did believe that bishops were unlawful? They could never obtain a *catégorical* answer.—*Lord Clarendon*.

A single proposition, which is also *catégorical*, may be divided again into simple and complex.—*Watts, Logic*.

Propositions considered merely as sentences, are distinguished into *catégorical* and hypothetical. The *catégorical* as *simple*, simply that the predicate does, or does not, apply to the subject: as 'The world had an intelligent maker.' 'Man is not capable of raising himself, unassisted, from the savage to the civilized state.' The hypothetical . . . makes its assertion under a condition, or with an alternative; as 'If the world is not the work of chance, it must have had an intelligent maker.' . . . The division of propositions into *catégorical* and hypothetical, is, as has been said, a division of them considered merely as sentences; for a like distinction might be extended to other kinds of sentences also. Thus, 'Are men capable of raising themselves to civilization?' 'Go and study books of travels,' are what might be called *catégorical* sentences, though not propositions.—*Whately, Elements of Logic*, b. ii. ch. ii. § 1.

Catégorical. s. Absolute, or unconditional, affirmative or negative (as *yes* or *no*).

A hypothetical proposition is defined to be two or more *catégoricals* united by a copula [conjunction]; and the different kinds of hypothetical propositions are named from their respective conjunctions, viz. conditional, disjunctive, causal, &c. . . . But when the reasoning itself rests on the hypothesis (in which way a *catégorical* conclusion may be drawn from a hypothetical syllogism; and rules have been devised for ascertaining the validity of such arguments at once, without bringing them into the *catégorical* form. (And note, that in these syllogisms, the hypothetical premiss is called the major, and the *catégorical* one the minor.—*Whately, Elements of Logic*, b. ii. ch. iv. § 2.

Catégorically. adv. Directly; expressly; positively; plainly: (as *yes* or *no*).

We must not look, from them, for either discourses, or demonstrations, or positions, directly and *catégorically* to this purpose.—*Fotherby, Theomastie*, p. 295.

Cater. s. [? from the noun *cate*.] Caterer, purveyor. *Obsolete*.

Auster is drawn with a pot pouring forth water, with which descend grasshoppers, *caterpillars*, and creatures bred by moisture.—*Peacham, Compleat Gentleman*.

[The frequency with which the element *cat* appears in the designation of this animal in different dialects makes it probable that it is named from its resemblance to the catkins of a nut, and so originally to the tail of a cat or a dog. Swiss, *teufelskatz*; Lombard, *gatta*, *gattola* (literally, a cat or catkin, a little cat); French, *chenille* (Latin, *canicula*, a little dog), a *caterpillar*; Milanese, *can*, *cagnon* (a dog), a silkworm. The second half of the English word doubtless alludes to the destructive habits of the insect, pilling the trees upon which it is bred. The same notion is expressed by the former element of the Swiss *teufelskatz*. The French *chate-peuse*, a weevil (Norman, *carpeuse*, a *caterpillar*, is probably an accommodation from the English *caterpillar*; or it may be formed from *chate*, *chaton*, a chat or catkin, with allusion to the hairy aspect of a *caterpillar*; Italian, *bruco peloso*.—*Wedgwood, Dictionary of English Etymology*.]

Near akin to their notion of church authority is that of catholicism.—A particular church, indeed, may be catholic in one sense, i.e. true, sound, and pure, and holding the catholic doctrine; but not catholic, i.e. universal. To say Roman-Catholic therefore, as they [the Papists] mean it, is to say 'part-whole' which is a contradiction. The church of Rome, notwithstanding her boasts, is but a part of the catholic church.—*Trapp, Popery truly stated*, l. 2.

Catholicity. s. Catholic character.

It admits of being interpreted in one of two ways: if it be narrowed for the purpose of disproving the catholicity of the creed of Pope Pius, it becomes also an objection to the Athanasian; and if it be relaxed to admit the doctrines retained by the English Church, it no longer excludes certain doctrines of Rome which that church denies.—*Newman, Development of Christian Doctrine*, introd.

Whether the majority be large or small, the catholic church is, as so understood, nothing more than a majority of Christians; its universality, in the view even of its advocates, is merely a preponderance of numbers over the heretical sects; and, therefore, an appeal to the catholicity of the church, in proof that its doctrines are true, is an appeal to the voice of the multitude upon a dispute as to truth.—*Ibid.* ch. iv.

Catholicity. adv. Generally.

So catholicly a curing cordial.

Cátmint. s. [see extract.] Plant so called (Nepeta Cataria).

The later herbarists do call it Herba cattaria and Herba catti, because the cats are very much delighted herewith, for the smell of it is so pleasant to them that they rub themselves upon it, and wallow and tumble in it, and also feed on the branches and leaves very greedily. It is named by the apothecaries Nepeta; but nepeta is properly called (as we have said) Wilde penny-royal; in High Dutch, Katzen muntz; in Low Dutch, Catte cruit; in Italian, Gattaria or Herba gatta; in Spanish, Yerva gatera; in English, Catmint, or Ne and Nep. The true nepeta is Catamenia pulegioides.—*Gerarde, Herbal*, p. 683: ed. 1633.

The cat's-eye is one of the jewels of which the Singalese are especially proud, from a belief that it is only found in their island; but in this I apprehend they are misinformed, as specimens of equal merit have been brought from Quilon and Cochín, on the southern coast of Hindostan. The cat's-eye is a greenish translucent quartz, and when cut en cabochon it presents a moving internal reflexion which is ascribed to the presence of asbestos. The perfection is estimated by the natives in proportion to the narrowness and sharpness of the ray, and the pure olive-tint of the ground over which it plays.—*Sir J. E. Tennent, Ceylon*, pt. i. ch. i.

Since Granville was turned out, there has been no minister in this nation worth the meal that whitened his perwig. They are so ignorant, they scarce know a crab from a *caulflower*; and then they are such dunces, that there's no making them comprehend the plainest proposition.—*Smollett, Expedition of Humphry Clinker*.

The *caulflower* is one of the most delicate and curious of the whole of the Brassica tribe, the flower-buds forming a close firm cluster or head, white and delicate, and for the sake of which the plant is cultivated.—*Loudon, Encyclopædia of Gardening*.

Caúlking. verbal abs. [see extract.]

Caúlking, caulking, or calking in shipbuilding [is] the operation of driving a quantity of oakum, or old ropes untwisted and drawn asunder, into the seams of the planks, or into the intervals where the planks are joined to each other in the sides or decks of the ship, in order to prevent the entrance of water. After the oakum is driven very hard into these seams, it is covered with hot melted pitch or resin to keep the water from rotting it. . . . Kennet derives the word from the barbarous Latin *Calceatura*, shoeing.—*Rees, Cyclopædia*, in voce.

Caúlking-iron. s. Iron chisel for driving the oakum into the seams of ship-timbers.

He [Peter the Great of Russia] repaired to Amsterdam, took a lodging in the dockyard, assumed the garb of a pilot, put down his name on the list of workmen, wielded with his own hand the *caúlking iron* and the mallet, fixed the pumps, and twisted the ropes. That may be miraculously effected in one which is naturally *caúsable* in another.—*Sir T. Browne, Vulgar Errors*.

Caúsál. adj. Relating to causes; implying or containing causes.

Every motion owning a dependence on prerequisite motors, we can have no true knowledge of any, except we would distinctly pry into the whole method of *causal* concatenations.—*Glanville, Sceptis Scientifica*.

Causal propositions are, where two propositions are joined by *causal* particles; as, houses were not built, that they might be destroyed; Rehoboam was

unhappy, because he followed evil counsel.—*Watts, Logic*.

But again: not only must we, in aiming at the formation of a *causal* section in each science of phenomena, consider fluids and their various modes of operation admissible, as well as centers of mechanical force; but we must be prepared, if it be necessary, to consider the forces or powers to which we refer the phenomena, under still more general aspects, and invested with characters different from mere mechanical force.—*Whewell, Novum Organon renovatum*, p. 121.

Causality. s. Agency of a cause; quality of causing. See Causation.

As he created all things, so is he beyond and in them all, in his very essence, as being the soul of their *causalities*, and the essential cause of their existences.—*Sir T. Browne, Vulgar Errors*.

By an unadvised transiency from the effect to the remotest cause, we observe not the connection, through the interposal of more immediate *causalities*.—*Glanville, Sceptis Scientifica*.

But further,—though the Supreme Cause must thus be inconceivably different from all subordinate causes, and immeasurably elevated above them all, it must still include in itself all that is essential to each of them, by virtue of that very circumstance that it is the cause of their *causality*.—*Whewell, Novum Organon renovatum*, b. iii. ch. x. art. 7.

Causally. adv. According to the order or series of causes.

Thus may it more be *causally* made out, what Hippocrates affirmeth.—*Sir T. Browne, Vulgar Errors*.

Causation. s. Act or power of causing.

(Though sometimes used indiscriminately, Causality is the commoner term in *Metaphysics*, where we look most to the connection of cause and effect; and Causation in *Physics*, where we look most for the exhibition of a force.)

Thus doth he sometimes delude us in the conceits of stars and meteors, besides their allowable actions, ascribing effects thereunto of independent *causation*.—*Sir T. Browne, Vulgar Errors*.

We cannot fix the mind upon occurrences, without including these occurrences in a series of causes and effects. The relation of *causation* is a condition under which we think of events, as the relations of space are a condition under which we see objects.—*Whewell, History of Scientific Ideas*, i. 180.

The basis of all these logical operations is the law of *causation*. The validity of all the inductive methods depends on the assumption that every event, or the beginning of every phenomenon, must have some cause; some antecedent, on the existence of which it is invariably and unconditionally consequent. . . . The method of difference authorizes us to infer a general law from two instances; one, in which A exists together with a multitude of other circumstances, and B follows; another, in which A being removed, and all other circumstances remaining the same, B is prevented. What, however, does this prove? It proves that B, in the particular instance, cannot have had any other cause than A; but to conclude from this that A was the cause, or that A will on other occasions be followed by B, is only allowable on the assumption that B must have some cause. . . . The universality of the law of *causation* is assumed in them all. . . . But is this assumption warranted? . . . For this difficulty, which I have purposely stated in the strongest terms it would admit of, the school of metaphysicians who have long predominated in this country find a ready salvo. They affirm, that the universality of *causation* is a truth which we cannot help believing; that the belief in it is an instinct, one of the laws of our believing faculty.—*J. S. Mill, System of Logic*, b. iii. ch. xxi. § 1.

The order of the occurrence of phenomena in time is either successive or simultaneous; the uniformities, therefore, which obtain in their occurrence, are either uniformities of succession or of coexistence. Uniformities of succession are all comprehended under the law of *causation* and its consequences. Every phenomenon has a cause, which it invariably follows.—*Ibid.* ch. xxii. § 1.

Centers of force would no longer represent the modes of *causation* which belonged to the phenomena. Polarization required some other contrivance, such as the undulatory theory supplied.—*Whewell, Novum Organon renovatum*, b. iii. ch. viii. art. 8.

In contemplating the series of causes which are themselves the effects of other causes, we are necessarily led to assume a Supreme Cause in the order of *causation*, as we assume a First Cause in the order of succession.—*Ibid.* ch. x. aph. 63.

We have already seen that a difficulty of the same kind, which arises in the contemplation of causes and effects considered as forming an historical series, drives us to the assumption of a First Cause, as an axiom to which our idea of *causation* in time necessarily leads. And as we were thus guided to a First Cause in order of succession, the same kind of necessity directs us to a Supreme Cause in order of *causation*.—*Ibid.* art. 7.

Causative. adj.

1. Effective as a cause, reason, or agent.

It appeareth to be one of the essential forms of things, as that that is *causative* in nature of a number of effects.—*Bacon, Advancement of Learning.*

As, however, there is scarcely any one of the principles of a true method of philosophizing which does not require to be guarded against errors on both sides, I must enter a *caveat* against another misapprehension, of a kind directly contrary to the preceding.—*J. S. Mill, System of Logic*, § 3.

Cavity . . . in *Anatomy* . . . is used to signify any excavation or even depression of more than ordinary depth, which may exist in or between the solid parts. Hence we find *cavities* existing in bones or formed by the junction of one or more bones. . . . But we have likewise large excavations whose walls are of a more complicated arrangement, and which are destined to receive and protect those organs which are concerned in the functions of innervation, respiration, and digestion . . . namely the cephalic or cranial *cavity* containing the brain, the thoracic *cavity* containing the organs of respiration, and the abdominal *cavity* containing the organs of digestion and of the secretion of urine. To this last is appended, as a continuation, the pelvic *cavity*.—*Todd, Cyclopædia of Anatomy and Physiology, in voce.*

Cávy. s. Animal of the genus *Cavia*; of which the guinea-pig is the best-known species. See extract.

The *cavies* are placed in the eighth and last division [of the Glires or Rodents]. They are among the largest-sized animals of this order, although, when compared with ordinary quadrupeds, they would be termed small. . . . In those regions [certain parts of South America], however, are found the *cavies*, living much in the same manner, equally swift and equally inoffensive as hares, but clothed with hair so fine and thin, as to convey to the touch a feeling of coolness rather than of warmth. Their flesh, generally speaking, is excellent, as we can personally vouch for, these animals being the favourite game of the Brazilian hunters. The first sub-genus on the list is *Hydrochoerus*, of which there is but one species, the *capybara*, or water *cavy* of Brazil. Although it seems to inhabit the sides of nearly all the great rivers of South America, it is probably the largest animal in this order, measuring about three feet in total length.—*Swainson, History of Quadrupeds, § 333.*

Cáyman. s. Name for the alligator. See extract.

The colonists and negroes give to this species [the crocodile of St. Domingo] the name of *cayman*. . . . The tribe of *caymans*, as far as it is known at present, is confined to the continent of America. But the word *cayman* is generally employed by all European colonists to designate the crocodiles which are the most common around their habitations. Thus the *cayman* of St. Domingo is a true crocodile. Authors are but little agreed as to the origin of the name. Bontius will have it to be aboriginal to the East Indies, and Schauten is of the same opinion. Margrave tells us that it comes from Congo, and Rochefort that it was peculiar to the old inhabitants of the Antilles. M. De Tussac considers the assertion of Margrave to be the most correct. The slaves, on their arrival from Africa, at sight of a crocodile gave it immediately the name of *cayman*. It would appear from this that it was the negroes who spread the name throughout America, where it is employed even in Mexico.—*Translation of Cuvier's Règne Animal, Sauri, ix. 196.*

Cazique. s. Title given by the Spaniards to the petty kings and chiefs of several countries in America.

The principal *cazique* of the island came to visit Cortes, with a numerous but ill-appointed equipage.—*Townsend, Conquest of Mexico, i. 15.*

Cázon. s. [Fr. *gazon* = turf.] As the editor has little doubt as to the accuracy of the derivation, he looks upon this as the right spelling. The word is local. In Lincolnshire, and doubtless elsewhere, it has exactly the meaning it bears in the extract. The original application, however, was to the squares of dried turf more usually sold as Peat.

God permitted him to take other fuel, namely, cow's dung, dried *cazings*, to bake his bread with.—*Waterland, Scripture vindicated, iii. 94.*

Cease. s. [P. *decease*.] Extinction; failure. *Rare.*

Dies not alone, but, like a gulph, withdraws
What's near it with it. *Shakespeare, Hamlet, iii. 3.*

You may sooner, by imagination, quicken or slack a motion, than raise or *cease* it; as it is easier to make a dog go slower than to make him stand still.—*Bacon, Natural and Experimental History.*

For even the very look of it repelled
All blastings, witchcrafts, . . .
It killed the fear of thunder and of death;
The discords that conceit engendereth
Twixt man and wife it for the time would *cease*;
The flames of love it quenched, and would increase.
Chapman, Translation of Hero and Leander.

Cease then this impious rage,
Milton, Paradise Lost, v. 845.
But He, her fears to *cease*,

They are not blind, nor yet distinctly see; there is in them no *cécity*, yet more than a *cautioncy*; they have sight enough to discern the light, though not perhaps to distinguish objects or colours.—*Sir T. Browne, Vulgar Errors.*

Cécum. s. [Lat. *cæcum*, neut. of *cæcus* = blind, an adjective used as a substantive,

the word understood being *intestinum* = intestine, or gut. Cecal and Ceciform are among its derivatives.] In *Anatomy*. Part of the intestinal canal where the small intestines join the large, or the part between the ileum and colon, which from bulging in a lateral direction may be treated as if it had no outlet, and were therefore a *blind gut*, though it is really continuous with the colon.

The resemblance of the *cæcum* to the stomach in grainivorous, and particularly the ruminating, animals, as well as its form and situation throughout all the higher classes of the animal kingdom, are circumstances showing that it is an important viscus, and one in which the last act of digestion is performed.—*Copland, Dictionary of Practical Medicine*, in voce.

Cecutiency. s. Tendency to blindness; cloudiness of sight. *Rare*.

(For example see extract under *Cecity*.)

Thus yields the cedar to the axe's edge;
Whose arms gave shelter to the princely eagle;

Whose top branch overpeer'd Jove's spreading tree,
And kept low shrubs from winter's powerful wind.
Shakespeare, Henry VI. Part III. v. 2.

Cedarlike. adj. Resembling a cedar tree.

And growing gravity, so cedar-like.

B. Jonson, New Inn.

Cedarn. adj. Of or belonging to the cedar tree. *Obsolete*.

Nard and Cassia's balmy smells. *Milton, Comus, 989.*

Cede. v. n. [Fr. *céder*; Lat. *cedo*.] Yield: (in the following extract it means *lapse*, and is, probably, an intentional Latinism).

This fertile glebe, this fair domain,
Had well nigh ceded to the slothful hands
Of monks libidinous. *Shenstone, Ruined Abbey.*

Cede. v. a. Resign; give up.

That honour was entirely ceded to the Parthian royal race.—*Drummond, Travels*, p. 256: 1754.
By the peace of Paris, in 1763, it [Dominica] was ceded in express terms to the English.—*Guthrie, Geography*.

Of course Galicia was not to be ceded in this summary manner. Of course, too, its cession by the Austrian government would, in any case, be an act not of simple virtue, but of high political necessity.—*Edwards, Polish Captivity*, vol. ii. ch. ii.

Cedry. adj. Resembling cedar; of the colour of cedar wood. *Rare*.

That which comes from Bergen being long, strait, and clear, and of a yellow or more cedry colour, is esteemed much before the white.—*Evelyn, Sylva*, ii. 3, § 2.

Ceduous. adj. [Lat. *cedo* = cut down.] Adapted for felling: (applied to trees grown for timber). *Rare*.

These we shall divide into the greater and more ceduous, fruticant, and shrubby.—*Evelyn, Sylva, Introduction*, § 3.

Cee. s. Name of the third letter in the Latin alphabet; and, as in one of Latin origin, in the English also.

In the Greek and Hebrew the names of the third letters were *gamma* and *gimel* respectively; their sound being that of the English and Latin *g*, as in *goose* and *grex*. Their forms, however, were those out of which the present C has grown, and their place in the alphabet was that of the modern letter.

In Latin this sound afterwards changed; and the fact of its having done so is one of much importance in the history of spelling. When the original *g* took the sound of *k*, the equivalent to the true *k* of the Greek and Hebrew alphabets (*kappa* and *kaf*) became superfluous. Hence, having dropped out of the Latin, it has been avoided in many of the alphabets derived from it;

especially in those where the language was of Latin origin as well. For further remarks on this point see *Alcaid*.

This eschewal of the use of *k*, wherever it can be avoided, is an influential principle in our own orthography; and, in the opinion of the editor, a mischievous one. Our language is not of Latin, but of German, origin. Neither is *k*, as a letter, excluded from our alphabet, as it is from the French, the Italian, the Spanish, and the Portuguese. On the contrary, we have it without fully using it; the circumstances under which we avail ourselves of it being the following:—

When C precedes *e*, *i*, or *y*, it is liable to be sounded as *s*; and to escape this risk we have recourse to *k*. *King*, for instance, is spelt as it is, because *cing* would be in danger of being sounded *sing*; yet the Anglo-Saxon word was *cyning*. *Kin*, too, was *cyn*; and other examples could be added. These, however, are enough to show that, in respect to the German element of our language, nothing is gained from this letter in the way of etymological representation.

On the other hand, where C is sounded as *s*, *s* (as far as the sound is concerned) may be substituted for it.

Hence, C is, like *x* (*ks*) and *q* (*kw*), a redundant letter. It has its place in our alphabet; but it has it on etymological, rather than on phonetic, principles. Admitting the validity of those, the legitimate use of it is limited to words of Latin origin. That it goes far beyond may be seen under the entry already referred to, as well as under *Can* and *Ken*.

Historically, its prerogative over *k* is more defensible. As our alphabet was probably derived from the Latin through the British or Irish (for the German languages other than English used *k* from the beginning), C was the letter which in Anglo-Saxon represented the sound of *k*: but *k* was then wholly excluded. At present the two letters exist concurrently. The former, however, partly from its prerogative as the older letter, and partly from the Latin principle being unduly extended to words of Greek origin (in which language C had no existence), as well as to others from languages wholly foreign to the Latin, has encroached on the domain of the latter.

Preceding *h*, as in the *ch* of *chest* (*tshest*), &c., C approaches the character of a necessary, rather than a redundant, letter. Here, however, it is less a separate substantive sign than an element in a combination.

The complement to these remarks will be found under *Gee* and *Kay*.

This letter is derived from the Latin alphabet, in which it first appears. But even in that alphabet it originally possessed the power of *g*, as pronounced in *goose*. Thus the Roman proper names *Caius* and *Cneius*, which retained this sound, are correctly represented in the Greek character by *Ταῖος* and *Τρῆνος*; and the Dullian inscription, the orthography of which, however, seems to belong to a later date than the events celebrated in it, presents *macestratus*, *lectones*, *pucnandod*, *ecfoicent*, in the place of the modern forms, *magistratus*, *legiones*, *pugnando*, *effugient*. Indeed the poet Ausonius expressly states that C once performed the duty of G; *Gamma vice functa prius C*. . . . The letter *c* in English is pronounced as *s* before *e*, *i*, and *y*, and as *k* before *a*, *o*, *u*. This variety in the power of the letter seems difficult to account for; but it may be observed that *i*, *e*, belong to one end of the vowel series, *a*, *o*, *u* to the other; and it is further to be noticed that the vowels *i* and *e*, when they precede vowels, have a power approaching to that of *y* in *youth*, and that if, in addition to this, *c* or *g* precede, there often results a sound like that at the begin-

ning of the words *church* and *John*, and this sound of *ch* is not very different from a sibilant. The vowels *i* and *e* produce a similar sound when preceded by a *d* or *t* and followed as before by a vowel. Thus from *ration* the Italians have obtained *ragione*; and from *radio*, *raggio*; from *Diana* the rustics of ancient Italy made *Jana*. These considerations are perhaps supported by the employment of the little mark called *cedilla* in the French language, which is used to denote that *c* is to be pronounced as an *s* even before the other vowels, as *ca*; for the mark appears to have been originally an *i*.—*Key, The Alphabet*.

Ceil. v. a. Overlay, or cover, the inner roof of a building.

And the greater house he ceiled with fir-tree, which he overlaid with fine gold.—*2 Chronicles*, iii. 5.

How will he, from his house ceiled with cedar, be content with his Saviour's lot, not to have where to lay his head?—*Dr. H. More, Decay of Christian Piety*.

Ceiling. s. [see last extract.] Inner roof. Varnish makes ceilings not only shine, but last.—*Bacon*.

And now the thicken'd sky
Like a dark ceiling stood; down rush'd the rain
Impetuous. *Milton, Paradise Lost*, xi. 742.

So when the sun by day, or moon by night,
Strike on the polish'd brass their trembling light,
The glittering species here and there divide,
And cast their dubious beams from side to side:
Now on the walls, now on the pavement play,
And to the ceiling flash the glaring day. *Dryden*.

[*Ceiling*.—The modern spelling has probably arisen from an erroneous notion that the word is derived from French *ciel*, tilt, canopy, tester; Italian, *cielo*, in the same senses, and also in that of English, ceiling. It was formerly written *ceel*, having the meaning of wainscoting, covering with boards. To *seel* a room, lambris une chambre; *seeling*, lambris, menuiserie. (Sherwood.) Plancher, to plank or floor with planks, to *seel* or close with boards; plancher, a boarded floor, also a *seeling* of boards; planché, boarded, floored with planks, closed or *seeled* with boards. (Cotgrave.) The essential notion is thus defending the room against draughts by closing or *sealing* up cracks, from Old French, *seel*, a seal. We still use the metaphor in the sense of closing with respect to the eyes, sealed eyelids. French, *stiller les yeux*, to *seel* or sew up the eyelids. Italian, *cigliare*, to *seel* a pigeon's eye. What we now call the ceiling was formerly called the upper-ceiling, French, *sus-lambrie*, to distinguish it from the *seeling* or wainscoting of the walls. The upper *seeling* of a house, *ceffito*, *cielo*, (Torrano.) When wainscoting went out of use the distinctive qualification was no longer necessary, and the term *ceiling* was appropriated to the coat of plaster which *seals* up the under side of the rafters in a room.—*Wedgwood, Dictionary of English Etymology*.]

Celandine. s. [see last extract.] Name given to two native plants, the greater Celandine and the lesser Celandine. The former is the *Chelidonium majus* a papaveraceous, the latter the *Ranunculus Ficaria* (Pilewort and Buttercup) a ranunculaceous, plant. The evidence, however, that either of the terms has any claim to be considered a true vernacular name is but slight. They seem to represent merely the approximate translations of the systematic botanists.

The division into the *greater* and *lesser* is to be found in Pliny and in Dioscorides; the text of the former being obscure. 'Animalia quoque invenere herbas, in primisque *chelidonium*. Hac enim hirundines oculis pullorum in nido restitutum visum, ut quidam volunt, etiam erutis oculis. Genera ejus duo, major fruticosa caule. . . . Minori folia edera rotundiora, minus candida. Succus croci mordax, semen papaveris.'

Now, unless we so construe the text as to separate the notice of the juice and the seed from the other notices of the *Chelidonium minus*, we meet with a difficulty; inasmuch as the papaveraceous, or poppy-like, seed is the characteristic of the *greater* species.

[Lat. *chelidonium*; Gr. *χελιδώνιον*, from *χελιδών*, swallow. 'Not,' says Gerard, 'because it first springeth at the coming in of the swallows, or dieth when they go away, for, as we have said, it may be founde all the year, but because some holde opinion that with this herbe the damps restore sight to their young ones, when their eyes be put out.' An old notion quoted from Dodoens, and copied by him from Pliny, and by Pliny from Aristotle. This wonderful fact is received and repeated by every bota-

CELA

nical writer of those days, and is embodied by Macer in the couplet—

Cecatis pullis hac lumina mater hirundo
(Plinius ut scripsit) quamvis sint eruta reddit.
—Dr. Prior, *Popular Names of British Plants*.]

6. In *Anatomy*. Vesicle consisting of a nucleus, covering, and fluid, elementary to all the tissues both vegetable and animal: (in this sense with numerous compounds and derivatives, as Cellular, Cellulose, &c.).

Henle and others have questioned the title of the Gregarina to be regarded as an organic species or individual at all, or as anything more than a monstrous cell. . . . In 1848 Kölliker published an elaborate memoir on the genus, in which good and sufficient grounds are given for concluding that the Gregarina . . . stands on the lowest step of the animal series, parallel with that of the single-celled species of the vegetable kingdom. . . . [It] consists of a cell-membrane, of the fluid and granular contents of the cell, and of the nucleus with (occasional) nucleoli. . . . Sometimes the establishment of the two centres of assimilative force separates the cell-contents into two groups, without the concomitant division of the cell-wall; but an inner partition-wall is developed. Stein believes that this is the result of the conjugation of two individuals. However this may be, another mode of propagation is then set up; the granules of the divided cell-contents, as if impregnated, develop cells, divide and subdivide, and are ultimately resolved into embryos having the form of Navicellae. . . . The firm nucleus of the Gregarina answers to that of the Polygastrian; the cell-membrane to the ciliated integument, and the granular contents to the more-specialised cells which surround the nucleus. The Gregarina may be regarded as a parasitic Monad, and the most simple of the animal kingdom. It differs from the single-celled plant by the contractility of its tissue, and the solubility of its cell-wall by acetic acid. —Owen, *Lectures on Comparative Anatomy*, lect. iv.

As to the judgment of Cato the *censor*, he was well punished for his blasphemy against learning, in the same kind wherein he offended; for when he was past threescore years old, he was taken with an extreme desire to go to school again, and to learn the Greek tongue, to the end to pursue the Greek authors; which doth well demonstrate, that his former *censure* of the Grecian learning was rather an affected gravity, than according to the inward sense of his own opinion.—*Bacon, Advancement of Learning*, i. (Ord MS.)

I reflected that it was the proper office of the magistrate to punish only knaves, and that we had a *censor* of Great Britain, for people of another denomination.—*Tatler*, no. 212.

'And how dare you,' said her manager, assuming a *censórial* severity, which would have crushed the confidence of a Vestris, and disarmed that beautiful rebel herself of her professional caprices.—*Lamb, Essays of Elia, Elisiomiana*.

Censórian. adj. Relating to the censor. *Rare*.

As the chancery had the pretorian power for equity, so the star-chamber had the *censórian* power for offences under the degree of capital.—*Bacon*.

O! let thy presence make my travels light,
And potent Venus shall exalt my name
Above the rumours of *censórious* fame. *Prior*.

With of.

A dogmatical spirit inclines a man to be *censórious* of his neighbours.—*Watts, Improvement of the Mind*.

With upon.

He treated all his inferiours of the clergy with a most sanctified pride; was rigorously and universally *censórious* upon all his brethren of the gown.—*Swift*.

Censóriously. adv. In a censorious manner.

If it be suspected that this great hatred of the Christians moved this Gentile to animadvert too *censóriously* upon their carriage, then it will be reasonable to enquire what others have delivered in this matter.—*J. Addison, Life of Mahomet*, p. 123.

Censóriousness. s. Attribute suggested by

Censorious; disposition to reproach; habit of reproaching; faultfinding; taking of exception; cavilling.

Some silly souls are prone to place much piety in their mawkish plainness, and in their *censoriousness* of others, who use more comely and costly curiosities.—*Jeremy Taylor, Artificial Handsomeness*, p. 87.

Sourness of disposition, and rudeness of behaviour, *censoriousness* and sinister interpretation of things, all cross and distasteful humours, render the conversation of men grievous and uneasy to one another.—*Archbishop Tillotson*.

Censorship. s.

1. Office of censor.

In his own phrase, he [Smith] whitened himself, having a desire to obtain the *censorship*, an office of honour and some profit in the college.—*Johnson, Lives of the Poets, Smith*.

2. Time during which the office of censor is held.

It was brought to Rome in the *censorship* of Claudius.—*Sir T. Browne, Vulgar Errors*.

3. As applied to the *Press*. Power or practice of superintending, revising, authorising, or otherwise influencing the printed literature of a country, especially that which is periodical and political.

These means may be reduced to the five following heads:—1. Punishment for religious error; 2. Reward for religious orthodoxy; 3. Endowment of clergy and of public worship; 4. Public instruction; 5. *Censorship* of the press.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. ix. Freedom too was wanting, a want as fatal as that of either capital or skill. The press was not indeed at that moment under a general *censorship*. The licensing act, which had been passed soon after the Restoration, had expired in 1679. Any person might therefore print, at his own risk, a history, a sermon, or a poem, without the previous approbation of any officer: but the judges were unanimously of opinion that this liberty did not extend to Gazettes, and that, by the common law of England, no man, not authorised by the crown, had a right to publish political news.—*Macaulay, History of England*, ch. iii.

I have already mentioned that the effect of the *censorship* in the kingdom is to prevent newspapers from publishing one syllable of comment upon anything that takes place in Russia or Poland, &c.—*Edwards, Polish Captivity*, ii. ch. i.

Censual. *adj.* Relating to a census. *Rare.* He sent commissioners into all the several counties of the whole realm, who took an exact survey, and described in a *censual* roll or book, all the lands, titles, and tenures, throughout the whole kingdom.—*Sir W. Temple, Introduction to the History of England*, ii. 574. (Ord MS.)

Remains the *censure* of this hellish villain.
Shakespeare, Othello, v. 2.

4. Spiritual punishment inflicted by some ecclesiastical judge.
Upon the unsuccessfulness of milder medicaments,
Use that stronger physick, the *censures* of the church.
—*Hammond*.

Censure. *v. a.*

1. Blame; brand publicly.
Men may *censure* thine [weakness]
The gentler, if severely thou exact not
More strength from me than in thyself was found.
Milton, Samson Agonistes, 787.

2. Condemn by a judicial sentence.
Has *censur'd* him
Already, and, as I hear, the provost hath
A warrant for his execution.
Shakespeare, Measure for Measure, i. 5.

3. Judge; estimate.
The onset and retire
Of both your armies; whose equality
By our best eyes cannot be *censured*.
Shakespeare, King John, ii. 2.

Should I say more, you well might *censure* me
(What yet I never was) a flatterer.
Beaumont and Fletcher, Elder Brother.

When two are stripe, long ere the course begin,
We wish that one should lose, the other win;
And one especially do we affect
Of two gold ingots, like in each respect:
The reason no man knows; let it suffice,
What we behold is *censured* by our eyes.
Greene, Hero and Leander.

Censure. *v. n.* Judge; give an opinion. *Rare.*
'Tis a passing shame,
Should *censure* thus on lovely gentlemen.
Shakespeare, Two Gentlemen of Verona, i. 2.

Censurer. *s.* One who blames; one who reproaches.
We must not stint
Our necessary actions, in the fear
To cope malicious *censurers*.
Shakespeare, Henry VIII. i. 2.

A statesman, who is
possess of real merit, should

look upon his political *censurers* with the same neglect that a good writer regards his critics.—*Addison*.

Censuring. *verbal abs.* Reproach; blame.

The like *censurings* and despising have embittered the spirits, and whetted both the tongues and pens, of learned men one against another.—*Bishop Sanderson*.

Census. *s.* [Lat.] Taking of the numbers of the population of any district or country, or of the members of any class or denomination.

This is manifest from the history of the Jewish nation, from the account of the Roman *census* and registers of our own country, where the proportion of births to burials is found upon observation to be yearly as fifty to forty.—*Bentley, Sermons*, p. 107.

I shall say little here of the *census* of the Romans, it being a thing so well known; and shall only stay to remark, that there were, in their books or registers, not only the condition and quality of all people, but also their characters.—*Harris, On the 53rd chapter of Isaiah*.

Cent. *s.* [Lat. *centum* = hundred.—This word is not only Latin in origin, and abbreviated in form, but it is generally part of a combination rather than a simple word; i.e. it is generally preceded by *per*, which is the Latin for *by*: thus *five per cent* is *five by the hundred*. In *cent per cent*, however, it is a separate word.] Hundred.
The demon makes his full descent
In one abundant shower of *cent per cent*. *Pope*.

Centaur. *s.* [Lat. *centaurus*.]

1. Mythological being, with the head, trunk, and arms of a man, joined to the trunk and extremities of a horse.

Down from the waist they are *centaurs*, though
women all above.—*Shakespeare, King Lear*, iv. 6.
The idea of a *centaur* has no more falsehood in it than the name *centaur*.—*Locke*.

2. Archer in the zodiac.
The cheerless empire of the sky,
To Capricorn, the *Centaur* archer, yield. *Thomson*.

Centaurlike. *adj.* Having the appearance or equestrian habits of a centaur.

You remember the ship we saw once, when the
sea went high upon the coast of Argos; so went the
beast. But he [Dametas], as if *centaurlike* he had
been one piece with the horse, was no more moved
than one is with the going of his own legs.—*Sir P. Sidney, Arcadia*, ii.

Centaury. *s.* Name given to plants of the genus *Centauria*: (the common, or lesser, *centaury*, however, is a *Gentian*, *Erythraea Centaurium*).

Add pounded galls, and roses dry,
And with Cecropian thyme strong-scented *centaury*.
Dryden.

Centenary. *adj.* (accented often, and perhaps rightly, on the first syllable; with prefixes, however, in the opinion of the editor, *centenary* forms the better combination.) [Lat. *centenarius*.] Connected with the number of a hundred, as in 'centenary festival,' and in *bicentenary*, *tricentenary*, and other compounds.

Centenary. *s.* Number of a hundred.
In every *centenary* of years from the creation,
some small abatement should have been made.—*Hakewill, Apology*.

Centenier. *s.* Centurion. *Rare.*

and village, and thereon were termed *centeniers* or
centurians.—*Time's Store House*, p. 19. (Ord MS.)

Centennial. *adj.* Consisting of a hundred years.

To her alone I rais'd my strain
On her *centennial* day. *Mason, Poems*.

Center. *s.* See *Centre*.

Of this nature is the maxim now stated. That in
any combination of matter any how supported, the
center of gravity will descend into the lowest position
which the connexion of the parts allows it to
assume by descending. It is easily seen that this
maxim carries to a much greater extent the principle
which the Greek mathematicians assumed, that
every body has a *center* of gravity, that is, a
point in which, if the whole matter of the body be
collected, the effect will remain unchanged.—*Whe-
well, History of Scientific Ideas*, i. 226.

Centesimal. *s.* In *Arithmetic*. Hundredth part: (applied to the next step after *decimal* in fractions).

The neglect of a few *centesimals* in the side of the
cube, would bring it to an equality with the cube of
a foot.—*Arbutnot, Table of Ancient Coins, Weights,
and Measures*.

Centesimal. *adj.*

1. Hundredfold.

How this multiplication may well be conceived,
and that this *centesimal* increase is not naturally
strange, you that are no stranger in agriculture, old
and new, are not likely to make great doubt.—*Sir T.
Browne, Tracts*, p. 40.

2. Hundredth.

In *centesimal* proportion, stony matter 18; fine
silicious 29; argil 22; mild calx 31; 100.—*Kirwan,
Essay on Manures*, p. 80.

Centesimal. *s.* Selection, for some particular purpose, of every hundredth person.

Sometimes the criminals were decimated by lot,
as appears in Polybius, Tacitus, Plutarch, Julius
Capitolinus, who also mentions a *centesimal*.—*Jeremy Taylor, Ductor Dubitantium*, ii. 122. (Ord MS.)

Centigrade. *adj.* [Lat. *gradus* = step or degree.] Divided into a hundred degrees, as 'the *Centigrade* Thermometer.'

Centiloquy. *s.* [Lat. *centiloquium*, from *centum* = hundred, *loquor* = speak.] Hundred sayings: (applied in the extract to a work of Ptolemy's consisting of a hundred aphorisms). A *proper* rather than a *common* term.

Ptolemy, in his *Centiloquy*, attributes all these
symptoms which in melancholy men to celestial
influences.—*Burton, Anatomy of Melancholy*, p. 189.

Centipede. *s.* Name given to annulose animals of the class *Inidæ*: (applied in England to two long wingless animals, with a hard integument, the shape of a worm, and numerous legs, found in old wood and in soil). See *Milleped*.

The certainty with which an accidental pressure
or unguarded touch is resented and returned by a
bite, makes the *centipede*, when it has taken up its
temporary abode within the sleeve or fold of a dress,
by far the most unwelcome of all the Singhaless
assailants. The great size (little short of a foot in
length) to which it sometimes attains renders it
formidable.—*Sir J. E. Tennent, Ceylon*, pt. ii. ch. vii.

Each of the many legs of a *centipede*, under the
influence of its own ganglion goes on receiving im-
pressions and performing motions quite independent
of the rest: continuing to do so after the creature
has been cut in two. And on watching the wave of
movements which progresses from end to end of the
series of legs—seen still more clearly in a *julus*—it
will be observed that at any moment each leg is in a
different phase of its rhythmical movement; and
that thus there are, at the same time, in the same
organism, a great number of like changes, each at a
separate stage of evolution.—*Herbert Spencer, In-
ductions of Biology*.

Cento. *s.* [Lat. *cento* = garment made up of shreds and patches.] Composition formed by working into a whole scraps from different authors (opposed to *original* composition); paste-and-scissors work.

It is quilted, as it were, out of shreds of divers
poets, such as scholars call a *cento*.—*Camden, Remains*.

If any man think the poem a *cento*, our poet will
but have done the same in jest which Boileau did in
earnest.—*Advertisement to Pope's Dunciad*.

Central. *adj.* Relating to the centre; constituting the centre; placed in the centre or middle.

There is now, and was then, a space or cavity in the
central parts of it, so large as to give reception
to that mighty mass of water.—*Woodward, Essay
towards a Natural History of the Earth*.

Umbriel, a dusky melancholy sprite,
Down to the *central* earth, his proper scene,
Repairs. *Pope, Rape of the Lock*.

Centrality. *s.* State or being of a centre.

An actual *centrality*, though as low as next to
nothing.—*Dr. H. More, Notes upon the Song of the
Soul*, p. 354.

Centralization. *s.* Reduction to a centre. See *Centralize*.

The civil organization of the kingdom was based
on the principle of complete *centralization*. . . .
Prefects called *nomarchs*, and sub-prefects called
eparches, had been already trained to the service by
Cynodias, and no difficulty was found in intro-
ducing the outward appearance of a regular and
systematic action of the central government over the
whole country.—*Finlay, History of the Greek Revolu-
tion*, b. v. ch. iv.

Centralize. *v. a.* Concentrate in some particular part, as an actual or conventional centre: (generally applied to the process by which the municipal or local administration of a country is overridden by the administration of the court or capital).

Thus Maurus was enabled to use in his attempt to centralize the power of the government.—*Finlay, History of the Greek Revolution*, b. v. ch. iv.

Centrally. *adv.* (the *l* really doubled, i.e. *central-ly*.) With regard to the centre.

Though one of the feet most commonly bears the weight, yet the whole weight rests centrally upon it.—*Dryden*.

Centre. *s.* [Lat. *centrum*: Gr. *κέντρον* = point.] Middle; that which is equally distant from all extremities.

If we frame an image of a round body all of fire, the flame proceeding from it would diffuse itself every way; so that the source, serving for the centre there, would be round about an huge sphere of fire and light.—*Sir K. Digby, Treatise on the Nature of Bodies*.

Centre. *v. a.*

1. Place on a centre; fix as on a centre.

One foot he centred, and the other turn'd Round through the vast profundity obscure.—*Milton, Paradise Lost*, vii. 228.

2. Collect to a point.

By thy each look, and thought, and care, 'tis shown, Thy joys are centred all in me alone. Prior. He may take a range all the world over, and draw in all that wide air and circumference of sin and vice, and centre it in his own breast.—*South*. O impudent, regardless of thy own, Whose thoughts are centred on thyself alone. Dryden.

I lost two children in their infancy, by the small-pox: so that I have one son only, in whom all our hopes are centred.—*Smollett, Expedition of Humphrey Clinker*.

Centre. *v. n.*

1. Rest on; repose on: (as bodies in equilibrium).

Where there is no visible truth wherein to centre, error is as wide as men's fancies, and may wander to eternity.—*Dr. H. More, Decay of Christian Piety*.

2. Be placed in the midst or centre.

As God in heaven, Is centre, yet extends to all; so thou, Centring, receiv'st from all those orbs.—*Milton, Paradise Lost*, ix. 109.

3. Become collected to a point; gravitate.

What hopes you had in Diomed, lay down: Our hopes must centre in ourselves alone. Dryden. The common acknowledgments of the body will at length centre in him, who appears sincerely to aim at the common benefit.—*Bishop Atterbury*.

Centric, and Centricial. *adj.* Placed in the centre.

Some that have deeper digg'd Love's mine than I, Say, where his centrick happiness doth lie.—*Donne, Poems*, p. 32.

Centrifugal. *adj.* [Lat. *centrum* = centre, *fugio* = fly, avoid.] Chiefly in *Mechanics*. Having a tendency to recede from the centre.

They described an hyperbola, by changing the centripetal into a centrifugal force.—*Cheyne*. In the same manner the centrifugal force is not a distinct force in a strict sense, but only a certain result of the first law of motion, measured by the portion of centripetal force which counteracts it. Comparisons of quantities so heterogeneous imply confusion of thought, and often suggest baseless speculations and imagined reforms of the received opinions.—*Whewell, History of Scientific Ideas*, i. 285.

Centring. *verbal abs.* Gravitating towards a centre.

It was attested by the visible centring of all the old prophecies in the person of Christ, and by the completion of these prophecies since, which he himself uttered.—*Bishop Atterbury*.

Centripetal. *adj.* [Lat. *centrum* = centre, *peto* = seek.] Chiefly in *Mechanics*. Having a tendency to the centre.

The direction of the force, whereby the planets revolve in their orbits, is towards their centres; and this force may be very properly called attractive, in respect of the central body, and centripetal, in respect of the revolving body.—*Cheyne*. (For another example see Centrifugal.)

Centry. *s.* Same as Sentry.

The thoughtless wits shall frequent forfeits pay, Who 'gainst the centry's box discharge their tea. Gay.

Céntuple. *adj.* [Lat. *centuplex*.] Hundred-fold.

It were a vengeance centuple for all facinorous acts that could be named.—*B. Jonson, Epicene*.

Céntuple. *v. a.* Multiply a hundredfold.

If the contagion Of my misfortunes had not spread itself Upon my son Ascanio, though my wants Were centupled upon myself, I could be patient.—*Beaumont and Fletcher, Spanish Curate*.

Then would he centuple thy former store, And make thee far more happy than before.—*G. Sandys, Paraphrase of the Book of Job*.

This shall the meek with pleased eyes Behold, and centuple their joys.—*Id., Psalms*, p. 111.

Céntuplicate. *v. a.* Make a hundredfold; repeat a hundred times.

I performed the civilities you enjoined me to your friends, who return you the like centuplicated.—*Howell, Letters*, iv. 2.

Cénturion. *s.* [Lat. *centurio*, -onis.] Military officer among the Romans, who commanded a hundred men.

Have an army ready, say you?—A most royal one. The centurions, and their charges, distinctly billeted in the entertainment, and to be on foot at an hour's warning.—*Shakespeare, Coriolanus*, iv. 3.

Céntury. *s.* [Lat. *centuria*, from *centum* = hundred.]

1. Hundred: (usually employed to specify time; as, the second century).

The nature of eternity is such, that, though our joys, after some centuries of years, may seem to have grown older, by having been enjoyed so many ages, yet will they really still continue new.—*Boyle*. And now time's whiter series is begun, Which in soft centuries shall smoothly run. Dryden.

The lists of bishops are filled with greater numbers than one could expect; but the succession was quick in the three first centuries, because the bishop often ended in the martyr.—*Addison*.

The decision of the judges increased the irritation of the people. A century earlier, irritation less serious would have produced a general rising. But discontent did not now so readily as in an earlier age take the form of rebellion.—*Macaulay, History of England*, ch. i.

2. Hundred, simply.

Romulus, as you may read, did divide the Romans into tribes, and the tribes into centuries or hundreds.—*Spenser*.

When with wood leaves and weeds I have strew'd his grave, And on it said a century of prayers, Such as I can, twice o'er, I'll weep and sigh.—*Shakespeare, Cymbeline*, iv. 2.

3. In botanical and zoological classification. See extract.

It has been already noticed that even that vague application of the idea of resemblance which gives rise to the terms of common language, introduces a subordination of classes, as man, animal, body, substance. Such a subordination appears in a more precise form when we employ this idea in a scientific manner as we do in natural history. We have then a series of divisions, each inclusive of the lower ones, which are expressed by various metaphors in different writers. Thus some have gone as far as eight terms of the series, and have taken, for the most part, military names for them; as Hosts, Legions, Phalanxes, Centuries, Cohorts, Sections, Genera, Species. But the most received series is Classes, Orders, Genera, and Species; in which, however, we often have other terms interpolated, as Sub-genera, or sections of genera. The expressions Family and Tribe are commonly appropriated to natural groups; and we speak of the Vegetable, Animal, Mineral Kingdom; but the other metaphors of Provinces, Districts, &c., which this suggests, have not been commonly used.—*Whewell, History of Scientific Ideas*, ii. 180.

Cephalalgic. *s.* [Gr. *κεφάλη* = head, *ἀλγος* = pain.] Remedy, or nostrum, for the headache.

Administer to each of them lenitives, aperitives, abstersives, corrosives, restringents, palliatives, laxatives, cephalalgics, iterics, apoplegmatics, acoustics, as their several cases required.—*Swift, Gulliver's Travels*, pt. iii. ch. vi. (Ord MS.)

Céphalic. *adj.* [Fr. *céphalique*; Gr. *κεφαλή* = head.] Appertaining to the head.

Cephalic medicines are all such as attenuate the blood, so as to make it circulate easily through the capillary vessels of the brain.—*Arbuthnot, On the Nature and Choice of Aliments*.

I dressed him up with soft folded linen, dipped in a cephalick balsam.—*Wiseman, Surgery*.

You are right, Brush; there is no washing the blacknoor white. Mr. Sterling will never get rid of Blackfriars—always taste of the Barachio—and the poor woman, his sister, is so busy, and so notable, to

make one welcome, that I have not yet got over the fatigue of her first reception; it almost amounted to suffocation. I think the daughters are tolerable. Where's my cephalic snuff?—*Colman and Garrick, The Clandestine Marriage*, ii. 1.

Céphalopod. *s.* [Gr. *κεφάλη* = head, *πούς*, *πόδος* = foot.] Mollusk of the class so called; highest sub-kingdom. See last extract.

The Mollusks are the next class; and these are divided into Cephalopoda, Gasteropoda, and the like.—*Whewell, Novum Organon renovatum*, p. 335.

As Professor Owen considers that the animals of the shells usually classed together as the Nautilus spirula constitute three distinct species, we have not ventured to cite any foreign synonyms, since the known shells cannot be distinguished from each other, and the cephalopod has not hitherto been discovered in the British seas. In regard to indigenuousness, 'the claims of the present species,' observed Dr. Fleming, 'are doubtful.'—*Forbes and Hanley, British Mollusca*.

The molluscos province may thus be primarily divided into Acephala and Encephala. The acephalous Mollusca are all aquatic, and are divided into classes according to the modifications of their integument or of their gills. . . . The encephalous Mollusca are divided into classes according to the modifications of the locomotive organs. The Pteropoda swim by two wing-like muscular expansions extended outwards from the sides of the head. The Gasteropoda creep by means of a muscular disc attached to a greater or less extent of the under part of the body. The Cephalopoda have all or part of their locomotive organs attached to the head, generally in the form of muscular arms or tentacula. In the last class only do we find, in the present series of animals, an internal skeleton, combined, in some, with a shell.—*Owen, Lectures on Comparative Anatomy*, lect. xx.

Cérate. *s.* In Surgery. Salve, or unguent, in which wax is one of the constituents.

In one case which came under my observation a blister on the scalp was dressed for four days with this cerate [of cantharides]. On the fourth day the head swelled to an alarming size.—*Thompson, London Dispensary*, note, p. 818.

Cere. *v. a.* [Lat. *cera* = wax.] Wax. Rare.

You ought to pierce the skin with a needle, and strong brown thread cored, about half an inch from the edges of the lips.—*Wiseman, Surgery*.

Cere. *s.* In Falconry and Zoology. Naked skin, like a small cerecloth, covering the base of the bill in the hawk kind.

The hen-bird had a black cere.—*White, Natural History of Selbourne*, p. 109.

Céreal. *adj.* and *s.* [Lat. *cerealis*, appertaining to Ceres, the goddess of corn.] Term applied to wheat, oats, barley, and other grasses grown in agriculture for the sake of their seed as food: (in opposition to meadow grasses on the one side, and leguminous and root crops on the other).

The chief, though not the exclusive, nutriment of the adult is wheaten flour, and the flour of the cereals, oats, barley, rye, and maize. . . . But though the cereals which are most largely employed as staple articles of food, resemble thus closely the food of the infant, and the proportion of the two leading elements in wheat approximate to the proportions in milk more nearly than in the other grains, it must not be supposed that the chemical composition of milk and of wheat presents more than this general resemblance.—*Dr. Guy, On Dietaries*.

Cereálions. *adj.* Pertaining to corn. Rare.

The Greek word 'spermata,' generally expressing seeds, may signify any edulious or cereálions grains.—*Sir T. Browne, Tracts*, p. 16.

Cérebél. *s.* [Lat. *cerebellum*.] Hinder division of the brain. Rare; the common form, though Latin, being *cerebellum*.

In the head of man, the base of the brain and cerebel, yea, of the whole skull, is set parallel to the horizon.—*Derham*.

Cerebellar. *adj.* Belonging to the cerebellum.

If, on the other hand, we compare the Cyclostome and Plagiostome Cartilaginous Fishes, in reference to their modes and powers of locomotion, we shall find a contrast which directly accords with that in their cerebellar development.—*Owen, Lectures on Comparative Anatomy*, lect. viii.

Cérebral. *adj.* Relating to the brain.

I refer the varieties of moral feeling, and of capacity for knowledge and reflection, to those diversities of cerebral organization, which are indicated by, and correspond to, the difference in the shape of the skull. If the nobler attributes of man reside in the cerebral hemispheres; if the prerogatives which lift him so much above the brutes are

satisfactorily accounted for by the superior development of those important parts; the various degrees and kinds of moral feeling and of intellectual power may be consistently explained by the numerous and obvious differences of size in the various cerebral parts, besides which there may be peculiarities of internal organization not appreciable by our means of inquiry.—*Lawrence, Lectures*, p. 500. (Ord MS.)
The pseudobranchia is thus a kind of 'rete mirabile' for both the cerebral and ophthalmic circulation in the sturgeon.—*Owen, Anatomy of Vertebrates*, p. 489.

Cerebrum. *s.* [Lat.] Brain; front portion, as opposed to Cerebellum, the hinder portion.

Surprise my readers, whilst I tell 'em
Of cerebrum and cerebellum. *Prior, Alma*.

Cerecloth. *s.* Cloth smeared over with glutinous matter.

The ancient Egyptian mummies were shrowded in a number of folds of linen, besmeared with gums, in manner of cerecloth.—*Bacon*.

'Twere damnation,
To think so base a thought; it were too gross
To rib her cerecloth in the obscure grave.

Shakespeare, Merchant of Venice, ii. 7.
His honourable head
Seal'd up in salves and cerecloths, like a packet,
And so sent over to an hospital.

Beaumont and Fletcher, Mad Lover.

Cérement. *s.* [L. Lat. *cerementum* = coating of wax.] Cloths dipped in melted wax, in which dead bodies were enfolded when they were embalmed.

Let me not burst in ignorance, but tell,
Why thy canonized bones, hallowed in earth,
Have burst their cerements.

Shakespeare, Hamlet, i. 4.

Ceremonial. *adj.* See last extract.

1. Relating to ceremony, or outward rite; ritual.

What will be said? What mockery will it be,
To want the bridegroom, when the priest attends,
To speak the ceremonial rites of marriage?

Shakespeare, Taming of the Shrew, iii. 2.
We are to carry it from the hand to the heart, to improve a ceremonial nicety into a substantial duty, and the modes of civility into the realities of religion.

—*South*.
Christ did take away that external ceremonial worship that was among the Jews.—*Bishop Stillingfleet*.

2. Formal; observant of old forms.

Very magnificent and ceremonial in his outward comportment; in his private carriage humble.—*Sir B. Sandys, State of Religion*.

Oh monstrous, superstitious puritan,
Of refin'd manners, yet ceremonial man,
That when thou meet'st one, with enquiring eyes
Dost search, and, like a needy broker, prize
The silk and gold he wears. *Donne, Poems*, p. 119.
With dumb pride, and a set formal face,
He moves in the dull ceremonial track,

Cesura. s. [Lat. = cutting.] In *Prosody*.

Division of a foot or measure between two words for the sake of securing an accent on a certain syllable. (This is necessary in those languages where words with an accent on the last syllable are either non-existent or rare. In such cases, whenever the metre requires any particular syllable to be accented, that syllable cannot be final; and the group of syllables, whether we call it *foot* or *measure*, to which it belongs, must be distributed over two words, i.e. must be cut.)

[The above definition is that of the present editor. In the preceding edition the entry is:

CESURA. 1. A figure in poetry by which a

short syllable after a complete foot is made long.

2. The natural pause or rest of the voice, which,

falling upon some part of a verse, divides it into

two unequal parts.]

Concerning these definitions it may safely

be said that the first is the explanation of

a word which has no place in the English language; whilst the second gives us little more than another term for pause; and, indeed, in the fullest work we have upon the metres of our language, Dr. Guest's 'English Rhythms,' the word *cesura* is not only avoided, but, in a long notice of the subject to which it might, according to the preceding definition, be legitimately applied, the word *pause* is used throughout. Perhaps such facts as these recommend its total elimination, rather than its retention with a changed and almost technical sense; in any treatise, however, upon metre in general, or in any special one upon the metres of the classical languages, it is useful.

As its origin is in a word meaning to cut, anything to which it applies should be divided. Now in the penthemimer and hephthemimer *cesuras* of the Greek iambic trimeter, the metre which gives us the best examples, the thing which is divided is a foot, i.e. the third or fourth, divided between two words.]

As the *cesura*, or necessity for dividing certain measures between certain words, arises out of the structure of language, it only occurs in tongues where there is a notable absence of words accented on the last syllable. Consequently there is no *cesura* in English. — Dr. E. G. Latham, *English Language*, ii. 502.

Cesural. adj. Constituted by a cesura, in the sense of pause: (for the sense to which the editor would limit it see above).

The *cesural* place in heroic verse of ten syllables is for the most part at the end of the second foot. The *cesural* pause is most natural when it coincides with the proper stops or points that distinguish the sense of the period; e.g.,

"Hail, universal Lord! | be bounteous still
To give us only good."

In English verse there are often many *cesural* pauses in one line, e.g.,

"Him first, | him midst, | him last, | and without
end." *Mason, Essays*. (Ord MS.)

There are two kinds of pauses that belong to the music of verse. One is the pause at the end of the line; and the other, the *cesural* pause in the middle of it. — *Blair, Lectures*, ii. 130. (Ord MS.)

Césure. s. [?] In the following extract, *cesura*, as a pause at the end of a line.

Other *cesure*. *B. Jonson, Underwoods*.

Cetacea. s. [Lat.] In Zoology. Class of mammals (of which the *whale* is the type) with the general character of fishes.

The *Cetacea*, in fact, have so much the external form of fishes, that ordinary observers would not hesitate to consider them as such. It is remarkable, however, that the tail in these animals is always horizontal, while in fishes it is vertical: the present group, moreover, has warm and red blood, ears with small but external openings, and mammae for the purpose of suckling their offspring. These, with many other details of their anatomy, distinctly separate them from the true fishes. . . . The natural divisions of the *Cetacea*, for the reasons above assigned, remain undetermined: but they may be artificially arranged under the denomination of, 1. Porpoises or dolphins; 2. Whales; and, 3. Laman-tins or sea-cows. — *Swainson, Natural History, Quadrupeds*, §§ 185, 186.

Cetacean. s. Animal of the whale kind. One of the most remarkable animals on the coast is the dugong, a phytophagous cetacean. — *Sir J. E. Tennent, Ceylon*, ix. 7.

Cetaceous. adj. [Lat. *cete* = whale.] Of the whale kind.

Such fishes as have lungs or respiration, are not without the wezzon, as whales and *cetaceous* animals. — *Sir T. Browne, Vulgar Errors*.

He hath created variety of these *cetaceous* fishes, which converse chiefly in the northern seas, whose whole body being encompassed round with a copious fat or blubber, it is enabled to abide the greatest cold of the sea-water. — *Ray, Wisdom of God manifested in the Works of the Creation*.

The dolphins, like the whales and other typical *cetaceous* animals, are distinguished by those singular perforations called spiracles. As they swallow,

with their prey, an immense quantity of water, some mode was necessary to enable them to get rid of it. The water passes into the nostrils by means of a peculiar disposition of the palate, and is accumulated in a sac placed at the external orifice of the external cavity of the nose, from which it is expelled with violence, by the compression of powerful muscles, through a very narrow aperture situated at the top of the head. — *Swainson, Natural History, Quadrupeds*, § 187.

Ceterach. s. [?] Scale-fern (*Ceterach officinarum*).

Ceterach groweth upon old stone walls and rocks, in dark and shadowy places throughout the west part of England; especially upon the stone walls by Bristowe, as you go to St. Vincent's Rock, and likewise about Bath, Wells, and Salisbury, where I have seen great plenty thereof. . . . Spleene-wort, or Milt-waste, is called in Greek *καταλινον*, in Latin likewise *Asplenium*, and also *Scolopendria*; of Galga Mula herba, in shops *Ceterach*. . . in English, Spleenwort, Miltwaste, Scaleferne, and Stoneferne. — *Gerarde, Herbal*, p. 1141: ed. 1633.

Chalcédony. *s.* [see extract.] So called variety of quartz.

The fundamental terms of a system of nomenclature may be conveniently borrowed from casual or arbitrary circumstances. For instance, the names of plants, of minerals, and of geological strata, may be taken from the places where they occur conspicuously or in a distinct form; as *Parietaria*, *Parnassia*, *Chalcédony*, *Arragonite*, *Silurian* system, *Purbeck limestone*. These names may be considered as at first supplying standards of reference; for in order to ascertain whether any rock be *Purbeck limestone*, we might compare it with the rocks in the Isle of Purbeck. But this reference to a local standard is of authority only till the place of the object in the system, and its distinctive marks, are ascertained. It would not vitiate the above names if it were found that the *Parnassia* does not grow on *Parnassus*; that *Chalcédony* is not found in *Chalcédon*; or even that *Arragonite* no longer occurs in

Arragon; for it is now firmly established as a mineral species. Even in geology such a reference is arbitrary, and may be superseded, or at least modified, by a more systematic determination. Alpine limestone is no longer accepted as a satisfactory designation of a rock, now that we know the limestone of the Alps to be of various ages.—*Whewell, Novum Organon renovatum*, p. 304.

Paine's outer door happened to be open, turned back on the wall; the turnkey marked it on the side next him, and hurried on; another turnkey came, and shut it; no *chalk-mark* now visible, the Fournée went without Paine. Paine's life lay not there.—*Carlyle, French Revolution*, pt. iii. b. vi. ch. viii.

So from *dominio*, *domnio*, *donio*, English, *duncheon*; from *sonnium*, French *sonne*. Provencal, *calonja*, dispute; *calumpniamen*, contestation, difficulty; *calonjar*, to dispute, refuse. The *sacramentum de calumnia* was an oath on the part of the person bringing an action of the justice of his ground of action, and as this was the beginning of the suit it is probably from thence that *calumpniari*

in the sense of bringing an action arose. 'Can hom ven al plaiz et fa sagramen de calumpnia.' 'Sagrament de calumpnia o de veritat per la una part e per l'autra.'—*Wedgwood, Dictionary of English Etymology*.]

To meet my arms, was worth the conquering. *Dryden*.

The Roman Catholic priest who had just taken possession of the globe house and the *chancel*, the Roman Catholic squire who had just been carried back on the shoulders of the shouting tenantry into the hall of his fathers, would be driven forth to live on such aims as peasants, themselves oppressed and miserable, could spare.—*Macaulay, History of England*, ch. xiv.

Chancellor. *s.* [Lat. *cancellarius*; Fr. *chancelier*.]

1. In Civil Law. Highest judge in the kingdom.

Cancellarius, at the first, signified the registers or actuaries in court; 'grapharios, scilicet qui conscribendis et excipiendis iudicium actis dant operam.' But this name is greatly advanced, and not only in other kingdoms but in this, is given to him that is the chief judge in causes of property; for the *Chancellor* hath power to moderate and temper the written law, and subjecteth himself only to the law of nature and conscience.—*Cowell*.

Turn out, you rogue, how like a beast you lie:
Go, buckle to the law: Is this an hour
To stretch your limbs? you'll ne'er be *Chancellor*. *Dryden*.

The mercy, and the pardon, and the huge moderation of that court [the Gospel], though it hath mollified the strict law into never so much *Chancery*, will not proceed further, and mollify obedience into libertinism.—*Hammond, Sermons*, vi.

Used adjectively, or as the first element in a compound.

His serenity, his modesty, his self-command, proof even against the most sudden surprise of passion, his self-respect, which forced the proudest grandees of the kingdom to respect him, his urbanity, which won the hearts of the youngest lawyers of the *Chancery* Bar, gained for him many private friends and admirers among the most respectable members of the opposition.—*Macaulay, History of England*, ch. xxv.

Another kind of fine was that which gave what we should now call a *Chancery* title to lands.—*Pearson, The early and middle Ages of England*, ch. xxxiii.

And truly there were very manifold traces of hasty and temporary arrangement; new carpets and old hangings; old paint, new gilding; battalions of odd French chairs, squadrons of queer English tables; and large tasteless lamps and tawdry chandeliers, evidently true cockneys, and only taking the air by way of change.—*Disraeli the younger, Coningsby*, b. iv. ch. ix.

Used adjectivally.

It is the solitary taper and the book that generates a faith in these terrors: a ghost by chandellier light, and in good company, deceives no spectators,—a ghost that can be measured by the eye, and his human dimensions made out at leisure.—*Lamb, Essays of Elia, On the Tragedies of Shakespear.*

Chandler. *s.* One who makes candles or sells them; general term for a dealer; (often the second element in a compound, as cornchandler, shipchandler, &c.).

Chandry. *s.* Place where the candles are kept.

To mistake six torches from the chandry, and give them one.—*B. Jonson, Masques.*

Chanfrin. *s.* [Fr. *chanfrein*.] See extract.

Chanfrin, in the mane, is the forepart of a horse's head, extending from under the ears along the interval between the eyebrows and the nose.—*Rees, Cyclopaedia*, in voce.

The earlier meaning, however, of the word was the covering of the part in question, or the stall on which, in fully caparisoned horses, the barb was placed.

Extended by several zoologists to the corresponding part in other animals, it is in a fair way of becoming a definite anatomical term under the form *chaffron*. In the following extract it applies to an animal akin to the antelopes on one side, and to the oxen on the other, the Catoblepas Gnu.

The head is large and square, with horns in both sexes; . . . the muzzle is very broad; the nostrils bovine, and provided internally with a triangular valve which opens and closes at pleasure. There are glands on the cheek, a mane on the neck, and a considerable beard upon the throat; the dewlap is small; there is a ridge of hair on the chaffron, and bristles round the eyes and upon the lips. The body and tail are those of a horse, and the legs are like those of a stag. A more singular compound of characters cannot well be exhibited; and they conspire to produce an animal of a most extraordinary aspect.—*Swainson, Natural History, Quadrupeds*, § 285.

Change. *v. a.* [Fr. *changer*; Lat. *cambia*.]

[*Chapel*. Commonly derived from *capella*, the *cape* or little cloak of St. Martin, which was preserved in the palace of the kings of the Franks, and used as the most binding relic on which an oath could be taken. . . . Hence it is supposed the name of *capella* was given to the apartment of the palace in which the relics of the saints were kept, and thence extended to similar repositories where priests were commonly appointed to celebrate divine services. . . . But we have no occasion to resort to so hypothetical a derivation. The canopy or covering of an altar where mass was celebrated was called *capella*, a hood. Medieval Latin, *capellare*, tegere, decken, bedecken; *capella*, ein himeltz, eghymels (eucharistie, &c.), the canopy over the sacred elements; eine kleine Kirche. And it can hardly be doubted that the name of the canopy was extended to the recess in a church in which an altar was placed, forming the *capella* or *chapel* of the saint to whom the altar was dedicated.—*Wedgwood, Dictionary of English Etymology*.]

Excess, either with an apoplexy, knocks a man on the head, or, with a fever, like fire in a strongwater shop, burns him down the ground; or if it flames not out, *charks* him to a coal.—*Grew, Cosmologia Sacra*.

For *charlatans* can do no good, Until they're mounted in a crowd.

I should like to ask... how they explain the very existence of those dexterous cheats, those superior *charlatans*, the legislators and philosophers, who have known how to play so well upon the peacock-like vanity and follies of their fellow-mortals.—*Cole-ridge, Table Talk*.

Owing to these causes, medical practice always has been the favourite field of *charlatans*, and their success is proportionate to the credulity and ignorance of the public.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iii.

The *charlatan*, on the other hand, is almost invariably actuated by the love of gain. His purpose is to dupe the world, and to extract money from the pockets of his dupes. Paracelsus and Mesmer afford an example on a large scale; a village mountebank on a small one.—*Ibid.* ch. iii.

A further assistance in the selection of guides to opinion may be derived from a consideration of the marks of imposture or *charlatanism*, in respect both to science and practice. If such marks can be found, they will afford an additional means of distinguishing mock sciences from true ones—the *charlatan* from the true philosopher or sound practitioner.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iii.

Genuine science is in general simple, precise, perspicuous, devoid of ornament, dry and unattractive, modest in its pretensions, free from all undue contrivances for exciting applause or obtaining attention. *Charlatanism*, on the other hand, is tricky, obtrusive, full of display—now wearing the mask of impassioned enthusiasm—now assuming an aspect of solemn gravity, vague and mystical in its language, sometimes propounding elaborate schemes of new classification and nomenclature, dealing in vast promises and undertakings.—*Ibid.* ch. iii.

lofty, and, when lighted up, appear very striking.

walk, or sit and *chat* together, just as they are disposed.—*Smollett, Expedition of Humphrey Clinker.*

Shakespeare, Tempest, ii. 1.

Constitutional History of England, ch. i.

- [**Châtels.** *cattle.* French, *chattel*, Old French, *chaptel*,

a piece of moveable property, from Latin, *capitale*,

whence *capitale*, *catalum*, the principal sum in a

loan, as distinguished from the interest due upon it.

Semper renovabatur carter et usura que excrevit

vertebatur in *catalum*. (Cronica Jocelini. Camden

Society.) Then, in the same way as we speak at the present day of a man of large capital for a man of large possessions, *cattalum* came to be used in the sense of goods in general, with the exception of land, and was specially applied to cattle as the principal wealth of the country in an early stage of society.

'Juxta facultates suas et juxta catalla sua.' (Laws of Edward the Confessor.) 'Cum decimis omnium terrarum ac honorum aliorum sive cattalorum.' (Ingulphus.)

'Rustici curtillum debet esse clausum estate simul et hieme. Si disclausum sit et introeat alicujus vicini sui capitale per suum apertum.' (Brompton in Duc.)

It should be observed that there is the same double meaning in Anglo-Saxon, *ceap*, goods, cattle, which is the word in the laws of Ina translated *capitale* in the foregoing passage; and this may perhaps be the reason why the Latin equivalent *capitale* was applied to beasts of the farm with us, while it never acquired that meaning in France.—Wedgwood, *Dictionary of English Etymology*.]

Chatter. *v. n.* [see last extract.]

(In the text of Yarell's British Birds the word *chatterer* is not to be found, appearing only in the list of synonyms, and the same is the case in Bewick. As the bird itself is only an occasional visitor, the name can scarcely be considered vernacular, but rather the translation of the specific name *garrulus*.)

Chattering. *part. adj.* Jabbering; prating.

Stood Theodore surpris'd in deadly fright, With chattering teeth, and bristling hair upright. *Dryden*.

Chawm. *s.* [word for word, *chasm*.—such is Richardson's view; and, if right, it is likely that the spelling *chasm* misled some early writer, who took it for what it really looks like, a word of Anglo-Norman origin.] Fissure; opening.

There be lands also that put forth after another manner, and all at once show on a sodaine in some sea; as if nature cried quittance with herself, and made even paying one for another; namely by giving againe that in one place which those *chawmes* and gaping gulfs took away in another.—*Holland, Translation of Pliny*, ii. 86.

The original for both *chawmes* and gaping gulfs is *hiatus*.

The following are, doubtless, errors of either spelling or pronunciation, or of both: Fendu.—Full of crannies, full of chawns.—*Cotgrave*.

The earth at first, you must suppose, was a very paradise; but in process of time, the sun, with its mighty heat, so parched and filled it with chops and chawns, which descended very far into the earth, and prepared it for a rupture.—*Bishop Craft, On Burnet's Theory of the Earth*, p. 113: 1685.

With better.

It is many a man's case to tire himself out with hunting after that abroad, which he carries about him all the while, and may have it better cheap at home.—*Sir R. L'Estrange*.

[The modern sense of low in price is an ellipse for good cheap, equivalent to French, *bon marché*. . . . It shows satisfactorily that the modern sense of buying is not the original force of the word, which is used in the sense of bargaining, agreeing upon, exchanging, giving or taking in exchange, and hence either buying or selling. 'Hvert kaup skulu vid til gifa theim heilaga manne.' What shall we then give in exchange, what return shall we make to the holy man. (Tobit, c. 12.) 'Ek villdi kaup skipinu vid ykurr brædur.' I will exchange ships with you two brothers. 'Köpa jörd i jörd,' to exchange farm for farm. Thus we are brought to the notion of changing, expressed by the colloquial English, *chop*; to chop and change, to swap goods.—*Wedgwood, Dictionary of English Etymology*.]

to make another move unless it were a *checkmate*.—
Disraeli the younger, Coningsby, ch. v.

Check-mate. v. a. At Chess. Place the
adversary's king in irretrievable check;
(*figuratively*) finish.

Our days be datyd
To be *checkmated*

With drawtys of death. *Skelton, Poems, p. 258.*

Paul de Foix, one day at the end of May, found
her in her room playing at chess.—*Madam*, he said
to her, 'you have before you the game of life. You
lose a small pawn; it seems a small matter; but
with the pawn you lose the game.'—'I see your
meaning,' she answered; 'Lord Darley is but a
pawn; but, unless I look to it, I shall be *check-
mated*.'—*Froude, History of England, Reign of
Elizabeth, ch. viii.*

Having extracted a disavowal from the majority
of the Bench, Elizabeth was able to shield her ob-
jections behind their indifference; she had *check-
mated* them, and the obnoxious measure disappeared.
—*Ibid. ch. x.*

Chécker. *v. a.* [for remarks on the spelling see Checkers: see also notice at end of Checkroll.] Variegated or diversified with alternate colours, or with darker and brighter parts, in the manner of a chess-board.

Checking the eastern clouds with streaks of light.
Shakespeare, Romeo and Juliet, ii. 3.

In our present condition, which is a middle state,
our minds are, as it were, *chequered* with truth and falsehood.—*Addison.*

Is *chequer'd* with the northern light.

Drayton.

In the chess-board, the use of each chess-man is determined only within that checker'd piece of wood.—*Locke.*

2. With life, career, &c. Crossed with good and bad fortune: (perhaps from the notion of black (*unlucky*) and white (*lucky*) days).

The rough corporal usage which he had now, for the first time, undergone, seems to have discomposed him more than any other event of his checker'd life.—*Macaulay, History of England, ch. x.*

For this disinterestedness he was repaid by the enthusiastic applause of his followers, by the enforced respect of his opponents, and by the confidence which, through all the vicissitudes of a checker'd and at length disastrous career, the great body of Englishmen reposed in his public spirit and in his personal integrity.—*Ibid. ch. xxiv.*

Chéckerman. *s.* One who checks or check-mates, (*figuratively*) cuts short or cuts off, anyone. *Rare.*

For Death hath been a checker-man
Not many years ago;
And he is such a one as can
Bestow his checking so.
Death's Dance, an old Ballad. (Nares by H. and W.)

Chéckers. *s.* [Generally, probably always, in the plural; inasmuch as at least two areas of different colours are implied by the term.

The word is a well-known name as the sign of a public-house; once more frequent than now, and denoted by a checker'd board, sometimes hanging out as a sign, sometimes painted on the doorpost or shutters.

One derivation is supplied by the extract from Brand, which deduces it from the table itself. If, however, we lay much stress on the opportunity afforded for changing money, it may be more immediately connected with Exchequer.

In any case it is a proper, rather than a common, name. Derived from Exchequer, it would be a proper name derived from a proper name. This origin being in the present case doubtful, and the use of the *qu* in spelling being limited to those words from which it is considered impracticable to eject it (see Chequer), the entry stands as the reader finds it here; and it does the same in Checkroll, where the likelihood of a derivation from Exchequer is greater.

The reason why the use of *qu* is limited, rather than extended, is connected with the facts indicated in the notices of Alcaid, Cæe, and Kay, viz. the practical inconveniences, as well as the theoretical inaccuracies, which arise from the principle improperly introduced into English from languages derived from the Latin, of avoiding the use of *k* wherever, by any possible orthographical expedient based upon the application of *c* or *q*, it can be dispensed with.

In Check, &c., this adoption of *k* is unavoidable, on account of words like Checking, Checker, &c. To write *chec-er* would render the word liable to be sounded *ches-er*. When this is the case, the only alternative is that between spelling Check and Cheque.

That the former is prevailing over the latter in every language where *k* exists at all as a letter is apparent; where *k*, however, as in the French, is not admitted, there is no alternative. As an instance of the extent to which the orthographical expedients adopted for the sake of supporting this eschewal of *k*, on the strength of its being extraneous to the later Latin alphabet, have defeated their own end, the Spanish spelling of the word Chimera may serve. It is spelt *Quimera*. This is because, whilst the sound of the *k* must be retained, *ci* would run the chance of being sounded something between *tsee* and *thee*, and *chi* like *chee* in cheer.

For a like improper use of *qu*, see Choir, Chorister, Quire, and Quirister. It is submitted that a principle which leads to instances like these should be limited rather than extended.]

Device consisting of alternate black and white squares used as a tavern sign.

The Chequers, at this time a common sign of a public house, was originally intended, I should suppose, for a kind of draught-board, called tables, and shewed that there that game might be played.—*Brand, Observations on Popular Antiquities.* Story! God bless you, I have none to tell, Sir, Only last night, a-drinking at the Chequers, This poor old hat and breeches, as you see, were

Torn in a scuffle. *Canning.*

Chéckerwork. *s.* Work consisting in a pattern composed of squares varied alternately in colours or material.

Nets of checker-work and wreaths of chain-work for the chapters which were upon the top of the pillars.—*1 Kings, vii. 17.*

In that variety which God hath chosen to set forth his noblest creatures, which are after his own image, even mankind, in a kind of checker-work of some handsome and others unhandsome, some pallid and others ruddy, every one, I think, ought to content themselves with that colour and complexion, as well as feature, which God hath given them; not only in order to their particular subsisting, but as to the general symmetry of his works.—*Jeremy Taylor, Artificial Handsomeness, p. 35.*

There is in divine dispensations a kind of checker-work of black and white days taking place by turns.—*Spencer, Discourse concerning Prodiges, p. 306.*

How strange a checker-work of Providence is the life of man! and by what secret different springs are the affections hurried about, as different circumstances present!—*De Foe, Life and Adventures of Robinson Crusoe.*

Chéckless. *adj.* Uncontrolled; violent.

The hollow murmur of the checkless winds
Shall groan again. *Marston, The Malcontent.*

Chéckroll. *s.* [see Checkers.] Roll, or book, containing the names of, such as are attendants on, and in pay of, great personages, as their household servants.

Not daring to extend this law further than to the king's servants in checkroll, lest it should have been too harsh to the gentlemen of the kingdom.—*Bacon, History of the Reign of Henry VII.*

[All the forms in Check are treated by etymologists as etymological congeners, all being equally derivatives from the

word signifying check in chess. For an idea so common as that suggested by the word *cheek* = stop, a term derived from a sedentary game is scarcely what we expect a priori. This, however, is all that can be said against the etymology.

The game, then, gives name to two series of words; one taken from the play itself, and signifying stoppage, &c.; the other from the board, and signifying alternation of differently coloured squares.

As the immediate origin, however, of the English word is from the French, the question under notice is one that touches the French rather than the English lexicographer.]

[*Cheer*.—Provincial Spanish, *cara*, Old French, *chiere*, Italian, *cera*, the countenance; French, *chère*, the face, visage, countenance, favour, look, aspect of a man. *Faire bonne chère*, to entertain kindly, welcome heartily, make good cheer unto; *faire mauvaise chère*, to frown, lower, hold down the head; *belle chère et cœur arrière*, a willing look and unwilling heart. (Cotgrave.) Then as a kind reception is naturally joined with liberal entertainment, *faire bonne or mauvaise chère* acquired the signification of good living or the reverse, and hence the English *cheer* in the sense of victuals, entertainment. The Latin *cara* is used in the sense of face by a writer of the 6th century. *Postquam venere verendam Cæsaris ante caram*. (Diaz.)—Wedgwood, *Dictionary of Etymology*.]

And draws the aromatick souls of flow'rs. *Pope.*

Chémic. s. Chemist. Obsolete, or perhaps originally used in disparagement.

He is turned *chymick*, sirrah; it seems so by his talk.—Here's old turning; these *chymicks*, seeking to turn lead into gold, turn away all their own silver.—*Brewster, Lingua*, iv. 1.

Chémical. s. Drug; chemical preparation. See Drug.

Chémical. adj. Same as Chémic, and now the commoner term.

The medicines are ranged in boxes, according to their natures, whether *chymical* or Galenical preparations.—*Watts.*

Most of the substances belonging to our globe are constantly undergoing alterations in sensible qualities; and one variety of matter becomes, as it were, transmitted into another. The object of *chemical*

philosophy is to ascertain the causes of all such phenomena, whether natural or artificial, and to discover the laws by which they are governed.—*Sir H. Davy*.

In chemical processes, opposites tend to unite, and to neutralize each other by their union. Thus an acid or an alkali combine with vehemence, and form a compound, a neutral salt, which is neither acid nor alkaline. This conception of contrariety and mutual neutralization, involves the Idea of Polarity. In the conception as entertained by the earlier chemists, the idea enters very obscurely; but in the attempts which have more recently been made to connect this relation (of acid and base) with other relations, the chemical elements have been conceived as composed of particles which possess poles, like poles repelling, and unlike attracting each other. . . . Mr. Faraday, who has been led by his researches to a conviction of the polar nature of the forces of chemical affinity, has expressed their character in a more general manner, and without any of the machinery of particles indued with poles. According to his view, chemical synthesis and analysis must always be conceived as taking place in virtue of equal and opposite forces, by which particles are united or separated.—*Whewell, History of Scientific Ideas*, b. v. ch. i. § 7.

Chemically, adv. In a chemical manner.

Burgavius specifies a lamp to be made of man's blood, lucerna vitæ et mortis index, so he terms it; which *chymically* prepared 40 days, and afterward kept in a glass, shall shew all the accidents of his life.—*Burton, Anatomy of Melancholy*, p. 281.

He brews his tears that studies to lament.
Versè chymically weeps.

The close connexion between the Chemical Affinity and the Crystalline Attraction of elements cannot be overlooked. Bodies never crystallize but when their elements combine *chymically*; and solid bodies which combine, when they do it most completely and exactly, also crystallize. . . . Both chemical and crystalline forces are polar, as we stated in the last chapter; but the polarity in the two cases is of a different kind. The polarity of chemical forces is then put in the most distinct form, when it is identified with electrical polarity; the polarity of the particles of crystals has reference to their geometrical form.—*Whewell, History of Scientific Ideas*, b. v. ch. ii. § 9.

Chémist. s. One who practises Chemistry: (in the infancy of Chemistry applied to alchemists; and, even when the science was in a more advanced stage, used as a term of disparagement).

The starving *chymist*, in his golden views
Supremely blest.
Pope, Essay on Man.
(See also last extract under Chemical, *adj.*)

Chemistical. adj. Chemical. *Obsolete.*

Paracelsus, and his *chymistical* followers, are so many Promethei, will fetch fire from heaven, will cure all manner of diseases, &c.—*Burton, Anatomy of Melancholy*, p. 377.

Chémistry. s. [for spelling and derivation, see the extracts and remarks at the end of them.] Scientific study of the constitution of substances in respect to their elements, and of the forces by which they are held together.

Chymistry [is] derived by some from *χῆμος*, juice, or *χῆμα*, to melt; by others from an oriental word, *kema*, black. According to the supposed etymology, it is written with *y* or *e*. Some deduce it from the name of a person eminently skilled in the science, whose name, however, is written both *Χῆμος* and *Χῆμης*. Others consider *Chémi*, the Coptick name of Egypt, which was the cradle of this science, as the original.—*Johnson, Dictionary*, in voce.

It is derived originally from *chemia*, and that word from *Cham*. . . . The Egyptians were deeply skilled in astronomy, and geometry; also in *chymistry*, and physick.—*Bryant, Ancient Mythology*, iii. 299.

[The extract from Davy under Chemical, which, as an addition of Todd's, represents a newer orthography than that of Johnson himself, is the only one in which the word is spelt with an *e*, though Chemistry in the extract from Cheyne placed under that word gives an approximation to the present spelling. In respect to this it is scarcely necessary to say that *e* is all but universal.

The principle that condemns *y* is stated under Alchemy. To apply this, it is not necessary to suppose that the derivation from the Greek *χῆμος* has actually been disproved. It is sufficient for it to be doubtful.

ful; the rule being that *y* is only to be used when it is *certain* that it represents a Greek upsilon. How far the origin of the word was unknown in Johnson's time may be seen from the extracts. Nor is it absolutely beyond the range of discussion even at the present time; the most that can be said in favour of its derivation from the native name of Egypt being that the early history of the science favours it.

The pronunciation follows, for the most part, the old rather than the new spelling; but, as the word is one which belongs chiefly to the reading classes, the habit of sounding the *e*, which has certainly set in, may eventually prevail.

Chemistry, as a science, has to a great extent a language of its own; formed artificially, and upon certain principles; definite, though liable to modification. The fact of the following extracts (which also exhibit the spelling with *e*) being illustrative of these excuses their length.]

The language of Chemistry was already, as we have seen, tending to assume a systematic character, even under the reign of the phlogiston theory. But when oxygen succeeded to the throne . . . the new nomenclature was constructed upon a principle hitherto hardly applied in science, but eminently commodious and fertile; namely, the principle of indicating a modification of relations of elements, by a change in the termination of the word. Thus the new chemical school spoke of sulphuric and sulphurous acids; of sulphates and sulphites of bases; and of sulphurets of metals: and in like manner, of phosphoric and phosphorous acids; of phosphates, phosphites, phosphurets. In this manner a nomenclature was produced, in which the very name of a substance indicated at once its constitution and place in the system. The introduction of this chemical language can never cease to be considered one of the most important steps ever made in the improvement of technical terms; and as a signal instance of the advantages which may result from artifices apparently trivial, if employed in a manner conformable to the laws of phenomena, and systematically pursued.—*Whewell, Novum Organon renovatum*, b. iv. aph. ii. § 8.

In Chemistry, new substances have of late had names assigned them from Greek roots, as *Iodine*, from its violet colour, *Chlorine* from its green colour. In like manner fluorine has by the French chemists been called *Phthor*, from its destructive properties. So the new metals, *Chrome*, *Rhodium*, *Iridium*, *Osmium*, had names of Greek derivation descriptive of their properties. Some such terms, however, were borrowed from localities, as *Strontia*, *Yttria*, the names of new earths. Others have a mixed origin, as *Pyrogætic*, *Pyrocætic*, and *Pyroligneous Spirit*. In some cases the derivation has been extravagantly capricious. Thus in the process for making Pyrogælic Acid, a certain substance is left behind, from which M. Braconnot extracted an acid which he called *Ellagic Acid*, framing the root of the name by reading the word *Galle* backwards.—*Ibid.* b. iv. aph. xx. § 7.

Chémý. s. Chemistry. *Obsolete.*

It is past all doubt in philosophy, and in philosophical *chemy*, that animal substances of most kinds possess, in a much greater proportion, salts and oils than vegetables.—*Cheyne, Philosophical Principles of Natural Religion*, disc. 2. (Ord MS.)

Chéquer. s. Exchequer.

Tribute that the swain floods render
Into her *chequer*.

W. Brown, Britannia's Pastorals.

A reference to the extracts under Checkerwork will show that the spelling of some at least of the derivatives of Check is uncertain. The present edition goes on the principle of limiting the use of the form in *q*. The word *exchequer*, however, is one from which few would venture to exclude it: indeed it is a proper, rather than a common, name. To this, then, and its undoubted abbreviations, the present spelling is restricted.

Chequer-chamber. s. Exchequer chamber.

It was resolved by all the judges in the *Chequer-chamber* that the possession of the crown takes away all defects; yet for honour's sake all records of the attainer were taken off the file.—*Baker, Chronicle*, A.D. 1485. (Rich.)

Chequer-roll. s. [see Checkroll and Checkers.] Exchequer-roll.

The king's servants within his *chequer-roll*.

Bacon, Charge.

Whenever Buckingham doth turn his hate
Upon your grace, and not with dutious love
Doth *cherish* you and yours, God punish me
With hate in those where I expect most love.

Shakespeare, Richard III. ii. 1.

What doth *cherish* weeds but gentle air?

Id., Henry VI. Part III. ii. 8.
eth and *cherisheth* it, even as the Lord the church.
—*Ephesians*, v. 29.

Magistrates have always thought themselves concerned to *cherish* religion, and to maintain in the minds of men the belief of God and another life.—*Archbishop Tillotson*.

But old god Saturn, which doth all devour,
Doth *cherish* her, and still augments her might.
Sir J. Davies.

Chérisher. s. Encourager; supporter.

They were both great *cherishers* of scholars and divines.—*Sir H. Wotton, Parallel of Lords Buckingham and Essex*.

Chérishment. s. Encouragement; support; comfort. *Obsolete.*

The one lives, her age's ornament,
That with rich bounty and dear *cherishment*,
Supports the praise of noble poesie.

Spenser, Tears of Muses.

Cheroót. s. [?] Leaf tobacco rolled in a cylindrical form for the convenience of smokers: (originally imported from Havana and the East Indies).

Cigars and *sheroots* (the latter distinguished by their truncated extremities, while cigars have a pointed extremity called the curl or twist) are extensively manufactured in London.—*Pereira, Elements of Materia Medica, Tobacco*.

Chéry. s. [Fr. *cerise*; Lat. *cerasus*.—see extract under Cherry-tree.]

July I would have drawn in a jacket of light yellow eating *cherries*, with his face and bosom sunburnt.—*Peacham*.

Chéry. adj. Resembling a cherry in colour, fullness, or both.

Shore's wife hath a pretty foot,
A *cherry* lip, a passing pleasing tongue.

Shakespeare, Richard III. i. 1.

Cherry-bounce. s. Cherry-brandy under a false name, coined to avoid the notion of its being a spirit, and, as such, liable to a duty for its sale.

Plethora—yea, of *cherry-bounce* quantum suff.—and old Oporto, a couple of magnums,—that's my physic! A short life and a merry one, ha! ha! Ugh! ugh!—*Morton, Secrets worth knowing*, ii. 1.

With a play on the word; bounce = exaggeration.

He rang the bell, and ordered the servant—first giving him a key and a caution—to bring forth sundry bottles of the boasted beverage; for let it always be remembered, that Hull's cases of what might be thought *bounce* were all as genuine as this of the *cherry-bounce*—he had all the things he talked of.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. xi.

Cherry-brandy. s. [two words rather than a compound.] Brandy flavoured with (morello) cherries.

I, for one, prefer rum shrub or *cherry-brandy* to all the garuses, and mallyskinos, and curasores in the world.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. xi.

Cherry-cheeked. adj. Having ruddy cheeks.

Inclin'd to red, and of a sprightly air.

Sir B. Fanshawe, Translation of Guarini's Pastor Fido, p. 43.

I warrant them *cherry-cheek'd* country girls.—*Congreve*.

CHER

Cherrycoloured. *adj.* [two words rather than a compound.] Of the colour of a cherry.

She wore one of her own round-ear'd caps, and over it a little straw hat, lined with cherry-colour'd silk, and tied with a cherry-colour'd ribbon.—*Fielding, Adventures of Joseph Andrews.*

Cherry-pit. *s.* Child's play, consisting in the pitching of cherrystones into a small hole.

What! man, 'tis not for gravity to play at cherry-pit.—*Shakespeare, Twelfth Night*, iii. 4.

Cherrystone. *s.* Hard case of the kernel of the cherry: (no stone, but a tissue of hard woody fibre).

Some devils ask but the parings of one's nail, A rush, a hair, a drop of blood, a pin, A nut, a cherry-stone; But she, more covetous, would have a chain.

Shakespeare, Comedy of Errors, iv. 3. A little spark of life, which, in its first appearance, might be inclosed in the hollow of a cherry stone.—*Sir M. Hale.*

Cherrytree. *s.* Tree (*Prunus Cerasus*) bearing cherries.

This hero [Lucullus], who conquered the East, has left his more extended celebrity to the transplantation of cherries (which he first brought into Europe) and the nomenclature of some very good dishes;—and I am not sure that (barring indigestion) he has not done more service to mankind by his cookery than by his conquests. A cherry-tree may weigh against a bloody laurel; besides, he has contrived to earn celebrity from both.—*Byron, Don Juan*, xv. note 4.

Chersonese. *s.* [Gr. χερσόνησος (from χερς, ἥσος) = land-island.] Block of land projecting into the sea, like Attica, the Thracian Chersonese, and other similar areas, too large for Capes and scarcely narrow enough at the neck to be called Peninsulas.

Restricted to such, and signifying a Peninsula without an Isthmus, the word may usefully be admitted into the language of modern geography. Holstein, Schleswig, and Jutland are often called the Cimbric Chersonese; and that, as far as the latter term goes, both accurately and conveniently.

The sea so circles there that it becomes a chersonese.—*Sir T. Herbert, Relation of some Years' Travels into Africa and the Great Asia*, p. 35.

From India and the Golden Chersonese. *Milton, Paradise Regained*, iv. 74.

Chert. *s.* [?] Kind of flint differing from the purer sorts in being less crystalline, and having calcareous elements.

Flint is most commonly found in form of nodules; but 'tis sometimes found in thin strata, when 'tis called chert.—*Woodward.* Roadstones, it will be remembered, have to resist not only friction but pressure, and they require, therefore, to be hard and tough. For this reason, chert, though not harder, being tougher than flint, is a far better road material.—*Ansted, Geology*, ii. 445.

Cherty. *adj.* Flinty.

The clay is found near the town, over the cherty stratum.—*Pennant.*

Chérub. *s.* [Hebrew, in which language the plural is *cherubim*; *cherubs* being the English form, and *cherubims* an incorrect one arising out of a mixture of the two.] Being belonging to the Hebrew angelology, of doubtful form, but represented by sculptors under that of the head of a child supported by the wings of a bird. See last extract.

The roof o' the chamber With golden cherubims is fretted.

Shakespeare, Cymbeline, ii. 4.

Heaven's cherubim hors'd, Upon the sightless coursers of the air, Shall blow the horrid deed in every eye, That tears shall drown the wind. *Id., Macbeth*, i. 7.

To Thee cherubim and seraphim continually do cry.—*Book of Common Prayer, Te Deum.* Thou sitt'st between the cherubs bright, Between their wings outspread.

Milton, Psalm lxxx.

CHES

Some cherub finishes what you begun, And to a miracle improves a tune. *Prior.* His business so augmented of late years, That he was forced, against his will no doubt, (Just like those cherubs, earthly ministers,) For some resource to turn himself about.

Byron, Vision of Judgment. Moses has left us in the dark as to the form of these cherubims. The Jews suppose them to have been in the shape of young naked men, covered for the sake of decency with some of their wings. . . . But it is certain that the prophet Ezekiel represents them quite otherwise, and speaks of the face of a cherub as synonymous with that of an ox or calf; and in the Revelation they are called ζῶα, beasts.—*Hook, Church Dictionary*, in voce.

Cherubic. *adj.* Relating to a cherub.

Thy words Attentive, and with more delighted ear, Divine instructor! I have heard, that when Cherubick songs by night from neighbouring hills Aerial music send. *Milton, Paradise Lost*, v. 544. And on the east side of the garden place Cherubick watch. *Id.*, xi. 119.

Cherubical. *adj.* Same as Cherubic.

Why did you not call to mind the cherubical angel, which, in the form of a crucifix, spoke to St. Francis?—*Sheldon, Miracles of Antichrist*, p. 162.

A third hymn of great note in the church was the cherubical hymn, or the trisagion, as it was called, because of the thrice repeating, Holy, Holy, Holy Lord God of Hosts.—*Christian Antiquities*, ii. 117.

Cherubin. *adj.* Cherubine (supposing such a word to have been formed on the principle of *divine*); of the character of a cherub; angelical: (or in the extract, if the accent be taken as a test, the Cherubin of the following entry in combination with *look*).

This fell where of thine Hath in her more destruction than thy sword, For all her cherubin look.

Shakespeare, Timon of Athens, iv. 3.

Chérubin. *s.* [probably formed out of *cherubim* for the sake of the rhyme.] Cherub.

O daughter of the rose, whose cheeks unite The differing titles of the red and white . . . Whose face is paradise, but fenc'd from sin; For God in either eye has plac'd a cherubin.

Dryden, To the Duchess of Ormond.

Chérvil. *s.* [see extract.] Name given to certain umbelliferous plants of the genera *Anthriscus* and *Cherophyllum*; the *Anthriscus Cerefolium* (another form of the word), cultivated for salads and soups, being one of them. See *Cicely*.

Chérvil is commonly called in Latin *cerefolium*, and, as divers affirm, *cherophyllum* with o in the second syllable. *Columella* nameth it *cherophyllum*, and it is thought to be so called because it delighteth to grow with many leaves, or rather in that it causeth joy and gladness. In High Dutch, *Kor-felkraut*; in Low Dutch, *Kernell*; in Italian, *Cerefolio*; in French, *Du Cerueil*; in English, *Cheruell* and *Cheruell*.—*Gerarde, Herbal*, p. 1039: ed. 1633.

Chésible. *s.* [N.Fr. *casuble*, *chasuble*; L.Lat. *casubula*, *castubula*, *casibula*, the last being apparently a commoner form in England than on the Continent. Though both *Casuble* and *Chasuble* are to be found, and though the derivation points to them as the more correct forms, the one in current English seems to be that here given.] Kind of cope; short vestment without sleeves worn by the priest at mass.

Hee casula, a cheespyll.—*Promptorium Parvulorum*.

Manyfold kinds of ornaments, asopes, corporasses, chesibles, tunicles, stoles, &c.—*Bale, Discourse on the Revelations*, pt. ii. k. vi. b.

Casula, the chesible, was a garment worn by the priest next under the cope; and is said to have been so called being a kind of cottage (as it were) or little house covering him.—*Burn, Ecclesiastical Law*, *Casula* (to which a reference is made from *Chesible*).

The Roma Subterranea of Bosius gives us designs of the first Christians of both sexes, entirely covered with the chesible, so like a sack that this vast robe turned up over their shoulders when they wished to lift their arms. This gave occasion to the hollows in the side made in the Roman chesibles. It was a kind of cope, open at the sides, worn at mass. The bottom in the priest was round, in the deacon and subdeacon square. It was also called *Planeta*, and fastened with a buckle.—*Fosbroke, Encyclopædia of Antiquities (Costumes)*, *Planeta*.

Chésil. *s.* [German, *kiesel* = flint.] A proper, rather than a common, name; as in

CHES {CHERRYCOLOURED CHEST

the *Chesil* Bank, i. e. bank of shingle, of the Isle of Portland. See *Chessom*.

Chess. *s.* [checks.] Game of skill so called. See also *Checkmate*.

This game the Persian magi did invent, The force of Eastern wisdom to express; From thence to busy Europeans sent, And styl'd by modern Lombards pensive chess.

So have I seen a king on chess, (His rooks and knights withdrawn, His queen and bishops in distress) Shifting about, grow less and less, With here and there a pawn. *Dryden.*

Chessboard. *s.* Board or table on which the game of chess is played. And cards are dealt, and chessboards brought, To ease the pain of coward thought. *Prior.*

Chessman. *s.* Piece used in the game of chess. See *extract*. A company of chessmen, standing on the same squares of the chessboard where we left them: we say, they are all in the same place, or unmoved.—*Locke.*

A side or suit of chessmen consists of six orders, which in the old Oriental game were named—1. Schach, the king; 2. Pherz, the general; 3. Phil, the elephant; 4. Aspensuar, the horseman or cavalier; 5. Ruch, the camel; 6. Beydel or Beydak, the footmen or infantry. In this suit there was no queen, as the introduction of a female into a game representing the stratagems of war would have been contrary to the Oriental ideas of propriety; and long after the introduction of chess into Europe, the second piece, now called the Queen, retained its Eastern name under the name of Fierce, Fierche, or Fierge, even after it had acquired a feminine character. Fierge at length became confounded with the French *Vierge*, a maid; and finally the piece is called *Dame*, a lady, and so becomes thoroughly European both in name and character. . . . Phil, the elephant, is now the *Fol* or *Fou* of the French, and the Bishop of the English; *Aspensuar*, the horseman, is . . . the English knight; *Ruch*, the camel, is the . . . Rook or Castle; and the *Beydel* or *Beydak*, the footmen, are now the French *Pions* and the English *Pawns*.—*Chatto, Facts and Speculations on the Origin and History of Playing Cards*, ch. i.

Chessner. *s.* Chessplayer. *Rare.* Yonder's my game, which, like a politic chessner, I must not seeme to see. *Middleton, Game of Chess*, act iv. (Nares by H. & W.)

Chessom. *s.* Mellow earth.

Thus rendered by Johnson; but the text leaves us free to treat it as an adjective: it is probably a provincial word meaning *loose*, or *friable*. The editor connects this with the local term *chiselly*, i. e. abounding in small stones; the substantive being *chesil*, as in the *Chesil* Bank of the Isle of Portland, and the German *kiesel* = flint. The objections to this are, (1) the fact of the loss of the *l* being unexplained; and (2) that of *chiselly* being scarcely a complimentary term as applied to soil.

The tender *chessom* and mellow earth is the best, being mere mould, between the two extremes of clay and sand; especially if it be not loamy and binding.—*Bacon, Natural and Experimental History*.

Chessplayer. *s.* Player at chess.

Thus like a skilful chessplayer, he draws out his men, and makes his pawns of use to his greater persons.—*Dryden.*

Chest. *s.* [A.S. *cyst*; Lat. *cista*.]

1. Box of wood or other material, in which things are laid up.

He will seek there, on my word: neither press, chest, trunk, well, vault, but he hath an abstract for the remembrance of such places.—*Shakespeare, Merry Wives of Windsor*, iv. 2.

But more have been by avarice oppress, And heaps of money crowded in the chest. *Dryden.*

2. Thorax.

Such as have round faces, or broad chests, or shoulders, have seldom or never long necks.—*Sir T. Browne, Vulgar Errors*.

He describes another by the largeness of his chest, and breadth of his shoulders.—*Pope, Notes on Homer's Iliad*.

3. Coffin: (the Greek for chest is κόφινος). *Obsolete.*

He is now ded, and nailed in his chest, *Chaucer, Prologue to the Clerk's Tale*.

4. Sometimes used instead of *Caisson*.

Chest. *v. a.* Place in a chest or coffin.

He dieth, and is *chested*.—*Genesis*, l. 26, chapter heading.

That afternoon we *chested* our late commander, putting some great shot with him into it, that he might presently sink.—*Terry, Voyage to the East Indies*, p. 41: 1655.

Chested. *adj.* Pertaining to the chest.

The following extract is probably to be read *broad-shouldered* and *chested*, i.e. with *broad* common to the two adjectives: otherwise the form (see preface) is rare.

Jeffery [Hudson] was born in the parish of Okenham, in this county, where his father was a very proper man, broad shouldered and *chested*, though his son never arrived at a full ell in stature.—*Fuller, Worthies of England, Euxlandshire*. (Rich.)

Chéstring. *verbal abs.* Placing in a coffin.

The sum of their answer was, that the boweling and cering was done... the leading and *chesting* was preparing.—*Strype, Memoirs*, an. 1535. (Rich.)

Chéstrut. *s.* [Fr. *chastaigne*; Lat. *castanea*.]—the sound and spelling required by the etymology is *chestn-nut*, with two *ns*; in reality, however, the *t*, as well as the first *n*, is either lost or being lost, the common sound being *ches-nut*, in which way it is sometimes spelt.] Fruit of the chestnut tree; colour resembling that of a chestnut.

A woman's tongue,
That gives not half so great a blow to the ear,
As will a *chestnut* in a farmer's fire.

Shakespeare, Taming of the Shrew, i. 2.
His hair is of a wood colour.—An excellent colour: your *chestnut* was ever the only colour.—*Id.*, *As you like it*, iii. 4.

Then he inquired if one of those men was mounted on a bay mare, and the other on a *chestnut* gelding, with a white streak down his forehead.—*Smollett, Expedition of Humphry Clinker*.

His short upper lip indicated a good breed; and his *chestnut* curls clustered over his open brow, while his shirt-collar thrown over his shoulders was unrestrained by handkerchief or riband.—*Disraeli the younger, Coningsby*, b. i. ch. i.

Chétah. *s.* [?] Feline animal so called, akin to the leopard.

Leopards are the only formidable members of the tiger race in Ceylon. . . . By Europeans they are commonly called *chétahs*, but the true *chétah* or hunting-leopard does not exist in Ceylon.—*Sir E. Tennent, Ceylon*, pt. ii. ch. i.

Chévalier. *s.* [Fr.] Knight; gallant strong man.

Renowned Talbot doté expect my aid;
And I am lowly by a traitor-villain
And cannot help the noble *chevalier*.

Shakespeare, Henry VI. Part I. iv. 3.
The French *chevaliers*, after they had broken their lances, came to handy blows, fighting with all the heat and valour that could be devised.—*Time's Storehouse*, p. 133. (Ord MS.)

Chéveril. *s.* [N.Fr. *cheverel*.] Kid; kid-leather. *Obsolete*; superseded by Kid.

O, here's a wit of *cheveril*, that stretches from an inch narrow to an ell broad.—*Shakespeare, Romeo and Juliet*, ii. 4.

Used adjectively; and meaning *elastic* like a kid glove.

Neither the captains nor souldiers can stand or prevail. And no marvel; for their armour is of *cheveril* leather; and the nature of *cheveril* leather is, that if a man take it by the sides, and pull it in breadth, he may make a little point as broad as both his hands; if he take it by the ends, and pull it in length, he may make it as small as a thread. Most men now a dayes have *cheveril* consciences! if they make their consciences wide enough, and large enough; if it touch another man's profit, they make them as small as a thread.—*Bishop of Chichester, Sermon at Paul's Cross*, c. viii: 1576.

A sentence is but a *cheveril* glove to a good wit: how quickly the wrong side may be turned outward.—*Shakespeare, Twelfth Night*, iii. 1.

Which gifts the capacity
Of your soft *cheveril* conscience would receive,
If you might please to stretch it.

Id., *Henry VIII.* ii. 3.

Chéverilized. *adj.* Rendered like kid-leather, in respect to pliability. *Obsolete*, rare.

I appeal unto your own, though never so much *cheverilized*, consciences, my good calumniators;

can there be inferred a just accusation?—*Bishop Mountagu, Appeal to Caesar*, p. 23.

Chévin. *s.* [Fr. *chevesne*.] Same as Chub.

Seldom, said Guyon, yields to virtue aid.

Spenser, Faerie Queen.
They maken many a wrong *chévisance*,
Heaping up waves of wealth and woe.

Id., *Shepherd's Calendar*, May.
Chévron. *s.* [Fr.—see last extract.] In *Heraldry*. One of the honourable ordinaries: (it represents two rafters of a house, set up as they ought to stand).

The masques were placed in a great concave shell, like mother of pearl—the top thereof was stuck with a *chevron* of lights, which, indented to the proportion of the shell, struck a glorious beam upon them, as they were seated one above another.—*B. Jonson, Masques at Court*.

[*Chevron*. The representation of two rafters in heraldry. French, *chevron*, Provençal, *cabron*, *cabiron*, Spanish, *chirio*, a rafter; *cabrial*, a beam, *cabrones*, wedges of wood to support the breech of a cannon. Greek, *καπριωλος*, το ερεισμα της στεγης, *furcilla*; *πρωτομος*, *capriolus*. Wallachian, *caferu*, *caprioru*, beam, rafter. The word seems unquestionably connected with the name of the goat, and as French *cabrer* is to rear like a goat, the term may be applied to rafters reared against each other like butting goats. The Hungarian for rafter is *szarufa*, literally horn-wood. On the other hand, German *bock* is generally applied to a piece of wood on which anything rests, a trestle for sawing, carpenter's bench, dogs in a fire-place, painter's easel.—*Wedgwood, Dictionary of English Etymology*.]

Chévroned. *adj.* In the shape of a chevron; decorated with chevron-shaped ornaments.

Their bases were of watchet cloth of silver, *chévroned* all over with lace.—*B. Jonson, Masques at Court*.

If little faults, proceeding on distemper,
Shall not be wink'd at, how shall we stretch our eye,

When capital crimes, *chew'd*, swallow'd, and digested,
Appear before us? *Shakespeare, Henry V.* ii. 2.

This pious cheat, that never suck'd the blood,
Nor *chew'd* the flesh of lambs. *Dryden, Fables.*

The vales
Descending gently, where the lowing herd,
Chews verdurous pasture. *A. Philips.*

Chew the cud. Ruminant. See Cud. Hence in a metaphorical sense (both with and without the substantive), think, meditate.

I believe, however, that I shall for some time continue to *chew the cud* of reflection upon many observations which this original discharged.—*Smollett, Expedition of Humphry Clinker*.

Some books are to be tasted, others to be swallowed, and some few to be *chewed* and digested: that is, some books are to be read only in parts; others to be read, but not curiously; and some few to be read wholly, with attention.—*Bacon*.

Chew. *v. n.* Ruminant: (with *on*). See preceding entry.

I will with patience hear, and find a time;
Till then, my noble friend, *chew* upon this.

A kind of dainty *chéwet*, or minced pie.—*Florio, Italian Dictionary*, in v. *Fringott*.
Men laden with bottles of wine, *chéwets*, and currant-custards.—*Middleton, Witch*, ii. 1.

Chéwing. *verbal abs.* Act of one who chews; process by which anything is chewed.

By *chewing*, solid aliment is divided into small parts: in a human body there is no other instrument to perform this action but the teeth. By the action of *chewing*, the spittle and mucus are squeezed from the glands, and mixed with the aliment; which action, if it be long continued, will turn the aliment into a sort of chyle.—*Arbuthnot, On the Nature and Choice of Aliments*.

Chiaroscuro. *s.* [Italian, *chiaro* = bright,

oscuro = obscure, or dark.—The thing being common to the painting of all countries, the word is indispensable: and, purely Italian as it is, its form is justifiable, except in the eyes of those who would supersede it by *light-and-shade*, or some similar combination. By spelling it *clare-obscure*, and *clair-obscure*, nothing is gained: *clare* and *clair* being as little English as *chiaro*.] In the *Fine Arts*. Distribution of the lighter and darker shades over a painting or engraving.

The engravers, from the earliest period of their art till the time of Rubens, never attempted more than to give to each object in their engravings its proper lights and shades, leaving to painting alone the privilege of producing the effect of *chiaroscuro* by the opposition of objects of dark local colour to light ones. Thus the effects of *chiaroscuro*, so forcible in the picture, were weak and incomplete in the print. . . . But engravers at present . . . are enabled to make the effect of their prints, so far as relates to *chiaroscuro*, as rich and powerful as it is in the pictures they copy.—*Rees, Cyclopædia, Clair-obscure*.
In another part of his book he awards to Germany the honour of having first practised the art of engraving in *chiaro-scuro*; although Italy, on the authority of Vasari, had long laid claim to that invention.—*Odley, History of Engraving*, ch. i.

Chiasma. *s.* [Gr.] In *Anatomy*. Central body of nervous matter formed by the junction and decussation of the optic nerves.

In no other instance is a similar junction between two corresponding nerves of opposite sides known to occur. Such an anomaly affords strong presumptive evidence of the existence of some unusual properties in the nerves thus united; and for these reasons the physiology of the *chiasma* is invested with uncommon interest.—*R. Mayne, in Todd's Cyclopædia of Anatomy and Physiology, Optic Nerve*.

We must therefore remain satisfied with the simple fact, long known, that the cerebral portion of the optic nerve divides at the *chiasma* into two parts, of which the inner decussates with that of the opposite nerve, while the outer continues its course to the eye of the same side.—*Dr. Baly, Translation of Müller's Physiology*, p. 1198.

Chibbal. *s.* [Fr. *ciboule*; A.S. *cipe*; Lat. *cepa*.] Chive, or small kind of onion. *Obsolete*.

Ye eating rascals,
Whose gods are beef and brewis, whose brave angers
Do execution upon these, and *chibbals*.

Beaumont and Fletcher, Bonduca.

Chibouque. *s.* [Turkish, with French spelling.] Turkish pipe: (common in Lord Byron's works and in descriptions of the East, but scarcely English; though such pipes can be bought in England under that name).

We find ourselves face to face with Downing Street in a turban, windbags smoking a *chibouque*, and snobs dominant in a divan.—*Hannay, Singleton Fontenoy*, b. ii. ch. v.

clay.—*Theodore Hook, Gilbert Gurney*, vol. i. ch. i.

Chip. s.

ment.

Chiragrical. adj. Having gout in the hand;
subject to gout in the hand. *Rare.*

Chiragrical persons do suffer in the finger as well
as in the rest, and sometimes first of all.—*Sir T.
Browne, Vulgar Errors.*

[The editor has left the spelling of this
word as he found it. Though it can
scarcely be called an English word, it be-
longs to a class of terms which, if made
English, would be useful.

The Substantive which it suggests, *Chira-
gragra*, stands in the same relation to the
Greek word *χείρ* = hand, that *Podagra*
stands to *πούς* (gen. *ποδός*) = foot; the
meaning of the former being *gout in the
hand*. *Podagra*, on the contrary, though
it may, and might conveniently, be re-
stricted to *gout in the foot*, means *gout* in
general. The *form*, however, of the word
is what more especially commands atten-
tion; inasmuch as the compound in ques-
tion is, for a reason which will soon appear,
the best text for the discussion of a ques-
tion of some importance. A reference to
Chiroptera will show that the entry gives
one orthography, the extract another; this
being only a different way of saying that the
principle upon which the Greek *u* is repre-
sented in English is uncertain.

The leading facts in this question are—

(1) the Latin practice of representing the
Greek *u* by *i*, e.g. *χείρ* as *chir-*; the quan-
tity (long) being preserved: (2) the Eng-
lish practice of considering, by a sort of
etymological fiction, that most words of

Greek origin come to us through the Latin, and are to be spelt as the Romans either did spell or would have spelt them. (See Cee, Kay, Alcaid.) Admitting this, we are met by a complication in the word under notice. It is the earliest Latin derivative from *χείρ* known; the others, numerous as they are, belonging to the later stages of the language; and the form in which it appears in two well-known passages from Horace, and one from Persius, is neither in *ei* nor *i*. Neither is the vowel long. The form, in short, is *chēragra*. To consider this as made for the sake of the metre is to undervalue the fact that *χείρ*-*ός* as well as *χείρ*-*ος* is a genitive of *χείρ*; and, even if we treat *χείρ* merely as a poetical form (as the lexicographers do), we must admit that it is the simpler and more radical. This suggests the likelihood that, if extreme Latinity of orthography be the aim of those who object to the use of the Greek *ει*, a case (at least in the compounds of *χείρ*) may be made in favour of *e*. If so, the question as to whether the Greek or the Latin spelling is changed is the question whether the basis of the Latin derivatives was *χείρ* or *χειρ*. It is probable that where the word was taken, as a whole, from the Greek the former principle prevailed; where put together by the Romans themselves, the latter.]

Chirk. v. n. Chirp. *Obsolete.*

Chíromancy. s. [Gr. *χείρ* = hand, *μαντεία* = prophecy.] Art of foretelling the events of life by inspecting the hand.

There is not much considerable in that doctrine of *chíromancy* that spots in the top of the nails, do signify things past; in the middle, things present; and at the bottom, events to come.—*Sir T. Browne, Vulgar Errors.*

Other signs [of melancholy] there are taken from physiognomy, metoposcopy, *chíromancy*.—*Burton, Anatomy of Melancholy*, p. 53.

Chirópodist. s. (unless, contrary to the opinion of the editor, we derive the first element of this word from *χείρ* = hand, the proper spelling is with a *k*; since the use of *c* simply would create the risk of the word being sounded *siropodist*; and with *ch* we have a temptation to connect the derivation with *χείρ* = hand.) [? Gr. *κείρω* = clip, shear, pare, and *πούς*, *πόδος* = foot.] One who

professes to cure bunions, corns, and similar accidents in the feet; corncutter.

Omitting, then, the Galeopithecus, the *Chiroptera* form, without perhaps a single exception, the most distinctly circumscribed and natural group to be found in the whole class of the Mammifera. The characters by which the order thus restricted is distinguished are as follow:—General form disposed for flight; an expansion of the integument stretched between the four members, and the fingers of the anterior extremities, which are greatly elongated for that purpose; the flying membrane naked, or nearly so, on both sides. Mammæ pectoral, clavicles very robust; forearm incapable of rotation in consequence of the union of the bones of which it is composed.—*T. Bell, in Todd's Cyclopædia of Anatomy and Physiology.*

Chirp. v. n. [see Crush.] Make a noise like that of birds when they call.

She chirping ran, he peeping flew away.

The cricket chirps; the light burns low,

'Tis nearly twelve o'clock.

Tennyson, The Death of the old Year.

Chirp. v. a. Make cheerful.

And chirp went the grasshopper under our feet. *Spectator.*

The one has a joyous, easy, laughing note, the other a loud harsh chirp.—*White, Natural History of Selbourne*, let. 16.

Chirper. s. One that chirps; one that is cheerful; (in the following extract the word, as applied to one of the warblers, takes the guise of an ornithological name; for which, however, it is scarcely definite enough. It is not found in Yarrell, except so far as it applies to birds in general with a chirping note.)

The chirper... begins his notes in the middle of March, and continues them through the spring and summer till the end of August.—*White, Natural History of Selbourne*, let. 16.

Chirping. part. adj.

1. Uttering chirps; sounding as a chirp.

The careful hen *Gay, Pastorals.*

Calls all her chirping family around.

Thomson, Seasons, Spring.

2. With glass. Making cheerful. (Sometimes considered a shortened form of Cheeruping. Chirping, however, is the older word. The connection between the notions of chirping and cheerfulness, along with the simile 'merry as crickets,' makes it probable that Cheeruping is a mere catachresis.)

Jack T... has so far transgressed the Fannian law, which allows a chirping-cup to satiate not to surfeit, to mirth not to madness.—*Howell, Familiar Letters.*

Chirping. verbal abs. Gentle noise of birds.

The two chapels perished together: that ancient chapel where Wolsey had heard mass in the midst of gorgeous copes, golden candlesticks, and jewelled crosses, and that modern edifice which had been erected for the devotions of James and had been embellished by the pencil of Verrio and the chisel of Gibbons.—*Macaulay, History of England*, ch. xxiii.

natural *chitchat* of Temple.—*Lamb, Essays of Elia, The gentle Style in Writing.*

Later in the afternoon, about five o'clock, the high change of political gossip, when the room was crowded, and every one had his rumour, Mr. Rigby looked in again to throw his eye over the evening papers, and catch in various *chitchat* the tone of public or party feeling on the 'crisis.'—*Disraeli the younger, Coningsby, b. i. ch. v.*

Chitterling. s. [see Crow=mesentery.]

2. Frill to the breast of a shirt: (apparently a very ancient part of dress).

We Englishmen can mock and scoff at all countries for their defects; but, before they have many times mustered before us, we can learn by lyle and lyle to exceed and pass them all. . . . Of an Italian waist, we make an English petticoate; of a French ruffe, an English chitterling, &c.—*Gascogne, Delicate Diet for Drunkards: 1576.*

Chittyface. s. [The immediate origin of the word seems to be *chicheface*, a Norman-French word, and one which is still to be found in the French dictionaries. Cotgrave gives

'*Chiche-face, m. a chicheface, micher, speake-bill, wretched fellow, one out of whose nose hunger drops.*']

For the first element, the derivation, as far as its French origin is concerned, is clear. Chice sometimes explained *little*, of no value, more usually takes the allied meaning of *mean*, or *niggardly*. So it does in Cotgrave, as above.

Richardson, who has rightly connected the comparatively recent term Chittyface with *chicheface* rather than with *chit*, and is liberal in his instances of the use of the simple adjective, also supplies examples of *Chinche*, *Chinchy*, and *Chinchery*, all applied to avarice, but none later than Chaucer.

Its remote origin has been assigned to the Latin *siccus*=dry. It has also been treated as a word of Keltic origin. To this it may be added that a connection with the Latin *ciur*=tame (whence *mean-spirited*) is possible.

Upon a word regarding which no French lexicographer has ever professed to see his way clearly, the editor ventures a second conjecture, viz. that *face*=*vache*, and that *chicheface* was originally *chiche-vache*=lean cow, one of Pharaoh's lean kine.

The forms in -n-, i.e. *Chinche* and *Chinchery*=niggardliness, point in the direction of *Chinche*=bug or bloodsucker.]

? Lean-face: (used adjectivally in the extract).

I stole but a dirty pudding out of an alms-basket to give my dog when he was hungry, and the peaking chitty-face page hit me in the teeth with it.—*Massingier, Virgin Martyr, ii. 1. (Rich.)*

Chivalric. s. Chivalrous.

And what'er else to chivalry belongs,

He would not cease 'till he reveng'd their wrongs.

Dryden.

We find the divinity lectures of Don Quixote, and the penance of his squire, are both of them in the ritual of chivalry.—*Bishop Warburton, On Love's Labour's lost.*

I look upon chivalry as on some mighty river, which the fablings of the poets have made immortal. It may have sprung up amidst rude rocks, and blind deserts. But the noise and rapidity of its course, the extent of country it adorns, and the towns and palaces it ennobles, may lead a traveller out of his way, and invite him to take a view of those dark caverns,

'unde supernd

Plurimus Eridani per sylvam volvitur amnis.'—*Bishop Hurd, Letters on Chivalry and Romance, let. 2.*

I thought ten thousand swords must have leaped from their scabbards to avenge even a look that threatened her with insult. But the age of chivalry is gone.—*Burke, Reflections on the French Revolution.*

Chiver. s. ? Same as Chimere.

What is it not that Martin doth not rent?

Cappes, tippets, gowns, blacke chivers, rotchetts

white;

Communion bookes, and Homelies, yea so bent

To teare, as women's wimples feeble his spite.

Thus tearing all, as all apes use to doo;

He tears withall the church of Christ in two.

Anon. A.D. 1612.

1. Threads or filaments (stamens) which support the anthers in flowers.

The masculine or prolific seed contained in the *chives*, or apices of the stamina.—*Ray, Wisdom of God manifested in the Works of the Creation.*

2. Salad plant so named (*Allium Schoenoprasum*).

The leaves are awl-shaped, threadlike, and produced in tufts. . . . *Chives*, when gathered, are cut or shorn by the surface, and on this account are generally named in the plural. The foliage is used as a salad ingredient in spring, being esteemed milder than onions or scallions.—*Loudon, Encyclopedia of Gardening, in voce.*

Chlorate (of Potash). s. Salt consisting of chloric acid and potassa, used as a de-flagrating powder in the manufacture of matches and percussion caps.

Chlorate, or oxy muriate, of potash has a cooling, somewhat unpleasant and nitrous, taste. It does not bleach. . . . When strongly triturated in a mortar it crackles, throws out sparks, and becomes luminous. It deflagrates upon red-hot cinders like nitre; when triturated along with sulphur, or phosphorus, it detonates with great violence, not without danger to the hands of the operator if they be not protected by a thick glove. Similar detonations may be pro-

duced with cinnabar or vermillion, sulphuret of potassium, sugar, volatile oils, &c. A mixture of sugar-or starch with *chlorate of potash* is readily inflamed by a drop of sulphuric acid, and this experiment is the basis of the preparation of the oxygenated matches, as they have been commonly called.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Chloride (of Lime). s. Third solution of the combination of lime and chlorine, used in bleaching, and as a disinfectant.

When a weak solution of caustic potash or soda is saturated with chlorine, it affords a bleaching liquor which is still used by some bleachers and calico-printers for their most delicate processes; but the price of the alkalis has led to the disuse of these *chlorides* as a general means, and has occasioned a general employment of *chloride of lime*.—*Ure, Dictionary of Arts, Manufactures, and Mines.* (See also extract under Chlorine.)

Chlorine. s. [the first syllable from the Gr. *χλωρος*=grass-green; the second, one of the artificial terminations of Chemistry, showing that the elementary substance to which it applies is in the same class with Iodine, Bromine, and Fluorine. Its derivatives are numerous; some being the names of comparatively common objects in commerce and manufactures, as Chlorate, Chloric (acid), Chloride, Chloruret.]

Elementary gaseous substance so called: (in the same class with Iodine, Bromine, and Fluorine, as indicated by its termination.)

It [*chlorine*] has a peculiar smell, and irritates the nostrils most violently, when inhaled, as also the windpipe and lungs. It is eminently noxious to animal life, and, if breathed in its undiluted state, would prove instantly fatal. It supports the combustion of many bodies, and, indeed, spontaneously burns several without their being previously kindled. The resulting combinations are called *chlorides*, and act most important parts in many manufacturing processes. Water absorbs, at the ordinary temperature of the atmosphere, about double its volume of *chlorine*, and acquires the colour, smell, and taste of the gas, as well as its power of destroying or bleaching vegetable colours.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Chloroform. s. [the *chlor-* is the first syllable in *chlorine*; the *form-* is the first in *form-ic*, the name of an acid obtained from ants, in Latin *form-icæ*. The truncation of the word, i.e. the loss of the ordinary adjuncts to *form*, as *ic*, *yl*, &c., gives it the appearance of a derivative from *form*=shape, with which it has nothing in common. The compound itself belongs to the nomenclature of Chemistry, the term being an artificial one: see first extract.]

In *Chemistry*. Limpid colourless liquid used for the production of a vapour causing, when inhaled, insensibility to pain; vapour so produced: (employed in Surgery to diminish the pain of operations).

[In a complex science, which is in a state of transition, capricious and detached derivations of terms are common; but are not satisfactory. In this remark I have especial reference to chemistry; in which the discoveries made, especially in organic chemistry, and the difficulty of reducing them to a system, have broken up in several instances the old nomenclature, without its being possible at present to construct a new set of terms systematically connected. Hence it has come to pass that chemists have constructed words in a capricious and detached way; as by taking fragments of words, and the like. . . . Several words have recently been formed by chemists, by taking syllables from two or more different words. Thus Chevreul discovered a substance to which he gave the name *Ethyl*, from the first syllables of the words *ether* and *alcohol*, because of its analogy to those liquids in point of composition. So Liebig has the word *chloral*. Liebig, examining the product of distillation of alcohol, sulphuric acid, and amber, found a substance which he termed *Aldehyd*, from the words *Alcohol dehydrogenated*. This mode of making words has been strongly objected to by M. Dumas. Still more has he objected to the word *Mercaptan* (of Zeise), which, he says, rests upon a mere play of words; for it means both *mercurium captans* and *mercurium aptum*. Dumas and Peligot, working on pyridigenous acids, found reason to believe the existence of a substance which they called *methylene*, deriving the name from *methy*, a spirituous fluid, and *hyle*, wood. Berzelius remarks that the name should rather be *methyl*, and that *hyle* may be taken in its signification of matter, to imply the Radical of Wine; and he proposes that

the older *Æther-Radical*, shall be called *Æthyl*, the newer *Methyl*. This notion of marking by the termination *yl* the hypothetical compound radical of a series of chemical compounds has been generally adopted; and, as we see from the above reference, it must be regarded as representing the Greek word *εἶναι*; and such hypothetical radicals of bases have been termed in general *basisyls*. Bunsen obtained from Cadet's fuming liquid a substance which he called *Alkarsin* (alkali-arsenic?); and the substance produced from this by oxidation he called *Alkargen*. . . . The discovery of Kakodyl was the first instance of the insulation of an organic metallic *basisyl*. The first of the Hydrocarbon radicals of the Alcohols was the radical of Tetrylic alcohol obtained by Kolbe from Valerate of Potash, and hence called *Tetyl*. *Chloroform* is perchloride of formyl, the hypothetical radical of formic acid.—*Whewell, Novum Organum renovatum*, aph. xxviii. with commentary.] The safety, as well as the efficacy of this application of the vapour of æther, of *chloroform* . . . has now been ascertained by abundant experience. And if we consider what it has done, and what it promises, . . . we shall scarcely deem the proposal extravagant which has been made by one of our hospital physicians, that, for so merciful a boon to suffering humanity, public thanksgiving should be humbly offered up to Heaven in our churches.—*Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Chlorometer. s. Instrument for Chlorometry.

In graduating the arsenical chlorometer, M. Gay-Lussac takes for his unity the decolouring power of one volume of chlorine at 32° Fahrenheit, and divides it into a hundred parts.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chlorometry. s. [Gr. μέτρον = measure.] Process for measuring, or testing, the decolourizing, or bleaching, power of the commoner commercial chlorides.

He [Gay-Lussac] now prescribes as the preferable plan of *chlorometry*, to pour very slowly from a graduated glass tube a standard solution of the chloride, to be tested upon a determinate quantity of arsenious acid dissolved in muriatic acid, till the whole arsenious be converted into the arsenic acids. The value of the chloride is greater, the less of it is required to produce this effect.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chlorophyll. s. [Gr. χλωρός = green, φύλλον = leaf.] In *Botany*. Colouring matter of vegetables.

To this is referred all the kinds of coloured granules which occupy the interior of vegetable tissue. They have a spheroidal, irregular figure, are often angular, and consist of a semi-fluid gelatinous substance, which seems to be a coagulum of the fluid contents of the cells. The colour of plants, especially the green colour, is produced by the presence of *chlorophyll*, which may be considered a vital secretion.—*Lindley, Introduction to Botany*, b. i. sect. 7, § 83.

Chlorosis. s. [Gr. χλωρός = green.] Medical term for Greensickness.

But the man without sin, the Moravian rabbi, Has perfectly cured the *chlorosis* of Tabby.

Chock. v. a. ? Heap or fill up, as in Chock-full; ? tossing about.

Who scarce a shirt had but the day before,
Nor a whole stocking to keep out the cold,
Hath a whole wardrobe at command in store;
And in the tavern in his cups doth roar,
Chocking his crowns.

Drayton, Agincourt, p. 79. (Ord MS.)

Chock-full. adj. [apparently from *choke-full*; a derivation which is not incompatible with the provincial German form *geschocht voll* given by Wedgwood; though, perhaps, independent of it; the German origin of the word being uncertain; at any rate only indirectly connected with *choke*.] Full up to the brim. *Colloquial*.

Chocolate. s. [Spanish.] Nut of the Theobroma Cacao; cake or mass made by grinding the kernel of the cacao-nut with other substances; infusion of the same.

Chocolate is certainly much the best of these three exotic liquors: its oil seems to be both rich, alimentary, and anodyne.—*Arbutnot, On the Nature and Choice of Aliments*.

In fumes of burning *chocolate* shall glow,
And tremble at the sea that froths below. Pope.
The Spaniards were the first who brought *chocolate* into use in Europe, to promote the consumption of the cacao-nuts, achiot, and other drugs, which their West Indies furnish, and which enter the composition of *chocolate*.—*Chambers*.

Chocolate is flavoured with cinnamon and cloves in several countries instead of the more expensive vanilla. In roasting the beans the heat should at first be very slow, to give time for the humidity to escape. . . . *Chocolate* is sometimes adulterated with starch; in which case it will form a pasty consistence mass when treated with boiling water.—*Ure, Dictionary of Arts, Manufactures, and Mines*.
The Duchess of Portsmouth had poisoned him in a cup of *chocolate*.—*Macaulay, History of England*, ch. iv.

Dryden, Translation of Persius' Satires.

There's no liberty like the freedom of having it at my own choice, whether I will live to the world, or to myself.—*Sir R. L'Estrange*.

To talk of compelling a man to be good is a contradiction: for where there is force there can be no choice. Whereas all moral goodness consisteth in the elective act of the understanding will.—*Grew, Cosmologia Sacra*.

Whether he will remove his contemplation from one idea to another, is many times in his choice.—*Locke*.

Tom Cogit never presumed to come near the young Duke, but paid him constant attention. He sat at the bottom of the table, and was ever sending a servant with some choice wine, or recommending him, through some third person, some choice dish. It is pleasant to be 'made much of,' as Shakespeare says, even by scoundrels.—*Disraeli the younger, The young Duke*.

2. Chary; frugal; careful: (used of persons).

He that is choice of his time, will also be choice of his company, and choice of his actions.—*Jeremy Taylor, Rule and Exercises of Holy Living*.

Neither the weight of the matter, of which the cylinder is made, nor the round voluble form of it, are any more imputable to that dead choiceless creature, than the first motion of it; and, therefore, it cannot be a fit resemblance to shew the reconcilableness of fate with choice.—*Hammond*.

A band of men,
Collected choicely from each county some.

Choir. s. [A.S. chor; N.Fr. choir, Fr. chœur; Lat. chorus.—Here note:

(1.) The resemblance of the sound of the French diphthong *oi* to that of *o* preceded by *w*: i. e. compare the sound of *roi* (king) with that of *wook*. They are by no means identical. What, however, we may call the *w* element is common to both.

(2.) The tendency in several provincial dialects, and in the mouth of careless speakers sporadically distributed, to sound *oi* as *i*, e.g. *join* as *jine*.

Out of these two facts taken together the original sound of the French choir has become *quire*, and the spelling has followed the pronunciation, giving *Quire* and *Quirister*.]

Their stops and chords, was seen; his volent touch
Instinct thro' all proportions, low and high,
Fled and pursu'd transverse the resonant fugue.
Milton, Paradise Lost, xl. 560.

2. Combination of two or more cotemporaneous musical sounds. See Harmonics.
3. Straight line which joins the extremities of an arc.

This form has also the advantage of covering the line of retreat better than the first; at the same time that it enables any one part of the line to be more quickly reinforced from any other part, because troops passing between any two parts move on the chord of an arc, while in the first case, all movements of that nature being in rear of the line, troops passing between any two parts must march round the circumference. — *MacDougall, Modern Warfare as influenced by modern Artillery, ch. vi.*

Chórded. adj. Furnished with strings or chords; stringed.

What passion cannot music raise and quell?
When Jubal struck the chórded shell,
His list'ning brethren stood around. *Dryden.*

Chorepiscopál. adj. [L. Lat. *chorepiscopus* = local bishop.] Appertaining to the office of such bishops as, during the early centuries of the Christian era, were appointed over districts into which it was found convenient to divide the larger sees; sometimes used as equivalent to suffragan, as opposed to metropolitan.

Desiring his sense of several passages therein contained, relating to the Valentinian heresy, episcopal and chorepiscopál power, and some emergent difficulties concerning them. — *Bishop Fell, Life of Hammond, § 1.*

Choriámblc. adj. (used also as a substantive; so that Choriambic and Choriambics are English equivalents to Choriambus and Choriambi). In *Greek and Latin Prosody*. Of the nature of a choriambus; constituting a choriambus; consisting of choriambi (applied both to the foot itself, and to certain metres characterized by it). See Iambic.

Choriámbus. s. [Lat.] In *Greek and Latin Prosody*. Foot of four syllables, of which the first and last are long, the two intervening ones short, as in *currículum*.

Mr. Trochee was what Dr. Johnson called a sound sullen scholar. . . . He had a clear head, and no inconsiderable amount of that old-fashioned catapult kind of sarcasm so much in vogue during the last century. He was, indeed, exemplary in his way, and if you had asked him what 'religio' was, he would have replied at once that it was a choriambus. — *Hannay, Singleton Fontenoy, b. i. ch. i.*

This word being limited to Greek and Latin prosody, the reasons which, either really or apparently, justify the application of the terms Anapest, Dactyl, Iambic, and Trochee to certain English feet or measures have no place here. The same applies to Choliambic.

Chórion. s. [Gr.] In *Physiology*. Outer covering of the ovum (egg).

In birds the shell with its lining membrane forms the external covering of the egg. . . . The ovum of mammalia at the time when it arrives at the uterus has also a similar external envelope, which has received in man and most animals the general appellation of chorion. — *Dr. Allen Thompson, Generation, in Todd's Cyclopædia of Anatomy and Physiology.*

Chorógrapher. s. [Gr. *χώρας* = region, *γράφω* = describe.]

1. One who describes particular regions or countries.

The truth is only to be found in their works, who celebrate the lives of great men, and are commonly called biographers, as the others should indeed be termed topographers or chorógraphers; words which might well mark the distinction between them; it being the business of the latter chiefly to describe countries and cities, which, with the assistance of maps, they do pretty justly, and may be depended upon: but as to the actions and characters of men, their writings are not quite so authentic, of which there needs no other proof than these eternal contradictions, occurring between two topographers who undertake the history of the same country. — *Fielding, Adventures of Joseph Andrews.*

2. Geographical antiquarian or critic who, in the comparison of modern with ancient geography, investigates the locality of places mentioned in the older writers, and discusses the question of names for which the site, and sites for which the name, is uncertain.

Places unknown, better harped at in Camden and other chorógraphers. — *Milton, History of England, b. iv.*

Nurcia, situated in Umbria, which our modern chorógraphers call Spoleto. — *Twicken, p. 8.*

This is the sense to which the word, at present, may conveniently be restricted. The enquiry it denotes is one of a definite, specious, and important kind; for which there is no unequivocal name. Nor is it wanted for any other purpose; notwithstanding the remark under Chorography in the previous editions, that 'it is less in its object than Geography, and greater than Topography.'

Chorográphical. adj. Appertaining to, or having the character of, Chorography.

I have added a chorográphical description of this terrestrial paradise. — *Sir W. Raleigh, History of the World.*

Metaphors it would well please any man to look upon chorográphical, topographical delineations; to behold, as it were, all the remote provinces, towns, cities of the world. — *Burton, Anatomy of Melancholy, p. 276.*

The muse, yet observing her begun course of chorográphical longitude, traces eastward the southern shore of the isle. — *Selden, On Drayton's Polyblotton, il.*

I may perhaps be found fault withal, because I do not chorográphically place the funeral monuments in this my book. — *Weever, Ancient Funeral Monuments of Great Britain, Ireland, and Islands adjacent.*

Chorógraphy. s. [from Gr. *χώρας* = place.] Art, practice, or department of the Chorographer.

For most of what I use of chorography, join with me in thanks to that most learned nourse of antiquity, my instructing friend, Mr. Camden. — *Selden, On Drayton's Polyblotton, pæfæc.*

This I have described to your lordship, because I think there might be good use made of it for chorography; for, otherwise, to make landscapes by it were illiberal. — *Sir H. Wotton, Reliquia Wottonianæ, p. 300.*

We have some evidences of it in our first entrance into it, in this part of the chorography of Egypt. — *Bishop Stillingfleet, Origines Sacre.*

In delightful raptures we descry,
As in a map, Zion's chorography. *Bishop King, On Sandys's Psalms.*

Chorógraphy. s. [from Gr. *χορός* = dance.] Description of dancing. (In the following extract it is the title of a work; and, as such, a proper rather than a common name. It was, however, though it has failed to take

root in our language, probably intended to be a word of the same general import as Geography, and the other compounds of *γραφία*; and it is likely that instances of its use as a common term may be found. In some of the dictionaries and cyclopædias it is spelt Choregraphy, perhaps to distinguish it from Chōrography, description of countries, perhaps under the notion that it came from *chorea*).

For the further improvement of dancing. A Treatise of Chorography or the Art of Dancing Country Dances after a new character, &c. Translated from the French of Monsr. Feuillet. . . . By John Essex, Dancing Master. London: 1710.

Chóroid. adj. Appertaining to the vascular, as opposed to the specially nervous, portion of the retina.

Physiologically speaking, the sensitive retina must be stimulated by the light which paints, upside down, an image of the external or externalized object on its surface, or on that of the chóroid coat, in order that the vision of that object may be produced. — *Ingleby, Introduction to Metaphysics, pt. i. b. i. § 26.*

Used substantivally for the vascular portion itself.

In the turtle the sclerotic is cartilaginous, thickest behind, and thicker at the temporal than at the nasal side of the globe. The cornea is flatter than in the Emys or land-tortoise. The optic nerve penetrates the sclerotic. . . . The chóroid is thick, and coloured by a deep-brown pigment. — *Owen, Anatomy of Vertebrates.*

Chórus. s. [Lat.]

1. Number of singers; concert.

Pareus, commenting on the Revelation, divides the whole book as a tragedy, into acts distinguished each by a chorus of heavenly harpings and song between. — *Milton, Samson Agonistes, introduction.*

Lo praise so just let every voice be join'd,
And fill the gen'ral chorus of mankind! *Pope.*

2. Persons who are supposed to behold what passes in a tragedy, and sing their sentiments between the acts; piece of lyric poetry so sung,

For supply,
Admit me chorus to this history.

3. Part of a musical composition in which the company join the singer.

Let's all join in chorus and give him our praise,
For sure such a man was ne'er seen in our days.
Song on Lunardi's Balloon.

Chose. s. [Fr. *chose* = thing, matter; from the Latin *causa* = cause, whence its special legal import.] Matter; subject-matter; question. See extract.

Chose is used in divers senses, of which the four following are the most important: (1) *Chose* local, a thing annexed to a place, as a mill, &c. (2) *Chose* transitory, that which is moveable, and may be taken away, or carried from place to place. (3) *Chose* in action, otherwise called *chose* in suspense, a thing of which a man has not the possession or actual enjoyment, but has a right to demand it by action or other proceeding. . . . (4) *Choses* in possession, where a person has not only the right to enjoy, but also the actual enjoyment of a thing. — *Wharton, Law Lexicon.*

Chósen. part. adj. Selected; elected.

If king Lewis vouchsafe to furnish us
With some few bands of chosen soldiers,
I'll undertake to land them on our coast.

Shakespeare, Henry VI. Part III. iii. 3.

Your lordship's thoughts are always just, your numbers harmonious, your words chosen, your expressions strong and manly, your verse flowing, and your turns as happy as they are easy. — *Dryden, Essay on the Æneid. (Ord MS.)*

Chough. s. [A. S. *ceo*.] Bird (*Fregilus Graculus*) resembling a jackdaw, but with red beak and red legs; commonest in Cornwall, whence called the Cornish Chough. See last extract. (For a local bird the chough is mentioned remarkably often by

the old writers; certainly by many who never saw one. The bird itself may have been commoner than it is now. It is more probable, however, that the term had then a wider application.)

In birds, kites and kestrels have a resemblance with hawks, crows with ravens, daws and choughs. —Bacon, *Natural and Experimental History*.

To crows the like impartial grace affords,
And choughs and daws, and such reproblic birds.

From the Starling and Pastor . . . the transition [from the Starling] to the true crows by the intervening *chough* is easy and natural. . . . The Cornish *chough*, for which the genus *Fregilus* was established by Cuvier, is readily distinguished from the true crows by the peculiar form of its beak. In this country the *chough* is not a common bird, and is, besides, almost exclusively confined to the sea coast, where it inhabits the highest and most inaccessible portions of rocks or cliffs, about which it walks securely by means of its strong legs, toes, and claws.

The voice of the *chough* is shrill, but not disagreeable, and something like that of the Oystercatcher. The *chough* is found in Guernsey, but not in Jersey. . . . Pennant says 'the *chough* is found in small numbers on Dover cliff, where they came by accident; a gentleman in that neighbourhood had a pair sent to him as a present from Cornwall, which escaped and stocked those rocks.' No date is mentioned, though apparently referring to his own time; but there is a poetical authority, at least, for the existence of this bird at a much earlier date. Shakespeare, in his description of the celebrated cliff which now bears his name, says, in reference to its height,

'The crows and *choughs* that wing the midway air
Show scarce so gross as beetles.'

Possibly [this is in a note] Shakespeare meant Jackdaws; for in the Macmurmer Night's Dream he speaks of the russet-headed (grey-headed) *choughs*, which term is applicable to the Jackdaw, but not to the real *chough*. . . . The *chough* is noticed as peculiar to Cornwall by Dr. William Turner in 1544. —Farrall, *British Birds*.

Choule. s. [see *JOUL*.] Fleishy excrescence growing under the throat of the turkey and some other fowls; wattle: (the description in the extract is *erroneous*).

The *choule* or crop, adhering unto the lower side of the bill, and so descending by the throat, is a bag or sachel. —Sir T. Browne, *Vulgar Errors*.

Chouse. v. a. [see last extract.] Cheat; trick; impose upon.

Long practisers in the art, who make themselves sport at others' follies, and their own delusions: but our barber on the place is *chous'd*, a very pigeon, a younger brother. —Gayton, *Notes on Don Quixote*, iv. 18.

From London they came, silly people to *chouse*,
Their hands and their faces unknown. —Swift.

Our islanders, however they may pretend to *chouse* one another, they make but very awkward rogues. —Tatler, no. 213.

I'm had, yes, and *chricked*, *choused*, slanged and banged! Celia, take him against the field—clever—has nicked me that have nicked hundreds. —O'Keefe, *Fontainebleau*, iii. 4.

With of.

When geese and pullen are seduc'd,
And sows of sucking pigs are *chous'd*.

Butler, *Hudibras*.

Yes, you are mighty wise, I warrant, mighty wise!

With all your godly tricks and artifice.

Who think to *chouse* me of my dear and pleasant vice.

Oldham, *A Drunkard's Speech in a Mask*.

[In 1609 Sir Robert Shirley, who was about to come to England with a mission from the Grand Seigneur and the King of Persia, sent before him a *Chiaus*, who took in the Turkey and Persia merchants in a way that obtained much notoriety at the time. Hence to *chiaus* became a slang word for to defraud. (Gifford's Ben Jonson, 4, 27.) In the Alchemist, which was written in 1610, we find the following passage:

'Dap. And will I tell thee? by this hand of flesh
Would it might never write good court hand more
If I discover. What do you think of me,
That I am a *chiaus*?

Face. What's that?

Dap. The Turk was here

As one should say, Doe you think I am a Turk?

Face. Come, noble Doctor, pray thee let's prevail—

You deal now with a noble gentleman,

One that will thank you richly, and he is no *chiaus*—

Slight I bring you

No cheating Clim o' the Cloughs. (Alchemist.)

'We are in a fair way to be ridiculous. What think you, Madam, *chiaus'd* by a scholar?' (Shirley in Gifford.) —Wedgwood, *Dictionary of English Etymology*.

Chouse. s. Cheat: (in the extract, however, it rather means the *person cheated*).

A Scottish *chouse*,

As when a thief has robb'd his house,
And calls himself to cunning men. Butler, *Hudibras*.

Chowre. v. n. [?] Show signs of crossness of temper, though in what particular way is uncertain.

But when the crabbed nurse
Begins to chide and *chowre*.

Turberville. (Nares by H. and W.)

Chrematistics. s. [Gr. *χρημα*, -αρος, pl. -ατα = thing, property, wealth. The *e* long. For the import of the plural ending -s, see remarks under Chromatics. The immediate origin of the word is the hypothetical adjective *χρηματιστικός*, i.e. after the manner of one who *chrematizes*; for which see Christianity.] Word suggested as a term (after the manner of Physics, Optics, and the like) for the phrase Political Economy, or, at least, for that part of it which relates to the acquisition of wealth.

(It is about thirty years since this word was suggested in a periodical. It is to be found in Wharton's Law Lexicon as a simple entry with an explanation, and perhaps elsewhere with more recognition. Still it has not taken root, though Political Economy is a cumbrous term. For a fundamental word, however, or one from which others are likely to be derived, as *Statistician* from *Statistics*, it is too long.)

They [continental writers] consider political economy as a term more properly applicable to the whole range of subjects which comprise the material welfare of states and citizens, and *chrematistics* (by which they mean nearly the same science which McCulloch and most other English writers describe as political economy) as merely a branch of it. —Brande, *Dictionary of Science and Art*.

Chrestomathy. s. [Gr. *χρηστομάθεια* = good useful learning, or thing learnt; from *χρηστός* = good, and the root of *μανθάνω* = learn, *μάθησις* = learning: the *e* long.]

Selection of extracts either on account of their intrinsic merits, or for the purpose of teaching a language: (as the title of a book, a *proper* rather than a *common* term; and generally a translation of either the Latin *Chrestomathia* or the French *Chrestomathie*).

Chrim. s. [Gr. *χρίσμα*.]

1. Unguent, or unction, employed in sacred ceremonies.

One act never to be repeated, is not the thing that Christ's eternal priesthood, denoted especially by his unction or *chrim*, refers to. —Hammond, *Practical Catechism*.

O Lord, the God of our fathers, do thou bless this oil with power, energy, and illumination of the Holy Spirit, that it may be the *chrim* against all filthiness. —Sir P. Rycaut, *Present State of the Greek and Armenian Churches*, p. 166.

He solicited the favour of England, by sending Henry a sacred rose, perfumed with musk, and anointed with *chrim*. —Hume, *History of England*, Henry VIII.

The next day he was anointed with their *chrim*, or holy oil. —Turkish Spy, vol. v. b. ii. let. 17.

Chrim was the holy oil with which heretofore all infants were anointed. This was made by the bishops, and, by a constitution of Archbishop Peacem, was to be renewed once a year. —Burn, *Ecclesiastical Law*.

Among the dreadful acts of heresy and schism which were to divide for ever the churches of the East and West were:—I. The observance of Saturday as a fast. II. The permission to eat milk or cheese during Lent. IV. The restriction of the *chrim* to the bishops. VI. The promotion of deacons at once to the episcopal dignity. VII. The consecration of a lamb, according to the hated Jewish usage. VIII. The shaving of their beards by the clergy. —Milman, *History of Latin Christianity*, b. v. ch. 4.

2. Cloth itself: (with which also women used to shroud the child, if dying within the month).

The godfathers and godmothers shall take and lay their hands upon the child, and the minister shall put upon him his white vesture, commonly called the *chrim*. —Order of Baptism in the time of King Edward VI.

Used *adjectivally*.

As undiscerned as are the phantasms that make a *chrim* child to smile. —Jeremy Taylor, *Rule and Exercises of Holy Dying*, i. § 2.

Chrimal. adj. Relating to, used in, or applied to the purposes of, *chrim*.

Having thus conjured and prayed, he falls upon singing the praises of this *chrimal* oil. —Brevint, *Saul and Samuel at Endor*, p. 316.

Chrimation. s. Application of, or practice of applying, the *chrim*. *Rare*.

The case is evident that *chrimation*, or cross-signing with ointment, was used in baptism; and it is evident that this *chrimation* was it which S. Gregory permitted to the presbyters. —Jeremy Taylor, *Episcopacy asserted*, p. 197. (Ord MS.)

Chrimatory. s. Small vessel for the oil intended for *chrim*; cruet or vessel for oil in general.

Censers, *chrimatories*, corporasses, and chalices which for thy whorish holiness might not sometime be touched, but will for thy sake be abhorred of all men. —Bale, *Discourse on the Revelations*, pt. ii. Bb viii.

The word is sometimes translated *lenticlea*, a *chrimatory*, or cruet, or vessel to contain oil; sometimes orbis, a spherical body encompassing others. —Smith, *Portrait of Old Age*, p. 215.

Chrimom. s.

1. Cloth anointed with holy unguent, which children anciently wore till christened.

Chrimom, in the office of baptism, was a white vesture which the priest did put upon the child, saying, 'Take this white vesture for a token of innocency,' and so on. —Burn, *Ecclesiastical Law*.

Used *adjectivally*, as *chrimom child*. See *Chrim*. Hence

2. Child itself so long as it wore the cloth, i.e. until christened: (the time for the christening, according to some authorities, being one month; whence, unless the date of its christening is known, a *chrimom* or *chrimom child* means, presumptively, a child under a month).

When the convulsions were but few, the number of *chrimoms* and infants was greater. —Graunt, *Bills of Mortality*.

The first common prayer book of King Edward orders that the woman shall offer the *chrimom*, when she comes to be church'd; but, if the child happens to die before her churching, she was excused from offering it; and it was customary to use it as a shroud, and to wrap the child in it when it was buried. Hence, by an abuse of words, the term [*chrimom*] is now used, not to denote children who die between the time of their baptism and the churching of the mother, but to denote children who die before they are baptized, and so are incapable of Christian burial. —Hook, *Church Dictionary*, in voce.

[Few words occur in English which end in -om, as a complete and separate element in composition; and few in which a combination of two consonants which can be pronounced either fully so as to make a second syllable, or in a slurring-manner so as to make but one, (e.g. *hē-vēn*, *hēv* = heaven,) encourages the interposition of a vowel between them. Least of all is there employed in such cases a broad vowel like o. Hence,

If *chrimom* be simply the way of spelling *chrim* with a broader pronunciation than that demanded by its etymology (*χρίσμα*), it is an unusual one.]

The exact history of the word requires a special investigation, founded more particularly upon the detail of the lower and more popular literature of the time of the Reformation. Compared with *chrim*, it appears to be more or less of a vulgarism; and if this be the case, the fact of its primary meaning being *cloth* or *vest* should not be taken alone. Combined with it must be the fact of the A.S. for covering, cloth, armour, &c., being the word *ham*. This is the *ham*- in the modern word *Hammercloth* (*hama-cloth*) as applied to the cloth covering the box of a coach.

It is suggested that it may also be the -om in *chris-om*.]

Christ-cross. s. Mark of the cross, as cut, painted, written, or stamped on certain objects.

1. In the following extract it stands on a dial in the place of the figure XII., i.e. as the sign of twelve o'clock.

Fall to your business soundly; the fescue of the dial is upon the *christ-cross* of noon.—*The Puritan*, iv. 2. (Nares by H. and W.)

2. In the following (and this was the most usual application) it means, probably, the Alpha and Omega, or beginning and end.

Christ's cross is the *criss-cross* of all our happiness.—*Quarles, Emblems*. (Ibid.)

Christ-cross-row. s. [divided *Chrisscross-row*; pronounced *Chrisscross-row*; and by this pronunciation conveying the notion that it merely rings a change on the similar syllables *criss* and *cross*. Its real derivation, however, is from the sign of the cross which preceded the letters.] Alphabet.

The cross of Christ, in its second and metaphorical acceptation, is the Christian's burden and badge; that which he is to take up, that which he is to glory in. The one is a paradox, and a smart one to the flesh; the other to the world; but both truths to be learnt before ever a letter in the Christian's *Christ-cross-row*; as being indeed, though none of the letters, as instructive as all the four and twenty.—*Whitlock, Observations on the present Manners of the English*, p. 527: 1654.

Christ-tide. s. [with *tide* = time, as in *Shrovetide*.] Christmas: (as some of the Puritan Dramatis Personæ of the Elizabethan period are represented to call that season, out of dislike to the word *mass*).

Let *Christ-tide* be thy fast,
And Lent thy good repast,
And regard not an holy day.

Cartwright, The Ordinary: 1651.
And then the turning of this lawyer's pewters
To plate at Christmas.—*Christ-tide*, I pray you.

B. Jonson, Alchemist, iii. 2.

Christ's-thorn. s. [two words rather than a compound.] Name of a prickly shrub (*Paliurus australis*).

The plains in the finest cultivation are divided by hedges of alce, *christthorn*, or wild pomegranate.—*Swinburne, Travels through Spain*, let. 2.

Christen. v. a.

1. Receive anyone, chiefly a child, as a member of the Christian church, by the ceremony of giving him a *Christian* name.

The minister of the parish where the child was born or *christened*, shall examine whether the child be lawfully baptized or no.—*Book of Common Prayer, Private Baptism*, rubric.

In the following extract the meaning is rather uncertain, or only capable of being explained after a minute inspection of the works of the author from whom it is taken.

- (1.) It may mean *Christianize*. Or,
- (2.) It may personify England, and mean Baptized, or admitted as Christian.

The use of the neuter pronoun *it* is in favour of the former meaning, without, however, being conclusive.

I am most certain this is the first example in England, since it was first *christened*.—*Jeremy Taylor, Discourse on extempore Prayer*.

2. Name; denominate.

Where such evils as these reign, *christen* the thing what you will, it can be no better than a mock millennium.—*T. Burnet*.

Christen. v. n. Be competent to administer the rite of Christening: (applied to *districts* and *persons*).

This should not exempt them from contributing towards the repairs of the mother-church; nay, though they should *christen* and receive the sacrament therein. As the parishioners had these chapels at first for their own ease, so they may resort to the mother-church, bury, *christen*, marry, and have all other services and advantages from them.—*Ayliffe, Parergon Juris Canonici*, 456. (Ord MS.)

Christendom. s.

1. Area over which Christianity is either the ruling or the recognized religion.

a. Viewed *geographically*.

What hath been done, the parts of *Christendom* most afflicted can best testify.—*Hooker*.

An older and a better soldier, none than *Christendom* gives out.

Shakespeare, Macbeth, iv. 3.
Columban and his immediate followers had hardly extended the influence of Christianity beyond the borders of the old Roman empire. But, important as outposts on the verge of *Christendom*, or even in districts which had reverted to barbarism, gradually encircling themselves with an enlarging belt of cultivation and of Christianity, they were only this gradually and indirectly aggressive. Another century had nearly elapsed when the Apostle of Germany came forth from a different part of the British Isles.—*Milman, History of Latin Christianity*.

His computation is universally received over all *Christendom*.—*Holder, Discourse concerning Time*.

- b. Viewed in respect to the population of Christians, rather than to the area occupied by them.

The destruction of Jerusalem is the only subject now remaining for an epic poem; a subject which, like Milton's Fall of Man, should interest all *Christendom*, as the Homeric War of Troy interested all Greece.—*Coleridge, Table Talk*.

2. Christianity; Christian condition. *Obsolete*.

They would not be Christians, if they should have valued the vow of their widowhood above the vow of their *christendom*.—*Bishop Hall, Honour of married Clergy*, § 2. (Ord MS.)

This rests upon the practice apostolical and traditional interpretation of Holy Church, and yet cannot be denied that so it ought to be, by any man that would not have his *christendom* suspected.—*Jeremy Taylor, Episcopacy asserted*, § 19. (Ord MS.)

Bellarmino says, they are not Christians that eat flesh in Lent, which words are extremely false, or else every one that disobeys an ecclesiastical law hath forfeited his *christendom*.—*Id., Ductor Dubitantium*, ii. 306. (Ord MS.)

[The *-dom* in *Christen-dom* is the *dom* in *Domesday Book*, *doom*, and *deem* = judgement, jurisdiction.

From *jurisdiction* we get the area over which it spreads. Hence, the geographical import given to the word *christendom* is the one which alone is etymologically accurate.]

Christening. verbal abs. Ceremony of receiving the person christened as a member of the Christian church by the imposition of a *Christian* name; attendant festivities.

The queen was with great solemnity crowned at Westminster, about two years after the marriage; like an old *christening*, that had staid long for god-fathers.—*Bacon*.

We shall insert the causes, why the account of *christenings* hath been neglected more than that of burials.—*Grant, Observations on the Bills of Mortality*.

The day of the *christening* being come, the house was filled with gossips.—*Arbuthnot and Pope*.

Used *adjectivally*.

My thoughts no *christening* dinners crost,
No children cry'd for butter'd toast.

T. Warton, Progress of Discontent.

Christian. s. [Lat. *Christianus*.] Professor of the religion of Christ.

The disciples were called *Christians* first in Antioch.—*Acts*, xi. 26.

We *Christians* have certainly the best and the holiest, the wisest and most reasonable religion in the world.—*Archbishop Tillotson*.

Christian. adj. Professing the religion of Christ.

I'll not be made a soft and dull-ey'd fool,
To shake the head, relent, and sigh, and yield
To *christian* intercessors.

Shakespeare, Merchant of Venice, iii. 3.

In the Church of England the people were never admitted to the choice of a bishop from its first becoming *Christian* to this very day; and therefore to take it from the clergy, in whom it always was by permission of princes, and to interest the people in it, is to recede a traditionibus majorum, from the religion of our forefathers, and to innovate in a high proportion.—*Jeremy Taylor, Episcopacy asserted*, § 46—48. (Ord MS.)

In the following extract the adjective, as in *letters-patent*, *heirs-general*, instead of preceding, comes after the substantive.

In briefly recounting the various species of ecclesiastical courts, or, as they are often styled, *Courts Christian*, I shall begin with the lowest.—*Sir W. Blackstone, Commentaries on the Laws of England*.

Christianism. s. Imperfect, approximate, colourable, outward, or affected Christianity; Christianity without its essentials.

That I may not seem, rather forcibly, to break out

here out of Platonism into *Christianism*.—*Dr. H. More, Song of the Soul*, pref.

Herein, the worst of kings, professing *Christianism*, have by far exceeded him.—*Milton, Eiconoclast*, ch. i.

To believe antichristianity *Christianism*, and Christianity antichristian.—*Chillingworth, Religion of Protestants a safe Way to Salvation*, pref.

[The *-ism* in this word is the Greek *-ισμ-ος*, a termination which implies a verb ending in *-ίζ-ειν*: e.g. *Μηδίζειν* = become, or take the character of, a Mede; *Μηδισμός* = Median character so taken: *Φιλιππίζειν* = become a partisan of Philip; *Φιλιππισμός* = partisanship so denoted.

As words of this kind imply, in the adoption of one character, some abandonment of an earlier one, they carry with them a certain amount of disparagement. This explains the definition; it being held that Christianity is a word which should never be treated as even an approximate synonym for Christianity. The distinctness or prominence of this sense of disparagement varies with the base; sometimes giving an evidently contemptuous term, sometimes one in which the disparagement is almost evanescent.

Though of Greek origin, the elements *ize* and *ism* attach themselves to bases other than Greek: indeed they did so, in some instances, during the classical period of the Latin.

Like the compounds of *fio*, i.e. the verbs ending in *fy* (see *Calcify*), though originally neuter, the element *-ize* is largely used in an active sense.

It may be laid down as a general rule that the sense of disparagement is less in the Verb than in the Substantive, and less in the Neuter verb than in the Active: indeed in the latter it may wholly disappear; the notion conveyed by the Neuter, of either loss of original character or incomplete adoption of a new one (a notion suggesting a *want* of power) being superseded in the Active by that of an effect produced, or an end attained; this implying an *exertion* of power.]

Christianity. s. Christian religion.

God doth will that couples, which are married, both infidels, if either party be converted into *Christianity*, this should not make separation.—*Hooker*.

Every one who lives in the habitual practice of any voluntary sin, cuts himself off from *Christianity*.—*Addison*.

Christianization. s. Act of rendering anything Christian.

Already there was born to the imperial house that still greater reformer [Peter the Great], who in the next generation was to carry out more than all that Nikon in his highest dreams could have anticipated, if not for the *Christianization*, at least for the civilization, of the clergy and people of Russia.—*Stanley, Lectures on the Eastern Church*, lect. xi.

Christianize. v. a. Make Christian; convert to Christianity. See *Christianism*.

Good dispositions and natural graces, more ready to be advanced by impressions from above, and *christianized* unto pieties.—*Sir T. Browne, Christian Morals*, ii. 12.

Till this excellent piece of philosophy be, as Clements saith of the Pagan school, *τελευτησάντων* *ἐκ* *Χριστοῦ*, baptized by that baptist, *christianized* by the addition of repentance.—*Hammond, Sermons*, iv. To *christianize* them [the *Psalmists*], as Dr. Watts has done, would, I presume, deviate too far from the present practice of our establishment.—*Mason, Essay on Church Music*, p. 194.

The principles of Platonick philosophy, as it is now *christianized*.—*Dryden*.

Christianize. v. n. Approach, imitate, affect, or adopt (but not entirely), the character of a Christian.

As neuters, both this verb and its participial adjective are comparatively rare. Such expressions, however, as 'the Pagans began to *christianize*,' and '*christianizing* philosophers,' illustrate their import.

Christianizing. *part. adj.*

1. From *v. n.* Approaching the character of a Christian.
2. From *v. a.* Encouraging the adoption of the Christian character.

It is impossible to follow out to their utmost extent, or to appreciate too highly, the ennobling, liberalising, humanising, *Christianizing* effects of church architecture during the middle ages.—*Milman, History of Latin Christianity*, b. xv. ch. viii.

Christianlike. *adj.* Like a Christian.

Although the duke was enemy to him,
Yet he, most *christianlike*, laments his death.

Shakespeare, Henry VI. Part II. act. 2.
In the managing of quarrels you may see he is wise; for either he avoids them with great discretion, or undertakes them with a most *christianlike* fear.—*Id., Much Ado about Nothing*, ii. 3.

Christianly. *adj.* Christianlike.

To inbreed in us this generous and *christianly* reverence one of another.—*Milton, Reason of Church Government*, b. ii.

To do well and say nothing is *christianly*; to say well, and do nothing, is pharisaical.—*Bishop Henshaw, Daily Thoughts*.

Christianly. *adv.* Like a Christian; as becomes one who holds the Christian faith.

That they may see their children *christianly* and virtuously brought up.—*Book of Common Prayer, Form of Solemnization of Matrimony*.

Those deep and retired thoughts, which, with every man *christianly* instructed, ought to be most frequent of God, and of his miraculous ways and works amongst men.—*Milton, Of Reformation in England*, b. i.

Christianness. *s.* [the *n* doubled in sound as well as in spelling.] Attribute suggested by Christian; profession of Christianity; Christian character of anything. *Rare*.

It is very irregular and unreasonable to measure any action by a rule that belongs not to it, to try the exactness of the circle by the square, which should be done by the compass; and in like manner to judge the *christianness* of an action by the law of natural reason, which can only be judged by its conformity with the law of Christ, superior to that of nature.—*Hammond, Of Conscience*, § 26.

Christianography. *s.* [Gr. *γράφω* = write, describe.] General description of the nations and sects professing Christianity: (in the extract it is the title of a work, and so far a *proper* rather than a *common* name).

In my *Christianography* you may see divers liturgies.—*Pagitt, Heresiography*, p. 64.

Christless. *adj.* Without the spirit of Christ.

And a million horrible echoes brake
From the red-ribbed hollow behind the wood,
And thundered up into heaven the *Christless* code
That must have life for a blow.

Tennyson, Maud, xxii. 1.

Christmas. *s.* [Christ and *mas* in the ecclesiastical sense of the word.]

1. Day on which the nativity of our blessed Saviour is celebrated by a particular service of the church.

Canons were made by several councils to oblige men to receive the Holy Communion three times a year at least, viz. at Christmas, Easter, and Whitsuntide.—*Wheatley, Rational Illustration of the Book of Common Prayer*.

2. Season of Christmas; festivity relating to it; twelve days succeeding Christmas-day, i.e. from Christmas-eve to Twelfth night.

At Christmas I no more desire a rose,
Than wish a snow in May's new-fangled shows;
But like of each thing, that in season grows.

Shakespeare, Love's Labour's Lost, i. 1.
The festivity of Christmas was observed much after the same manner, ceremonies, and solemnities, as in Italy.—*E. Browne, Travels in Europe*, p. 152: 1685.

Used *adjectively*, or as the *first element* in a compound.

Here was a consent,

(Knowing beforehand of our merriment)

To dash it like a *Christmas* comedy.

Shakespeare, Love's Labour's Lost, v. 2.
Is not a commonly a *Christmas* gambol or a tumbling trick?—*Id., Taming of the Shrew*, induction, ii.

Christmas-box. *s.* Box in which little presents are collected at Christmas; present itself.

When time comes round, a *Christmas-box* they bear,
And one day makes them rich for all the year.

Gay, Trivia.

[That *box* has the ordinary meaning of the word in this compound is clear; the allusions to it as such, in our older literature, being numerous. We know, too, that it was at one time a box of a peculiar kind, being made of earthenware. See *Nares* by H. and W. in voce.]

Nevertheless the fact of *Yule* being the old word for *Christmas*, and the fact of the equivalents in certain parts of the Continent to the Christmas morris-dancers of England being at the present moment named *Julebok* (the word *bok* having a meaning allied to *bog* or *bogy*, and denoting men in fantastic disguises), a compound which exactly translates *Christmas-bok* (*buck*), suggest the doctrine that the formation, though with a different sense, may be older than the system of Christmas begging, and that one element in its vocabulary may, with a change of meaning, have been transferred from Paganism.]

Christmas-rose. *s.* [two words rather than a compound.] Name of a garden plant which flowers late in December: (not a rose but a ranunculaceous plant, *Helleborus niger*).

Christmas-rose and cyclamen being curious early flowering perennials, if of low growth, may be planted in warm borders and pots.—*Abercrombie, Gardener's Journal*, p. 193.

Christology. *s.* [Χριστός = Christ, λόγος = discourse.] Department in Theology, which deals especially with the personality and attributes of Christ; discourse or treatise concerning Christ.

The word '*Christology*' a reviewer has lately characterised as a monstrous importation from Germany. I should quite agree with him that English theology does not need, and can do excellently well without it; yet it is not this absolute novelty; for in the preface to the works of that great Arminian divine of the seventeenth century, Thomas Jackson, written by Benjamin Oley, his friend and pupil, the following passage occurs: 'The reader will find in this author an eminent excellence in that part of divinity which I make bold to call *Christology*, in displaying the great mystery of godliness, God the Son manifested in human flesh.'—*Archbishop Trench, Lectures on the Study of Words*, lect. v.

Chromate. *s.* Salt in which the acid is the chromic, generally that in which the oxide of iron is the base. See *Chrome*.

The only ore of this metal, which occurs in sufficient abundance for the purposes of art, is the octohedral chrome-ore, commonly called *chromate* of iron; though it is rather a compound of the oxides of chromium and iron. The fracture of the mineral is uneven; its lustre imperfect metallic; its colour between iron black and brownish black, and its streak brown. . . . It is infusible before the blow-pipe; but acts upon the magnetic needle, after having been exposed to the reducing smoky flame. It is entirely soluble in borax, at a high blow-pipe heat, and imparts to it a beautiful green colour.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chromatic. *s.* [from the feminine of *χρωματικός*, the word *τίχνη* = art being understood.] In *Painting*. Colouring. *Rare*.

I am now come, though with the admission of many likenesses, to the third part of painting, which is called the *chromatic*, or colouring. Expression, and all that belongs to the word, is that in a poem which colouring is in a picture.—*Dryden, Translation of Dufresnoy's Art of Painting*.

This is simply the translation of the word *chromaticē* in the original. Mason, who translated the same work, and Reynolds, who wrote the notes to it, use the word *Colouring* exclusively.

Chromatic. *adj.* [Gr. *χρωματικός* = relating to, belonging to, or consisting of, the *χρώμα* = skin, complexion, colour; as the base of the forthcoming series of derivatives, limited to the last sense.]

In *Music*. Applied to one out of the three kinds (genera) of ancient melody; the other two being the Diatonic and Enharmonic.

In modern music, it generally qualifies the words *scale* and *modulation*; with the former denoting a succession of ascending or descending *semitones*, with the latter a succession of descending ones only.

Those harsh *chromatick* jars

Of sin that all our musick mars.

Milton, Ode at a Solemn Musick, MS. reading.

It was observed he never touched his lyre in such a truly *chromatick* and enharmonick manner.—

Arbutnot and Pope.

Musick is not designed to please only *chromatick* ears, but all that are capable of distinguishing harsh from disagreeable notes.—*Addison, Spectator*, no. 29.

In Optics. See *extract*.

In the refracting telescopes . . . the different refrangibility of the different coloured rays presents an obstacle to the extension of their power beyond very moderate limits. The focus of a lens being shorter as its refractive index is greater, it follows, that one and the same lens refracts violet rays to a focus nearer to its surface than red. . . . If the paper be held in the focus for mean rays, or between the vertices of the red and violet cones, these will then form a distinct image, being collected in a point: but the extreme, and all the other intermediate rays, will be diffused over circles of sensible magnitude, and form coloured borders, rendering the image indistinct and hazy. This deviation of the several coloured rays from one focus is called *chromatic* aberration.—*Encyclopædia Metropolitana, Light*.

Chromatical. *adj.* Same as *Chromatic*.

Why among sundry kinds of music that which is called *chromatical* delighteth, enlargeth, and joyeth the heart, whereas the harmonical contracteth and draweth it in, making it sad and clumbersome.—*Holland, Plutarch*, p. 1022. (Rich.)

Chromatic. *s.* [*chromatic* in the plural number and the neuter gender, i.e. *χρωματικά*.]

The key to the difference between these two terms is as follows:

(1.) In the form in *-ic*, singular and feminine, the word supposed to be understood is, in accordance with the practice of the Greek language, *τίχνη*. See *Chromatic*.

(2.) In the form in *-ics*, plural and neuter, we understand the word *βιβλία* = books or treatises; most of which are in reality, or are supposed to be, works of Aristotle's.

Each form has been so far extended beyond the actual Greek use, or the range of Aristotle's writings, as to be little more than an etymological fiction. The difference, however, indicated gives us a clue to the difference of form.]

In Optics. Division of the subject which treats of colours.

The science which examines and explains the various properties of the colours of light and of natural bodies, and which forms a principal branch of optics, has been properly denominated *chromatics*, from the Greek word *χρώμα*, which signifies colour.—*Rees, Cyclopædia, Colour*.

We shall . . . occupy our limited space with the more interesting departments of *chromatics*, physical optics, the double refraction and polarisation of light, &c.—*Encyclopædia Britannica, Optics*.

Chromatometer. *s.* [Gr. *χρώμα* + *μέτρον* = measure.] Scale for measuring colour.

But this difficulty was removed by a curious discovery of Wollaston and Fraunhofer; who found that there are, in the solar spectrum, certain fine black lines which occupy a definite place in the series of colours, and can be observed with perfect precision. We have now no uncertainty as to what coloured light we are speaking of, when we describe it as that part of the spectrum in which Fraunhofer's line c or D occurs. And thus, by this discovery, the prismatic spectrum of sunlight became, for certain purposes, an exact *chromatometer*.—*Whewell, History of Scientific Ideas*, i. 341.

Chrome. *s.* English form of chromium; used, however, with greater latitude, so as to signify minerals in general in which chrome is the chief element; i.e. certain *Chromates*.

There is another application of *chrome* which merits some notice here; that of its green oxide to dyeing and painting on porcelain.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Chrome-yellow. s. See extract.

Chromate of lead, the *chrome-yellow* of the painter, is a rich pigment of various shades from deep orange to the palest canary yellow.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Chromium. s. [Gr. χρῶμα = colour, on account of the beautiful reds and yellows of some of its ores. The *-um* belongs to the language of Chemistry, and indicates its metallic character.] Metal so called.

Discovered in the year 1797 by Vauquelin in a beautiful red mineral, the native dichromate of lead. It has since been detected in the mineral called chromate of iron, a compound of the oxides of chromium and iron.—*Turner, Elements of Chemistry, in voce.*

Chronic. adj. [Gr. χρονικός = relating to, consisting in, χρόνος = time.] Taking time for operation or action; slow.

Chiefly used in *Medicine*, in opposition to *Acute*: though it is only in extreme or distant instances that the contrast is strongly marked. When applied to subjects not strictly medical, as in such expressions as 'this condition' or 'state of things became chronic,' it has a bad sense; our attention being fixed not so much upon the difference of intensity which, taken by itself, makes a chronic disease milder than an acute one, as upon the unfavourable character of its permanence.

Acute and chronic inflammation. . . . What do they mean? Is acute inflammation different from chronic in kind? No, they differ only in degree. . . . Now in respect to intensity and duration, there are innumerable shades of difference in different cases of inflammation. . . . We feel no uncertainty about those cases which occupy the two degrees of the scale; but with regard to those which lie in the middle we are often at a loss. To meet this difficulty some pathologists have invented a third epithet, viz. sub-acute, intending to designate thereby cases which hold an equivocal rank, which are neither decidedly acute nor plainly chronic.—*Watson, Lectures on the Principles and Practice of Physic, lect. viii.*

Chronical. adj. Chronic: (which is now the common form).

A *chronical* distemper is of length; as dropsies, asthmas, and the like.—*Quincy.*

It was a principle among the ancients that acute diseases are from heaven and *chronical* ones from ourselves.—*Johnson, Rambler, no. 85. (Rich.)*

Chronicle. s.

1. *Annal*, or account of events in order of time.

No more yet of this;
For 'tis a *chronicle* of day by day,
Not a relation for a breakfast.

Shakespeare, Tempest, v. 1.

History.

You lean too confidently on those Irish *chronicles*, which are most fabulous and forged.—*Spenser, View of the State of Ireland.*

If from the field I should return once more,
I and my sword will earn our *chronicle*.

Shakespeare, Antony and Cleopatra, iii. 11.

I give up to historians the generals and heroes which crowd their annals, together with those which you are to produce for the British *chronicle*.—*Dryden.*

The difference between the *Chronicle* and the *History* is clear and distinct in extreme cases only. In a bare record of events in the order of succession we have the *chronicle* in its typical form, which a little colouring, some representation of character, and a few philosophic reflections convert into a *history*; whilst a *history* with these elements at a minimum is little more than a *chronicle*.

A *Chronicle* in which events are recorded as they happen, so that each entry is cotemporary with its event, is a *Register*. Where there is neither cotemporary record, nor clue to any original evidence, we have the fabulous or unhistorical *Chronicle*, a species of composition to which the term can scarcely be applied with strict propriety. Yet it is common with the older writers; e.g. *Spenser* and *Raleigh*, as in the extracts. With these, however, there was

a vague and partial belief in the historical authenticity of some portion, at least, of what they so denominated. The extract from *Craik* tells us to what class of works the term best applied; and, of these, many were called *Chronica*, some *Gesta*, and some *Historia*. For further remarks see *Chronographer*.

Chronicle. v. a. Record in chronicle or history.

This to rehearse, should rather be to *chronicle* times than to search into reformation of abuses in that realm.—*Spenser, View of the State of Ireland.*

O, would the deed were good!

For now the devil, that told me I did well,
Says that this deed is *chronicled* in hell.

Shakespeare, Richard II. v. 6.

Love is your master; for he masters you:

And he that is so yoked by a fool,
Methinks, should not be *chronicled* for wise.

Id., Two Gentlemen of Verona, i. 1.
I shall be the jest of the town; nay, in two days I expect to be *chronicled* in ditty.—*Congreve.*

Chronicles. s. Writer of chronicles.

Here gathering *chroniclers*, and by them stand
Giddy fantastic poets of each land.

A historian, then, as so understood, may, in the first place, be looked upon as a *chronicler* and recorder of contemporary events, of which he is either a direct and personal witness, or of which he collects the evidence himself from original witnesses.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion, ch. v.*

I do herein rely upon these bards, or Irish *chroniclers*.—*Spenser, View of the State of Ireland.*

Statesmen, men of business, men of war, must begin to relate the affairs of states, the adventures and events of war. For the perfect *chronicle* we must await Villehardouin, Joinville, Froissart. Villani is more than a *chronicler*; he is approaching to the historian.—*Milman, History of Latin Christianity, b. xiv, ch. vi.*

By habitual intercourse with all dealers in political wares, from the chiefs of parties and their more refined coteries to the providers of daily discussion for the public and the *chroniclers* of parliamentary speeches, he trained himself to a facility of speaking, absolutely essential to all but first-rate genius, and all but necessary even to that.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Sheridan.*

The earliest of our English *chroniclers* or annalists, properly so-called, who wrote after the Norman conquest is held to be *Florence of Worcester*, whose work, entitled *Chronicon ex Chronicis*, was printed in 4to at London in 1692. . . . It extends from the Creation to the year 1152, in which the author died, and there is printed along with it a continuation by another writer to the year 1141. It is, for the greater part, a transcript from the notices of English affairs contained in the General History or Chronology which bears the name of *Marianus Scotus*. . . . The principal value of *Florence's* performance in fact consists of its serving as a key to the [Anglo-Saxon] *Chronicle*. . . . [William of] Malmesbury . . . stands next in order of time after *Bede* in the series of our historical writers properly so-called, as distinguished from mere compilers and diarists. . . . It [Geoffrey of Monmouth's work] professes to be a translation of a Welsh *Chronicle*. . . . His Latin is much more agreeable than that of the generality of monkish *chroniclers* of his time. . . . [The work of Henry of Huntingdon] is a more ambitious attempt than had been made by such mere annalists as the Saxon *chroniclers* on one side, and such compilers as *Florence of Worcester* and *Simeon of Durham* on the other. . . . *Hoveden* takes up the narrative at the year 732, where the history of *Beda* . . . ends, and brings it down to 1202. . . . *Hoveden* is, of all our old *chroniclers*, the most matter-of-fact man.—*Craik, History of English Literature, i. 79-83.*

Chronique. s. [Fr.] *Chronicle*. *Obsolete* though the closer form, the Latin (Greek) being *chronicon*.

The best *chronique* that can be now compiled of their late changes, must for the most part be collected from some aged grandsire's memory; a frail foundation to support an historical credit.—*L. Addison, Description of West Barbary, p. 74.*

Chronogram. s. [Gr. χρόνος = time, γράμμα = writing.] Inscription including the date of any action, sometimes definitely, sometimes in the way of an anagram (of which see an example under next entry).

The Spaniards took it [Breda] again, as by inscriptions and *chronograms* are to be seen in divers places.—*E. Browne, Travels in Europe, p. 105: 1586.*

He may apply his mind to heraldry, antiquity;—make epithalamiums, &c., anagrams, *chronograms*, acrosticks upon his friends' names.—*Burton, Anatomy of Melancholy, p. 282.*

Chronogrammatical. adj. Belonging to a chronogram.

'Gloria lausque Deo, sæCLor VM in sæc Vla sunt.' A *chronogrammatical* verse, which includes not only this year 1660, but numerical letters enough to reach above a thousand years further, until the year 2867.—*Hovell.*

Chronogrammatically. adv. In the manner of a *Chronogram*.

These elegies and epitaphs are printed in several formes, some like pillars, some circular, some *chronogrammatically*.—*Wood, Athenæ Oxonienses, ii. 111. (Ord MS.)*

Chronogrammatist. s. Writer of *chronograms*.

There are foreign universities, where, as you praise a man in England for being an excellent philosopher or poet, it is an ordinary character to be a great *chronogrammatist*.—*Addison, Dialogues on the Usefulness of ancient Medals.*

Chronographer. s. *Chronologist*.

The common printed *chronicle* . . . is indeed but an epitome, or deflection, made by Robert of Lorraine, and the numerous rest of our monkish and succeeding *chronographers*.—*Selden, On Drayton's Polyolbion, pref.*

Though the distinction between words in *-ography* and *-ology* is rarely so clear as in *Geography* and *Geology*, it is always worth recognizing; the general fact being that the former applies to works wherein the description on record is pure and simple, the latter to those wherein criticism or philosophy is superadded. If so, *Chronography* is scarcely an obsolete synonym for *Chronology*. Nor, when in use, was it considered as such; indeed, at that time, *Chronology* in its present sense, was in its infancy. It was more nearly equivalent to *Chronicle*, as exemplified in the extract from *Craik* given under that entry; the result of a series of *chronographers* being a *Chronography*, a word which, doubtless, is to be found, but one for which the editor is not prepared with an instance.

Chronologer. s. *Chronologist*.

This publication [his *chronology*], bearing the name of the immortal Newton, though highly built upon by subsequent *chronologers*, is so unspeakably inferior to that great man's other works, that I am almost unwilling to believe its authenticity; and can hardly be persuaded he ever would have published it himself.—*W. Richardson, On the Language and Manners of the East, i. 1.*

Chronologic. adj. Denoting periods of time.

The *chronologic* classing of those histories which my most sanguine wishes went to.—*Pownall, Treatise on the Study of Antiquities, p. 127.*

Chronological. adj. Relating to *chronology*.

Thus much touching the *chronological* account of some times and things past, without confining myself to the exactness of years.—*Sir M. Hale, Origin of Mankind.*

Chronologically. adv. In a *chronological* manner; according to the laws or rules of *chronology*; according to the exact series of time.

Follow them politically, *chronologically*, and geographically.—*Lord Chesterfield.*

Chronologist. s. One who studies or explains time; one who ranges past events according to the order of time.

According to these *chronologists*, the prophecy of the Rabin that the world should last but six thousand years, has been long disproved.—*Sir T. Browne, Vulgar Errors.*

All that learned noise and dust of the *chronologist* is wholly to be avoided.—*Locke, Thoughts concerning Education.*

Chronology. s. Science of computing and adjusting periods of time, and referring each event to its proper year; study of dates.

And the measure of the year not being so perfectly known to the ancients, rendered it very difficult for them to transmit a true *chronology* to succeeding ages.—*Holder, Discourse concerning Time.*

Where I allude to the customs of the Greeks, I believe I may be justified by the strictest *chronology*; though a poet is not obliged to the rules that confine an historian.—*Prior.*

Chronometer. s. [Gr. μέτρον = measure.] 1. Instrument furnishing a more exact mea-

sure of time than that given by ordinary clocks and watches, the effects of change of temperature being particularly guarded against: (used chiefly at sea and in observatories.)

According to observation made with a pendulum chronometer, a bullet, at its first discharge, flies five hundred and ten yards in five half seconds.—*Desham*.

In general chronometers are much larger than common watches, and are hung in gimbals in boxes, six or eight inches square, but there are also many pocket chronometers. . . . The balance and hairspring are the principal agents in regulating the rate of going in a common watch. . . . This spring . . . is subject to expansions and contractions under different degrees of heat or cold, which of course affect the rate of speed of the machine. It is the method of correcting this inaccuracy which marks the difference between the watch and the chronometer.—*Encyclopædia Metropolitana*, in voce.

2. In Music. See extract.

An instrument under the . . . name *chronometer* is also used by musicians for the accurate measurement of time. Two sorts have been invented for different purposes. The first supplies the motion of the conductor, and regularly beats time. . . . The second is used by tuners of instruments to measure the velocity of beats.—*Encyclopædia Metropolitana*, in voce.

Chrysalis. s. [Gr. χρυσός, from the golden, or rather auburn, colour of some of them. The plural form is generally avoided in writing; it being doubtful how far the word is naturalized, and therefore whether *chrysalises* or *chrysalides* is the truer form. The Latin equivalent is *Aurelia*, of which either plural (*aureliæ* or *aurelias*) is more convenient; besides which we have the derivative *Aurelians*, applied to the collectors of butterflies.]

Same as Pupa, itself a technical, though necessary, name; i.e. insect during the stage between that of a larva or caterpillar, and that of an imago or perfect insect. As a general term, it is applicable to all insects; though for particular groups certain other terms are used.

It is used most generally in speaking of the Lepidoptera, or moths and butterflies; though, as it applies to both the insect and the case or covering, other terms are occasionally more current: e.g. when the covering is easily distinguished from the insect, as in the pupa of the silkworm, we use the word *Cocoon*. Hence, saving some exceptions, the word may be defined as the general term for lepidopterous insects during the stage between that of the larva and the imago. The adjectival construction, as 'in the *chrysalis* stage,' is common.

Courage, St. Simeon! This dull *chrysalis* cracks into shining wings, and hope ere death spreads more and more and more, that God hath now

Sponged and made blank of criminal record all My mortal archives. *Tennyson, St. Simeon Stylites*.
Where it is not, as in the egg or the *chrysalis*, merely the change of a fixed quantity of matter into a new shape, but where, as in the growing plant or animal, we have an incorporation of matter existing outside, there is still a pre-existing external force at the cost of which this incorporation is effected.—*Herbert Spencer, The Correlation and Equivalence of Forces*.

Chrysanthemum. s. [Gr. χρυσός = gold, ἄνθος = flower.] Exotic flower (C. sinense), often and perhaps originally yellow, but now falling into varieties of almost every colour: (the native *chrysanthemum*, the word being used in its botanical sense and as a generic name, are the corn-mari-gold, the oxeye, C. segetum and C. Leucanthemum).

No plant is more easily propagated and cultivated than the *chrysanthemum*. The root may be divided, suckers may be taken off, and cuttings taken at any season of the year or any period of the plant's growth.—*Loudon, Encyclopædia of Gardening*, in voce.

Chrysoberyl. s. [Gr. χρυσός = gold, βήρυλλος, 422

Lat. *beryllus* = beryl.] Aluminous mineral so called.

Chrysoberyl [is] unchanged before the blowpipe. With borax and salt of phosphorus fuses slowly, and with difficulty, into a clear glass. . . . Is not acted upon by acids.—*W. Phillips, Elementary Introduction to Mineralogy*.

Chrysolite. s. [Gr. χρυσός = gold, λίθος = stone, —the termination *-lith* would be better; and in *monolith* it has been adopted: but, on the other hand, *coprolite*, a newer word and one of scientific coinage, is spelt with *-te*.] Precious stone of a dusky green, with a cast of yellow; variety of Olivine.

Such another world,
Of one entire and perfect *chrysolite*,
I'd not have sold her for. *Shakespeare, Othello*, v. 2.
If metal, part seem'd gold, part silver clear:
If stone, carbuncle most, or *chrysolite*.

Milton, Paradise Lost, iii. 595.
The green transparent variety, *chrysolite*, is found in Egypt, Natolia, and the Brazils.—*W. Phillips, Elementary Introduction to Mineralogy, Olivine*.

Chrysophilite. s. [Gr. χρυσός = gold, φιλέω = love.] Lover of gold. *Rhetorical, rare*.

The passion for wealth has worn out much of its grossness in tract of time. Our ancestors certainly conceived of money as able to confer a distinct gratification in itself, not considered simply as a symbol of wealth. The old poets, when they introduce a miser, make him address his gold as his mistress; as something to be seen, felt, and hugged; as capable of satisfying two of the senses at least. The substitution of a thin, unsatisfying medium in the place of the good old tangible metal, has made avarice quite a Platonic affection in comparison with the seeing, touching, and handling pleasures of the old *Chrysophilites*.—*Lamb, Essays of Elia, Characters of dramatic Writers*, Ben Jonson.

Chrysoprase. s. [Gr. χρυσός = gold, πράσινον = leek, from its colour.] Siliceous mineral so called, i.e. variety of Chalcedony.

Chalcedony . . . is called carnelian when of a red, yellow, or brown colour; plasma when dark green; *chrysoprase* when of an apple-green colour, produced by an admixture of one per cent. of oxide of nickel.—*W. Phillips, Elementary Introduction to Mineralogy, Quartz*.

Chrysoprasus. s. Latin form of *Chrysoprase*.

The nintha topaz, the tenth a *chrysoprasus*.—*Revelation*, xxi. 20.

Chub. s. [Zoological Latin, *Cyprinus Cephalus* Linnaeus, *Leuciscus Cephalus* Fleming. Besides *ceph-alus* we find, in ordinary as opposed to scientific Latin, the equivalent term *cap-ito*. From either of these *chub* may be derived. Word for word, the nearest approach to it in the languages of the German family is *hibbs*, a provincial term; and one which, supposing the name to have come from Germany, connects it with *kopf* = head. Another complication is suggested by *kufir*, which Nennich gives as a Tatar name. Could we suppose the word to have come from this, the connection with *head* would be done away with and many difficulties avoided. The Turkish *küfer*, however, is the *Sparus Salpa*.

In favour of the appropriateness of a derivation from *caput* little can be said; the most being that the figure of the chub tolerates, without in the slightest degree requiring, the application of a name derived from the size of its head. Yet the French *chevin* from *chef* has the same origin; and so have the Italian *capitone*, the Spanish *cabezudo*, and the Portuguese *cabeçudo*; not to mention *dickkopf*, *dikkop*, and *hard-kopf* in German and Dutch.

Yarrell, saying nothing about the head, gives a second name, *skelly*.

'The chub . . . is the *skelly* of the rivers of Cumberland, so called on account of the large size of its scales; but not the *skelly* of Ulswater Lake; . . . the chub is the *chevin* of Ulswater Lake, where the gwyniad or fresh-water herring is called the *skelly*, pronounced *skelby*; but the term *skelly* with reference to its scales belongs par excellence to the *chub*, whose scales

are large, opaque, and strong like those of a carp.' (Yarrell, *British Fishes*.)

Upon what is, perhaps, the most natural character of the chub, the wattles of the jaw, the term *mundfisch* (mouthfish) can just be said to exist as a provincial name in Germany.

The common freshwater fish to which a name taken from the head most specially applies is the bullhead or miller's thumb (*Cottus Gobio*); and, as this is the freshwater fish which was first called *capito*, it is the opinion of the editor that the name of the bullhead has been transferred to the chub; the mouth, as a character, being substituted for the head. Confirmatory of this view is the fact that, whilst in our own language miller's thumb is another name for the bullhead, *meunier* in French and *molinero* in Spanish, words meaning *miller*, are given (see Nennich, *Cyprinus Jese*) as synonyms of *chevin* and *cabezudo*. See also Goby and Gudgeon.]

Freshwater fish so called; *chevin*.

Chronologers differ among themselves about most great epochs.—*Holder, Discourse concerning Time*.

The chub is in prime from Midway to Candlemas, but best in winter. He is full of small bones; he eats waterish; not firm, but limp and tasteless; nevertheless, he may be so dressed as to make him very good meat.—*I. Walton, Complete Angler*.

Chubby. adj. Well covered with healthy and florid flesh, especially on the face.

Decidedly, like a *chubby* child in high health, with a whitlow.—*Colman the younger, The Poor Gentleman*, iv. 2.

The captain stood near the man at the wheel, with a nautical air; his wife was near him, and Miss Jemima, a fine *chubby* young lady, of the Dutch tulip style, with a parasol as big as a dandy's umbrella, was gazing on her papa with admiration.—*Hannay, Singleton Fontenoy*, b. ii. ch. 12.

Chubfaced. adj. ? Having a chubby face; ? having a face like a chub.

I never saw a fool lean; the *chub-faced* top
Shines sleek with full-cramm'd fat of happiness.
Marston, Antonio's Revenge.

Chuck. v. a. [see *Crush*.]

1. Call, as a hen calls her young.
Then crowing, clapp'd his wings, th' appointed call.

To chuck his wives together. *Dryden, Fables*.

2. Give a gentle blow under the chin, so as to make the lips strike together.

Come, chuck the infant under the chin, force a smile, and cry, Ah, the boy takes after his mother's relations.—*Congreve*.

Chuck. v. n. Jeer; laugh; chuckle. *Rare*.
But, bold-faced Satyr, strain not over high,
But laugh and chuck at meaner gullery.
Marston, Satires, ii.

Chuck. v. a. Throw anything by a quick and dexterous motion, so that it shall nicely fall in a given place. *Colloquial*.

Chuck. s.

1. Voice of a hen.
He made the *chuck* four or five times, that people use to make to chickens when they call them.—*Sir W. Temple*.

2. Word of endearment: (corrupted from *chicken* or *chick*).

I cannot speak of this. Come, your promise.—
What promise, *chuck*? *Shakespeare, Othello*, iii. 4.

She *chuck'd* when a bawd was char'd.

My dear sir, said Thornton, 'I am very sorry I could not see you to breakfast—a particular engagement prevented me—verbum sap. Mr. Pelham, you take me, I suppose—black eyes, white skin, and such an ankle!' and the fellow rubbed his great hands and *chuckled*.—*Sir E. L. Bulwer, Pelham*, ch. xxiii.

Peter *chuckled* inly at the corporal's displeasure, and continued as in an apologetic tone.—*Id., Eugene Aram*, b. i. ch. xi.

Chuckle. v. a.

1. Call as a hen.

I am not far from the women's apartment, I am sure; and if these birds are within distance, here's that will chuckle 'em together.—*Dryden*.

2. Cocker; fondle.

Your confessor, that parcel of holy guts and garbidge; he must chuckle you, and moan you.—*Dryden, Spanish Friar*.

Chuckling. part. adj. [probably an adverb formed like Darkling and Groveling out of an oblique case, from which an imaginary, hypothetical, or catachrestic verb has been developed. In the following extract it is adverbial:

'And when the Pardoner there espied, he gan to sing,
Double me this burden, *chokeling* in his throat,
For the Tapstere should here of his merry note.'
(Chaucer.)

i.e. in the way of one having something in his throat that he had a struggle to get upwards.]

Inward expression of satisfaction by a suppressed choking approach to a laugh.

'Fore Gad, you are in the right, Mr. Pelham,' replied Thornton, with a loud, coarse, *chuckling* laugh, which, more than a year's conversation could have done, let me into the secrets of his character.—*Sir E. L. Bulwer, Pelham*, b. i. ch. xi.

Chud. v. a. [?] Champ. *Rare*.

Chuet. s. Same as Chewet. *Obsolete*.

As for *chquets*, which are likewise minced meat, instead of butter and fat, it were good to moisten them partly with cream, or almond or pistacho milk.—*Bacon, Natural and Experimental History*.

Chuet. s. [? Fr. *chuet* = owl; ? A.S. *ceo* = chough; ? German, *kibitz*, *kiewit* = peewit.] For meaning see remarks on the following extract.

Rebellion lay in his way, and he found it.—*Peace, chewet, peace!*—*Shakespeare, Henry IV. Part I. v. 1*.
[The term is applied by Prince Henry to Falstaff; hence the notion that it means *chuet* the viand, even *suet* has been entertained. Assuming it, however, to mean a bird, what bird is meant? The *chuet* from the French *chuet* is one of the scarcest of the English owls, the Scops Aldrovandi, or Little Horned Owl, as may be seen from the following extract representing the opinion of two authorities:

'This little tufted owl... is so rare that little has been observed of its habits here [in Great Britain]... In France it is not uncommon, and is said to appear and depart with the swallow. Advancing southward to the shores and islands of the Mediterranean, it is even plentiful; and Mr. W. Spence... has thus recorded its summer habits. "This owl, which in summer is very common in Italy, is remarkable for the constancy and regularity with which it utters its peculiar note or cry. It keeps repeating its plaintive and monotonous cry of 'kew kew' (whence its Florentine name of *chui* pronounced almost exactly like the English letter Q) in the regular intervals of about two seconds the livelong night; and, until one is used to it, nothing can well be more wearisome.'" (Yarrell, *British Birds*).

That *chough* may mean a chattering bird (*daw* or *pie*) has been already suggested. But neither of *chough* nor *ceo* can *chuet* be considered a diminutive.

The editor suggests that the bird meant is the Lapwing, or Peewit, and that it is the most German *kiewit* with which it is the most closely connected as a word.

Another Italian name for this particular species is, according to Nemnich (who also gives *chue*) *civino*; the brown owl being the *civet* and the French *chouette*. Altogether the word is used with considerable latitude; the true *chuet*, however, is Scops Aldrovandi, and, as it is an owl that screeches, the true *screechowl* also. The English screechowl is properly a *strich-owl*, i.e. *Strix Ula*. See *Screechowl*.]

Chuff. s. [see Coof.] Coarse, fat-headed, blunt clown.

Hang ye, gorbellied knaves, are you undone?—No ye fat *chuffs*, I would your store were here.—*Shakespeare, Henry IV. Part I. ii. 2*.

A less generous *chuff* than this in the fable would have hugged his bags to the last.—*Sir E. L. Es-trange*.

She gave me a crown not later than Monday fourteen days to drink Church and King. I warrant the *chuff*, her husband, drinks nought but healths to calves' head and conventicle in small beer.—*Sala, The Ship-Chandler*.

Chuffy. adv. Surlyly.

John answered *chuffily*.—*Richardson, Clarissa*.

Chúffy. adj. Blunt; surly.

Church. s. [A.S. *cyric*, *cyrice*, *cyrce*, from Gr. *κυριακός*, from *κύριος* = Lord.—note the purely Greek origin of this word, as contrasted with the Greco-Latin *ecclesia*.]

1. Collective body of Christians, usually termed the Catholic Church.

The church being a supernatural society, doth differ from natural societies in this; that the persons unto whom we associate ourselves in the one, are men, simply considered as men; but they to whom we be joined in the other, are God, angels, and holy men.—*Hooker*.

2. Body of Christians adhering to one particular opinion or form of worship.

The church is a religious assembly, or the large fair building where they meet; and sometimes the same word means a synod of bishops, or of presbyters; and in some places it is the pope and a general council.—*Watts, Logic*.

3. Place which Christians consecrate to the worship of God.

It comprehends the whole church, viz. the nave or body of the church, together with the chancel, which is even included under the word church.—*Ayliffe, Parergon Juris Canonici*.

That churches were consecrated unto none but the Lord only, the very general name chiefly doth sufficiently show: church doth signify no other thing than the Lord's house.—*Hooker*.

Though you unty the winds, and let them fight
Against the churches. *Shakespeare, Macbeth*, iv. 1.

4. Ecclesiastical authority or power, in contradistinction to the civil power of the state.

Lest I should grow tedious about small matters at a time when such great and weighty concerns are under consideration in church and state, I will come to a conclusion.—*Sir G. Wheeler, Account of the Churches of the primitive Christians*, p. 128.

It was the ancient usage of the church of England for women to come veiled, who came to be *churched*.—*Wheatley, Rational Illustration of the Book of Common Prayer*.

For the church-ale, two young men of the parish are yearly chosen to be wardens, who make collection among the parishioners of what provision it pleaseth them to bestow.—*Carew*.

The church-wardens or quest-men, and their assistants, shall suffer no plays, feasts, banquets, suppers, church-ales, drinkings, temporal courts, or leets, lay injuries, musters, or any other profane usage, to be kept in the church, chapel, or churchyard.—*Ecclesiastical Constitutions and Canons*, § 88.

Church-bell. s. Bell for a church.

I reached the White Lion, and began my inquiries amidst the ringing of bells, which distracted me, but of which I subsequently found myself the unconscious cause. Remember, I don't mean house-

bells, for the White Lion boasts no such luxury—I mean the church-bells, which were set going in their merriest peals to do me honour, for which, in the sequel, I found one pound one shilling set down in the bill under the head of 'ringers'; but a little éclat is worth paying for, if one have but the money.—*Theodore Hook, Gilbert Gurney*, vol. ii. ch. ii.

Toll ye the church-bell sad and slow.

Tennyson, The Death of the old Year.

Church-bench. s. Seat in the porch of a church.

Let us go sit here upon the church-bench till two, and then all to bed.—*Shakespeare, Much Ado about Nothing*, iii. 3.

Church-burial. s. Burial according to the rites of the Church.

The bishop has the care of seeing that all Christians, after their deaths, be not denied church-burial according to the usage and custom of the place.—*Ayliffe, Parergon Juris Canonici*.

Church-clock. s. Clock for a church.

With the accent on the first member.

'Now, Matthew,' said I, 'let us match
This water's pleasant tune
With some old Border-song or catch
That fits this April noon:
Or of the church-clock and the chimes
Sing here, beneath the shade,
That half-mad thing of witty rhymes
Which you last April made.'
Wordsworth.

With the accent on the second member.

And ere we came to Leonard's Rock,
He sang those witty rhymes
About the crazy old church-clock
And the bewildered chimes.
Wordsworth.

Church-founder. s. One who founds, builds, or endows a church.

I shall not here enter into the religious account of church lands.—*Sir H. Yelverton, Preface to Bishop Morton's Episcopacy asserted*.

Church-membership. s. Communion or incorporation with the Church.

Unity in the fundamental articles of faith was always strictly insisted upon as the necessary condition of church-membership; and if any man openly and resolutely opposed those articles, or any of them, he was rejected as a deserter of the common faith, and treated as an alien.—*Waterland, Discourse of Fundamentals, Works*, viii. 90.

Church-music. s. Music adapted for use in churches and cathedrals.

It was anciently customary for men and women of the first quality, ecclesiastics, and others, who were lovers of church-music, to be admitted into this corporation [of parish-clerks].—*T. Warton, History of English Poetry*, ii. 396.

Church-service. s.

1. Religious service performed in churches; liturgy.

A statute was fabricated in the year 1699 by which the saying of mass (a church-service in the Latin tongue, not exactly the same as our liturgy, and containing no offence whatsoever against the laws or against good morals) was forged into a crime, punishable with perpetual imprisonment.—*Burke, Speech at Bristol*, Sept. 1780.

2. Book of Common Prayer, with the addition of the Sunday and Proper Lessons.

Church-warden. s. Parochial officer who acts as warden, or guardian, of the church, and as representative of the parish.

There should likewise church-wardens of the gravest men in the parish, be appointed, as they be here in England.—*Spenser, View of the State of Ireland*.

Our church-wardens
Feast on the silver, and give us the farthings. *Gay*.
And feeding high and living soft,
Grew plump and able-bodied;
Until the grave churchwarden doff'd,
The parson smirked and nodded.

Tennyson, The Goose.

Churchdom. s. [see Christendom.] Domain, institution, government, or authority of a Church.

Churchgoer. s. Regular attendant at church.

And yet, such as the advantage of external show,

CHURCHGOING? CHUR

and such the value of appearances, that being only a regular church-goer gives the hypocritical sinner a tenfold advantage in society over the infinitely more innocent individual who is not so constant in his attendance on divine service, but whose heart is perhaps more often communing with his God.—*Theodore Hook, Gilbert Gurney, vol. ii. ch. iv.*

Churchgoing. *adj.* Calling to church; appealing to churchgoers.

But the sound of a churchgoing bell
These rocks and these valleys ne'er heard;
Never sighed at the sound of a knell,
Or smiled when a Sabbath appeared. *Cotey.*

Churching. *verbal abs.* Act of performing the office appointed by the Church for the thanksgiving of women after childbirth.

The absurdity, which some would introduce, of stifling their acknowledgements in private houses, and in giving thanks for their recovery and enlargement in no other place than that of their confinement and restraint, is a practice inconsistent with the very name of the office, which is called the churching of women, and consequently implies a ridiculous solecism of being churchied at home.—*Wheatley, Rational Illustration of the Book of Common Prayer.*

Churchlike. *adj.* Befitting, or after the manner of, a churchman.

Nor shall proud Lancaster usurp my right,
Nor hold his scepter in his childish fist,
Nor wear the diadem upon his head,
Whose church-like humours fit not for a crown.
Shakespeare, Henry VI. Part II. l. 1.

Churchman. *s.*

But the churchmen fair would kill the church,
As the churches have killed their Christ.
Tennyson, Maud, xxv. 2.

2. Member of the Established Church, as opposed to Dissenters and Separatists.

He was a churchman, but of the most subdued description; as far removed from Oxford as from Rome; and looked not quite unfavourably on the heresies of the two brothers Wesley, and a certain Whitfield, then gaining ground considerably.—*Sala, The Ship-Chandler.*

Churchmanlike, more rarely **Churchmanly.** *adj.* Like a churchman.

This, indeed, could be but the lot of few; and there might in the lower orders be much envy and jealousy of those who rose from their rank to the height of churchmanlike dignity, as well as pride and emulation to vie with their success.—*Milman, History of Latin Christianity, b. xii. ch. l.*

Churchrate. *s.* Rate levied in a parish for the repairs of the church.

Church-rates are not a property: they are of a different nature. They arise out of the right and power which every parish has, like a free republic, to tax itself and to impose political duties on its own inhabitants.—*Lord R. Montagu, The Four Experiments in Church and State, p. 86.*

Churchship. *s.* Institution of the Church.

The Jews were his own also by right of churchship, as selected and inclosed by God, from amidst all other nations, to be the seat of his worship, and the great conservatory of all the sacred oracles, and means of salvation.—*South, Sermon on John i. 11.*

Churchwork. *s.* Expression applied to work carried on slowly.

Churchyard. *s.* Ground attached to a

CHUR

church, and commonly used as a place of burial though not originally intended for that purpose.

I am almost afraid to stand alone
Here in the churchyard, yet I will adventure.
Shakespeare, Romeo and Juliet, v. 3.

In churchyards, where they bury much, the earth will consume the crops in far shorter time than other earth will.—*Bacon.*

As to the original of burial places, many writers have observed that, at the first erection of churches, no part of the adjacent ground [churchyard] was allotted for the interment of the dead; but some place for this purpose was appointed at a further distance. This practice continued until the time of Gregory the Great, when the monks and priests secured leave, for their greater ease and profit, that a liberty of sepulture might be in churches or places adjoining to them.—*Hook, Church Dictionary.*

With the accent on the second syllable.

No place so sacred from such fops is barr'd;
Nor is Paul's church more safe than Paul's churchyard. *Pope.*

I do find, Mr. Speaker, that when kingdoms and states are entered into terms and resolutions of hostility, one against the other, yet they are many times restrained from their attempts by four impediments.

The third, when they have conceived an apprehension of the difficulty and churlishness of the enterprise, and that it is not prepared to their hand.—*Bacon, Speech in Parliament, 39 Eliz.*

Churn. *v. n.* Perform the act of churning.

When he regained his liberty, he stood alone in the world, a dishonoured man, more hated by the Whigs than any Tory, and by the Tories than any Whig, and reduced to such poverty that he talked of retiring to the country, living like a farmer, and putting his countless income to the dairy to churn and to make cheeses.—*Macaulay, History of England, ch. xxii.*

Chylaceous. *adj.* Belonging to chyle; consisting of chyle.

This powerful ferment, mingling with the parts, The leaven'd mass to milky chyle converts. *Sir E. Blackmore.*

The chyle cannot pass through the smallest vessels.—*Arbuthnot.*

I will notice first some Greek immigrations. . . . I will now pass on to the Latin, dealing with all as such, whose terminations are such, and Greek though they may be, have come to us through the Latin. Chylus is frequent in Bacon ('Mists, smoke, vapours, chylus in the stomach.'—*Natural History, cent. ix. § 837.*), and, if the examples of chyle in our dictionaries are the earliest, preceded it by at least half a century. Jackson uses abyssus; Baxter and Henry More archiva; Worthington diatriba; Jeremy Taylor expansum; Fuller interstitium; Chillingworth intervalla; Henry More, machina; Culverwell, phitrum; Burton, spectrum. Mummy, not a Latin word, but coming to us through the low Latin, appears for some time as mummia, still wearing its Latin dress.—*Archbishop Trench, On some Deficiencies in our English Dictionaries, pp. 26–28.* (See also extract under Chyme.)

Chylifaction. *s.* [Lat. *factus* = made, participle of *facio* = make.] Act or process of making chyle in the body.

Chyliferous. *adj.* [*Lat. fero* = bear.] Chyle-bearing; lacteal vessels by which the food is conveyed from the intestines to the blood.

Purges clear and empty the lower part of the *chyliferous* tubes.—*Cheyne, Essay on Regimen*, p. 6. (Ord MS.)

Chylification. *s.* Conversion of food into chyle.

Nor will we affirm that iron is indigested in the stomach of the ostrich; but we suspect this effect to proceed not from any liquid reduction, or tendency to *chylification*, by the power of natural heat.—*Sir T. Browne, Vulgar Errors.*

The want of nutrition and *chylification*.—*Cheyne, Philosophical Conjectures*, disc. i. (Ord MS.)

Chylifactory. *adj.* Reducing chyme to chyle.

We should rather rely upon a *chylifactory* menstruum, or digestive preparation drawn from species or individuals, whose stomachs peculiarly dissolve lapideous bodies.—*Sir T. Browne, Vulgar Errors.*

Chylopoietic. *adj.* [*χολοποιετικός* = having the power of making, from *ποιεω* = make.] Having the power, or function, of forming chyle: (the common term, though *physiological* rather than general).

According to the force of the *chylopoietick* organs, more or less chyle may be extracted from the same food.—*Arbuthnot.*

The organ so denominated is found, in most osseous fishes, in the form of an elongated bladder, tensely filled by air, extending along the back of the abdomen, between the kidneys and the *chylopoietic* viscera, and sometimes beneath the caudal vertebrae to near the end of the tail.—*Owen, Anatomy of Vertebrates.*

Chylous. *adj.* Consisting of chyle; partaking of chyle.

Milk is the *chylous* part of an animal, already prepared.—*Arbuthnot.*

Sometimes urine is voided which appears to contain chyle. It looks white and milky, and stiffens as it cools into a tremulous jelly like blanc manger, and takes the shape of the vessel into which it was passed. . . . Of this rare disease I have not met a single instance. . . . Mr. Thomas informs me that during a residence of ten years in Barbadoes he saw at least a dozen well-marked examples of *chylous* urine in negroes.—*Watson, Lectures on the Principles and Practice of Physic*, lect. viii.

Chyme. *s.* [*Gr. χυμος* = juice.] In *Physiology*. Semifluid matter which passes from the stomach into the duodenum, and yields the chyle by admixture with the biliary secretion; digested aliment as it is in the stomach and upper part of the duodenum.

The animal fluids and other substances are, in fact, undergoing a constant series of changes. Food becomes *chyme*, and *chyme* becomes *chyle*; *chyle* is poured into the blood; from the blood secretions take place, as the bile; the bile is poured into the digestive canal, and a portion of the matter previously introduced is rejected out of the system.—*Whewell, History of Scientific Ideas*, ii. 206.

Chyme may give as many derivatives as *chyle*. The only common one, however, is *Chymification*.

Chymical, Chymist, &c. See Chemical, Chemist, &c.

Chymification. *s.* Conversion of the alimentary matters introduced into the stomach (ingesta) into chyme.

Cíbol. *s.* Same as Chibbol.

Ciboules, or scallions, are a kind of degenerate onions.—*Mortimer.*

Cicála. *s.* [*Italian.*] Tree-cricket. See Barmcricket. (As the import of this last term seems to be misunderstood, and as the insect under notice is often mentioned in poetry, the present word is useful.)

At eve a dry *cicála* sung. *Tennyson, Mariana in the South.*

CICE

Cicatrice. *s.* [*Lat. cicatrix.*] *Rare.*

Dr. Croone remarked, that the chicken might be seen formed in the *cicatricula* of the egg, by the help of the microscope.—*Proceedings of the Royal Society*, Nov. 8, 1677. (Ord MS.)

The *cicatricula*, which is the part where the animal first begins to show signs of life, is not unlike a vetch, or a lentil, lying on one side of the yolk, and within its membrane.—*Goldsmith, History of the Earth and Animated Nature*, i. 308. (Ord MS.)

Cicatrix. *s.* [*Lat. cicatrix*; hence the accent should be on the second syllable; but in Surgery, where the term is common, it is generally placed on the first, and, if rightly, the word must be considered as naturalized, like *orator* and *senator*, which are in the same predicament.] Mark left after the healing of a wound or ulcer.

The central part of the diseased spot is converted into a substance resembling cartilage; and the appearance it presents is called a *cicatrix*; and really it deserves that name.—*Watson, Lectures on the Principles and Practice of Physic*, lect. vi.

Cicatrization. *s.*

1. Formation of a cicatrix.

A vein bursted or corroded in the lungs, is looked upon to be for the most part incurable, because of the motion and coughing of the lungs tearing the gap wider, and hindering the conglutination and *cicatrization* of the vein.—*Harvey.*

2. Skinning over of a wound or sore in the process of healing.

The first stage of healing or the discharge of matter is called digestion; the second, or the filling up with flesh, incarnation; and the last, or skinning over, *cicatrization*.—*Sharp, Surgery.*

The apothecary, or chirurgeon, giveth, with a cruel bill, the lately *cicatrized* wound a new gash.—*Moral State of England*, p. 54: 1670.

Cicely. *s.* [pronounced as a dissyllable, and probably considered by the few who use it, especially when preceded by the adjective *sweet*, to be the proper name of a young woman applied to a plant. It is in reality a modification of the word *seseli*, and immediately of Latin or Greek origin, but remotely belonging to some unknown language.]

Indigenous plant, so called: (according to Gerard one of the chevris; but the true *Seseli* is the *Seseli* (Athamanta) Libanotis, for which the English term is said to be Mountain Stone-parsley. It is nearly extinct as a native plant; the editor writing this with, probably, one of the last specimens, gathered in 1840 from one of the last localities, before him. Sweet *Cicely* is the *Myrrhis odorata*, also a scarce plant.)

The smell of sweet *cicely* attracts bees; and the insides of empty hives are often rubbed with it before placing them over newly cast swarms, to induce them to enter.—*London, Encyclopedia of Gardening*, § 4723.

Cicerone. *s.* pl. *ciceroni*. [*Italian.*—see last extract.] Guide.

One of the greatest vexations a curious person experiences in travelling through Spain, is the scarcity, the non-existence, of tolerable *ciceroni*; those you meet with are generally coblers, who throw a brown cloak over their ragged apparel, and conduct you to a church or two, where they cannot give you the least satisfactory information concerning antiquities or curiosities.—*Swinnburne, Travels through Spain*, let. 37.

I must own to you it surprised me to see my *cicerone* so well acquainted with the busts and statues of all the great people of antiquity.—*Addison, Dia-*

CILI. {CHYLIFACTIVE CILIA

logues on the Usefulness of ancient Medals, dial. I. (Ord MS.)

An army of virtuous, medalists, *ciceroni*, Royal Society men, schools, universities, even florists, free-thinkers, and free-masons, will encompass me with fury.—*Pope, To Mr. Bethell-Ruffhead*, p. 299. (Ord MS.)

He was disappointed—rather amazed; but Madame Colonna having sent for him to introduce her to some of the scenes and details of Eton life, his vexation was soon absorbed in the pride of acting in the face of his companions as the cavalier of a beautiful lady, and becoming the *cicerone* of the most brilliant party that had attended Montem.—*Disraeli the younger, Coningsby*, b. i. ch. ii.

How little the modern Italians live in the spirit of their ancient worthies, or reverence the greatest among them, we may argue from the fact that they have been content to take the name of one among their noblest, and degrade it so far that every glib and loquacious hireling who shows strangers about their picture-galleries, palaces, and ruins, is termed by them a *cicerone*, or a *Giepo*.—*Archbishop Trench, Lectures on the Study of Words*, lect. iii.

Cicurate. *v. a.* [*Lat. cicuratus*, part. of *cicuro* = tame.] Tame; reclaim from wildness; make tame and tractable. *Rare.*

Poisons may yet retain some portions of their natures; yet are so refracted, *cicurate*, and subdued, as not to make good their destructive malignities.—*Sir T. Browne, Vulgar Errors.*

Cicuration. *s.* Act of taming or reclaiming from wildness. *Rare.*

This holds not only in domestic and mansuete birds; for then it might be the effect of *cicuration* or institution; but in the wild.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Cicute. *s.* [*Lat. cicuta.*] Hemlock: (for which it is merely the Latin name in an English form).

This sweetened Socrates his *cicute*, and made him a cheerful martyr for philosophy.—*Culverwell, White Stone*, p. 162. (Ord MS.)

Cider. *s.* [*Gr. σίκερα*, from the Syriac or Hebrew.—the word is, at least, as old as the German translation of Tatian's Gospel Harmony, where we find

Inti uin noh cidiri trinitit.
And wine nor cider drinketh.]

1. Strong liquor. *Obsolete.*

He schal not drinke wyn ne sydyr.—*Wycliffe, St. Luke*, i. 15.

We had also drink, wholesome and good wine of the grape, a kind of *cider* made of a fruit of that country: a wonderful pleasing and refreshing drink.—*Bacon.*

Worcester, the queen of the *cider* land, had but eight thousand [inhabitants].—*Macaulay, History of England*, ch. lii.

Ciderist. *s.* Maker of cider. *Rare.*

Cília. *s.* [*Lat. pl.*] In *Anatomy*. Microscopic vibratile appendages on the mucous, serous, and cutaneous surfaces, by which motion is communicated to the surrounding fluids.

The terms vibratory motion and *ciliary* motion have been employed to express the appearance produced by the moving *cilia*; the latter is here preferred, but it is used to express the whole phenomenon, as well as the mere motion of the *cilia*.—*Dr. Sharpe, in Todd's Cyclopaedia of Anatomy and Physiology.*

Ciliary. *adj.* [Lat. *ciliaris*.]

1. [from *cilium* = eyelash, eyelid, and also the second element in super-*cilium* = eyebrow and lower part of the forehead; its derivatives being inaccurately extended to several other parts connected with the eye; in the following extracts to parts within the eyeball.] Consisting of fibrous or hairlike elements; arranged like hairs or fringe.

a. Applied to certain processes at the junction of the choroid and the crystalline lens.

The ciliary processes, or rather the ligaments, observed in the inside of the sclerotic tunics of the eye, do serve instead of a muscle, by the contraction, to alter the figure of the eye.—*Ray, Wisdom of God manifested in the Works of the Creation*.

b. Applied to a small muscle by which the form of the lens of the eye is adjusted to the difference of distance between the eye and the object seen.

The single eye has two properties which jointly serve the purpose of indicating the distance of an object from the eye. The one is a property of the retina; the other of the muscles of the eyeball, and of the ciliary muscle in particular. . . . Of the muscles of the eye, the ciliary muscle plays the most important part in the determination of distance. By its contraction the crystalline lens is brought slightly nearer to the cornea.—*Ingley, Introduction to Metaphysics*, pt. i. b. i. §§ 12-13.

2. [from *cilia*.] Consisting of Cilia, q. v.

Ciliated. *adj.* [from *cilia*, rather than *cilium*: see above.] Furnished with cilia.

In the ciliated polygastria conjugation has been observed to take place in the genus *Actinophrys*, i.e. two individuals of *A. Sol* have been observed to unite, coalesce, and become one. The same has been recorded of species of *Epistylis* and of *Vorticella*.—*Owen, Lectures on Comparative Anatomy*.

Ciliculous. *adj.* [Lat. *cilicium* = haircloth.] Made of hair. *Rare*.

A garment of camel's hair; that is, made of some texture of that hair, a coarse garment, a ciliculous or sackcloth habit, suitable to the austerity of his life.—*Sir T. Browne, Vulgar Errors*.

Cinchona. *s.* [see extract.] Febrifuge bark obtained from certain trees of the genus *Cinchona*.

The precise period and manner of the discovery of the therapeutic power of *cinchona* are enveloped in mystery. . . . The statement of Condamine that the Countess of Cinchon, wife of the Viceroy of Peru, brought some bark to Europe on her return from South America in 1639, is not improbable; and from this circumstance it acquired the name of the *Cinchona* bark, and the countess's powder.—*Pereira, Elements of Materia Medica and Therapeutics*: 1606.

Cinchonism. *s.* In *Medicine*. Disturbed condition of the body brought about by over-doses of cinchona or quinine.

Cincture. *s.* [Lat. *cinctura*, from *cingo* = gird.]

1. Something worn either as a girdle, or a part of dress fastened by a girdle round the body; girdling vest in general.

Now happy he whose cloak and cincture
Hold out this tempest.

I should make very forges of my cheeks,
That would to cinders burn up modesty,
Did I but speak thy deeds!

Shakespeare, Othello, iv. 2.

There is in smith's cinders, by some adhesion of iron, sometimes to be found a magnetical operation.—*Sir T. Browne, Vulgar Errors*.

So snow on Aetna does unmelted lie,
Whose rolling flames and scatter'd cinders fly.

Waller.

If from adown the hopeful chops
The fat upon a cinder drops,
Twisting smoke it turns the flame.

Swift.

Cinque-pace. *s.* Dance to a movement characterised by five beats.

Cinquefoil [is] an ornamental foliation or feathering used in the arches of the lights and tracery of windows, panellings, &c.; also applied to circles formed by projecting points or cusps so arranged that the interval between them resembles five leaves. It is remarkable that in the French styles of Gothic architecture *cinquefoil* feathering is very rarely used.—*Glossary of Architecture*.

Cion. *s.* Same as Scion.

The *cion* over-rueth the stock; and the stock is but passive, and giveth alimant, but no motion to the graft.—*Bacon*.

Cipher. *s.* [Fr. *chifre*.]

1. In *Arithmetic*. The symbol 0. See extract.

The *cipher* of itself implies a privation of value; but when disposed with other characters on the left of it, in the common arithmetick, it serves to augment each of their values by ten; and in decimal arithmetick, to lessen the value of each figure to the right of it, in the same proportion.—*Chambers*.

Also Colonel the Duke de Choiseul, nephew of Choiseul the great, of Choiseul the now deceased; he and Engineer Goguet are passing and repassing between Metz and the Tuileries: and letters go in cipher,—one of them, a most important one, hard to decipher; Fersen having *ciphered* it in haste.—*Carlyle, French Revolution*, pt. ii. b. iv. ch. iii.

2. Designate; characterize; depict.

The face of either cipher'd either's heart.

Circinate. adj. [Lat. *circinatus*, from *circinus* = a bishop's crosier.] In Botany. Term applied to the growth of certain plants (especially the ferns in respect to their veneration, or unfolding of the fronds) when the parts before expansion are crosier-shaped.

6. In Logic. Deceptive form of argument in which the only proof of one proposition is the other, i.e. the one which is itself supposed to be proved.

Circler. s. Same as Cyclic poet: (of which, as a word of Greek origin, it is meant for an Anglo-Latin equivalent. Cycle, however, and Circle, though the one translates the other in Greek and Latin, are by no means synonymous in English. In the extract, which is a translation of

Nec sic incipies ut scriptor cyclicus olim:
'Fortunam Priami cantabo et nobile bellum.'
the word is misapplied).

Nor so begin, as did that circler late;
'I sing a noble war, and Priam's fate.'

Circling-boy. Combination found in the following passage:

One Val Cutting that helps Jordan to roost, a circling boy.—*B. Jonson, Bartholomew Fair*, iv. 2.

The general import of this is pretty plain; the exact signification less so. In Nares, the editors render it *roaring boy*, the meaning being *roysterer, bully*. For more than this they refer to Gifford's note on the passage; this being to the effect that *circling* may mean either

(1.) Making a ring of bullies round the object of their insults, after the fashion of the Mohawks of a later period. Or,

(2.) Giving the lie in so indirect a manner as to do it with impunity. In favour of this latter meaning a reference is made to

—How! to take it?—
Yes, in oblique he'll shew you, or in circle;
But never in diameter.—*(Alchemist*, iii. 2.)

The editor thinks that, considering the writer who supplies the instance, the word is more likely to have a classical than an English origin, and that it means *mountain-bank* rather than *bully*. Compare the Latin *circulator*, also *Circumforaneus* and *Circler*; the latter to show that the word was one on which Ben Jonson made experiments.

Circu-, or Circum-.

The important series of words commencing with *circum-* really begins here.

The reader who cares for the points connected with it will scarcely comprehend them without a previous study of what is said concerning a final *m* in composition, under *co-*, *com-*, and *con-*.

Having made himself familiar with these, all that he has to do is to remember that the rules there applicable have no application here. *Circum-*, as a general rule, retains the *m*; the only exception being words in which the second element is *-it-*, as *-it-er* = journey, from *-it-*, the root of *i-re* = go; and even here we have both forms, *circumeo* and *circueo*.

One of the reasons for this difference is that the words in which *circum-* is the first element are two words rather than compounds.

Circuit. s. [Fr. *circuit*; Lat. *circuitus*.]

1. Act of moving round anything.

There are four moons also perpetually rolling round the planet Jupiter, and carried along with him in his periodical circuit round the sun.—*Watts, Improvement of the Mind*.

At length Geryon, having *circuited* the air like a falcon lowering without prey, deposits his burthen and vanishes.—*T. Warton, History of English Poetry*, iii. 246.

Circuiteer, or Circuiter. s. One who goes a circuit.

Both these words being obsolete, and probably rare when used, it is equally difficult to treat them as independent words, and to separate them.

The first was probably pronounced *circuiteer*, i.e. treated as a derivative from *circuit*, like *charioteer* from *chariot*.

The second, so far as it was a word at all, must have been sounded *circuiter* or *circuiter*; of which the most that can be said is that it grew out of the mixture of *circuiter* and *circuitous*.

Like your fellow *circuiter* the sun, you travel the round of the earth, and behold all the iniquities under the heavens.—*Pope*.

Whether the thieves condemned by any *circuiter* corrupt have done more villanies than their judge.—*Whitlock, Manners of the English*, p. 513: 1654.

The struggles by which philosophers attained a right general conception of plane, of *circular*, of elliptical Polarization, were some of the most difficult steps in the modern discoveries of Optics. 5. Perfect; complete. Obsolete.

Your wisdom is not *circular*.

That wonderful and mysterious man, the author of the Court *Circular*, drops in with his budget at the newspaper office every night. . . . Oh! that Court *Circular*! Once more I exclaim Down with the Court *Circular*—that engine and propagator of Snobbishness. In Posen, too, an editor has at least the satisfaction of knowing that he cannot be punished for attacking the government until his attack has been fairly issued and *circulated*.—*Edwards, Polish Captivity*, vol. ii. ch. iv.

Circulating. part. adj.

1. Returning into itself.

But we have already seen that in metaphysical speculations in which matter and form are opposed, the word form is used in a far more extensive sense than that which denotes a relation of space. It may indeed designate any change which matter can undergo; and we may very allowably say that food and blood are the same matter under different forms. Hence if we assert that life is a constant form of *circulating* matter, we express Cuvier's notion in a mode free from the false suggestions which 'Vortex' conveys.—*Whewell, History of Scientific Ideas*, ii. 209.

2. In Finance. Current; constituting currency.

Circulating medium is more comprehensive than the term money, as it is the method of exchanges, or purchases, and sales, whether it be gold or silver coin, or any other article.—*Wharton, Law Lexicon*.

Nerve-force is no longer generated, if oxygen be withheld, or the blood prevented from *circulating*; by the fact that when the chemical transformation is diminished, as during sleep with its slow respiration and *circulation*, there is a diminution in the quantity of nerve-force; in the fact that an excessive expenditure of nerve-force involves excessive respiration and *circulation*, and excessive waste of tissue.—*Herbert Spencer, Data of Biology*, § 21.

2. Series in which the same order is always observed, and things always return to the same state.

He had neither time nor temper for sentimental circumvolutions. He detested the diplomacy of passion: protocols, protracted negotiations, conferences, correspondence, treaties projected, ratified, violated. He had no genius for the tactics of intrigue; your reconnoitring, and marchings, and counter-marchings, sappings and minings, assaults, sometimes surrenders, and sometimes repulses.—*Disraeli the younger, Coningsby, b. vi. ch. ii.*

Cirrhopod, or Cirriped. *s.* [the former is directly from the Greek *κίρρος* = curl, and *πῦς*, *πῶς* = foot, and is contrasted with the latter, which is directly from the Latin *cirrus* = curl and *pes*, *ped-is* = foot, by having *rh* in place of the second *r*, *o* = *i*, and *p* = *ped*.]

In *Zoology*. Animal of the class called *Cirripedia*, of which the acorn-shells (*Balanus*) and the barnacles (*Lepades*) are the chief representatives. See extracts.

Within the memory of many living naturalists, *cirripedes* were universally looked on as belonging to the molluscous kingdom; nor was this surprising, considering the fixed condition of their shells. . . . It is remarkable that this external false appearance overbore, even in the mind of Cuvier, his knowledge of their internal structure, namely, their lateral jaws, articulated appendages, and a regular ganglionic nervous system. . . . Straus was, I believe, the first who, in 1819, maintained that *cirripedes* were most closely allied to Crustacea. But this view was disregarded, until J. Vaughan Thompson's capital discovery, in 1830, of their metamorphoses, since which time *cirripedes* have been almost universally admitted amongst the crustaceans. It is well known that it is hardly possible to give a definition of this great class, which shall include every member of it; nevertheless, even if the mature *cirripede* alone be considered, the following characters, viz. the slight separation of the head and thorax, the latter generally bearing six pairs of appendages, and the being enclosed in a carapace—together with the periodical exuviation of the greater part of the external membranes, would, perhaps, suffice to show that it should be classed amongst Crustacea.—*Darwin, Monograph of the Cirripedia*.

In the following extract each author quotes the other, so that the two orthographies are mixed.

Mr. Darwin, who has given the best account of the female organs in the pedunculated *cirripeds*, writes, &c., &c. . . . Mr. Darwin has shown that the organ, by the secretion of which the *cirripeds* attach themselves to foreign bodies, is a modified part of the ovarian tube. . . . In a few *cirripeds*, e.g. the species of *Cryptophialus*, the changes from the egg to the pupa take place within the sack of the parent. . . . The antennae are the organs by which the young *cirriped* finally anchors itself to the spot where its future adult existence is to be spent. . . . The three terminal segments of the antennae, into which the cement-ducts are prolonged, are retained in an otherwise functionless condition, in the young *cirriped*.

The mouth is formed under that of the pupa, with a large oesophagus round the old oesophagus, leading into the same alimentary canal. The twenty-four extremities of the six pairs of biramous cirri of the young *cirriped* are formed within the twenty-four segments of the six pairs of biramous natatorial legs of the pupa. 'Consequently,' writes Darwin, 'in the *cirriped* and pupa, thus far, part corresponds with part, notwithstanding that new eyes are formed posteriorly to the old eyes, and new acoustic organs in a quite different position from the old ones; but now we come to a most important diversity in the metamorphosis, or rather, to follow Professor Owen, in the metagenesis, of the young *cirripede*.'—*Owen, Lectures on Comparative Anatomy*, lect. xii.

The editor treats these forms as concurrent, holding that the former is the better, but believing that, as the great authorities are against it, the chances of its prevailing are against it also.

That he is no friend to the doctrine of treating words of Greek origin as words introduced through a Latin medium is evident. He must not, however, be supposed to place words like the present in the same category with words of a more exclusive and decided English character. The arguments, for instance, in favour of ascetic being spelled with a *k* are not arguments in favour of words like *Cirrhopod* being spelled *Kirrhopod*. This is because the language of Zoology, like that of Chemistry and other sciences, is not exclusively English. On the contrary, it partakes of the nature of a universal language.

Hence the necessity, in cases like the one before us, of looking to other languages. In favour, then, of the principle of Latinizing Greek words is to be set down the important fact of the chief languages derived from the Latin (the French and Italian, to go no farther) universally doing so. Hence, if a word, on the strength of its scientific character, be common to the French and English, and if this community be an advantage, the practice of *both* the languages must enter into all considerations of its form. This, as before said, puts scientific and non-scientific words in different categories. Secondly, as far as the words in question are concerned, the French, Italian, and English are the only languages that bear upon it. If the habit of the German and Scandinavian languages, the nearest congeners of our own, were decidedly opposed to that of the French and Italian, and if it were their practice to ignore the Latin as a medium, and to treat words of Greek origin as direct introductions from the Greek itself, forming and spelling them accordingly, we in England might consider the practice divided, and make our choice without danger of isolation. But the German and Scandinavian practice is *not* this. As a general rule, the Germans and Scandinavians resort, like the French and Italians, to the classical languages; but not with the view of getting the classical term either literally or verbally. Instead of this, they translate it, so that the equivalent comes out as a complete German or Danish word, rather than as a Greek one. Thus, the German scientific term for the animals under notice is *Rankenfüssen*; the French, *Cirripède*.

In Todd's *Cyclopædia of Anatomy and Physiology* the entry is *Cirrhopoda*, whilst the word used in the text is *Cirriped*.

The exact details of the sound and spelling of *Cirriped* have yet to be settled. The difference as to the final letter, between the two influential authorities quoted in the extracts, shows this.

Cirrhopod is the Greek, *Cirriped* the Latin, form; the former requiring the connecting vowel to be *o*, the latter *i*. That the word, in either shape, is more Greek than Latin is well known. The etymological fiction, however, that words of Greek origin are, as a general rule, supposed to come to us through a Latin medium, the inference therefrom that *k* is to be written, *c*, and the risk, or rather certainty, of the letter so written being sounded as *s*, have already been noticed. See *Cee*.

The objections to the spelling with *e* are: (1.) In the singular number it disguises the quantity of the vowel, suggesting the notion that the *e* in *ped-is* is long, whereas it is short; besides which, the mute *e* is foreign to the Latin language. (2.) It leaves the character of the plural doubtful. Is *Cirripedes* a Latin word of four syllables, or an English word of three? If the latter, the *e* is improperly lengthened. Or is it French?

The question under notice is one out of the many other inconveniences of the fiction just mentioned. To the derivatives from the Greek *πῶς* no one affixes an *-e*, so that *Cirrhopod* gives, plainly and simply, *Cirrhopods*; presuming, of course, the plural form to be English. If not English, it gives *Cirrhopoda*; a word which, whatever else may be said against it, is not, like *Cirripedes*, equivocal, i. e. English or French or Latin, trisyllabic or quadrisyllabic, as the case may be.

The objection to the ending in *-d* is simply the fact of *centipede*, *millipede*, and a few other words, supplying a plausible precedent against it. It would be best, if practicable, to alter these; and, if impracticable, to be inconsistent, rather than be consistent in a theoretical error and a practical inconvenience. But, even in respect to the precedents, it may fairly be said that such important and common words as *quadruped* and *biped* outweigh *centipede* and *millipede*, and probably any others that can be added to them. Nor is this all. The opposing precedents belong to different classes. Phonetically, *centipede* and *millipede* have the last syllable sounded *-ped*; etymologically, they may be considered as having it formed after the French *pède*. Hence, if the rule stand thus,—that direct and undoubted derivatives from the Latin *péd-*, preserving their short sound, are spelled without the *e*,—the form *Cirriped* has not so much as a genuine precedent against it; in other words, besides being convenient, it is unexceptionable.

The Peak, the Pens, the Hundreds, or Land's-end,
I would prefer to Fleet-street, or the Strand.
What place so desert, and so wild is there,
Whose inconveniences one would not bear,
Rather than the alarms of midnight fire,
The fall of houses, knavery of *cits*?

The plots of factions, and the noise of wits?
Oldham, Imitation of Juvenal's third Satire.
Study your race, or the soil of your family will
dwindle into *cits* or squires, or run up into wits or

Barnard, thou art a *cit* with all thy worth:
But Bug and D—, their honours, and so forth.

Pope.
It is not by his liveliness of imagery, his pungency of periods, or his fertility of allusions, that he detains the *cits* of London and the bores of Middlesex. Of style and sentiment they take no cognizance: they admire him for virtues like their own; for contempt of order and violence of outrage; for rage of defamation and audacity of falsehood.—*Johnson, Thoughts on the late Transactions in the Falkland Islands.*

2. Quotation. (Notwithstanding the extent to which *cite* and *quote*, with their derivatives, may be used for one another, they are essentially different; neither are all the significations of the two words interchangeable. View the principles in their own authors, and not in the *citations* of those who would confute them.—*Watts*.

His [Sir V. Gibbs's] legal arguments were often much to be admired. He did not go by steps, and move on from point to point, garnishing each head with two observations, as many *citations*, and twice as many cases; so that the whole argument should be without breath or relief, and each single portion seem as much as any other the pivot upon which the conclusion turned—but he brought out his governing principle roundly and broadly.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Sir V. Gibbs.

Gibbs.

It might be said of him, as he said himself of Sir James Mansfield, that 'he declared the law,' while he argued his cases; and while others left only the impression on the hearer that many authorities had been *cited*, and much reading displayed, his argument penetrated into the mind, and made it assent to his positions, without much regarding the support they found from other quarters.—*Ibid*.

Lodge, Pleasant History of Glaucus, &c.: 1610. I have remarked in the Lectures on Political Economy, that the descriptions some writers give of the *civilization* of mankind, by the spontaneous origin, among tribes of savages, of the various arts of life, one by one, are to be regarded as wholly imaginary. . . . inasmuch as there is no record or tradition of any race of savages having ever civilized themselves without external aid. . . . Abundant as are the traditions (though mostly mixed up with much that is fabulous) of the origin of *civilization* in various nations, all concur in tracing it up to some foreign, or some superhuman, instructor. If ever a nation did emerge, unassisted, from the savage state, all memory of such an event is totally lost. quicker than before; this is called clamouring them.
—*Bishop Warburton.*

Clamourer. *s.* One who makes an outcry or
clamour.

These clamourers, who make the greatest cry, do
not yield the fairest fleece.—*Bishop Gauden, Hiera-
spistes*, p. 468: 1653.

The non-residence therefore of the minister, or
even his neglects of duty, are a mere pretence set
up against paying tithes; and I am afraid that if he
would graciously remit his dues, too many of these
clamourers would readily dispense with his resi-
dence.—*Archbishop Horst, Charge.*

Clearly indicating all the confusion of objects
which has arisen among the clamourers for the six-
inch map (many of whom erroneously think they
will have in it plans of their estates), this very com-
petent authority has shown, that even during the
execution of the six-inch surveys, the surveyors were
at the same time called upon to prepare plans of pa-
rishes and townships in the north of England on the
scale of 2½ inches to the mile; and for sanitary
purposes in towns on a scale of 60 inches or 5 feet,
and even of 10 feet to the mile.—*Sir E. I. Murchison,*
Address, p. 37.

Clamp. *s.* See Clumsy, and extracts.

1. In *Shipbuilding*.

Clamps in ship-building are stakes of plank, in
large ships, on the gun-deck, eight or nine inches
thick, fayed to the sides, to support the ends of the
beams. Clamps, in a ship, are also pieces of timber
applied to a mast or yard, to strengthen it, and pre-
vent the wood from bursting. Clamp is also a
crooked iron plate, fastened to the after end of the
main cap of snows, to secure the try-sail mast.
Clamp also denotes a little piece of wood, in form
of a wheel, used instead of a pulley in a mortice.—
Rees, Cyclopædia, in voce.

2. In *Brickmaking*.

Clamp, in brickmaking, is a large mass of bricks,
generally quadrangular on the plan, and six, seven,
or eight feet high, arranged in the brickfield for
burning, which is effected by flues prepared in
stacking the clamp, and breeze, or clinders laid be-
tween each course of bricks.—*Brando, Dictionary*
of Science, Literature, and Art.

allow seven tons of coals.—*Mortimer, Husbandry.*

Clamp. *v. a.* Fix as, or by, a clamp.

with iron, screwed to the floor, and defended by two
locks besides a heavy staple and padlock—the chest

and in many instances most of their current cash.—
Sala, The Ship-chandler.

Clamping. *verbal abs.* See extract.

Waller of Fairfax; for we have our lineal descents
and clans as well as other families.—*Dryden.*

Without cities in which municipal institutions
had been organised, without Roman laws of pro-
perty and inheritance, without the traditions of an
empire, one and indivisible, the country was and
could be nothing more than a cluster of clans.—
*C. H. Pearson, The early and middle Ages of Eng-
land*, ch. xxx.

Land was the common property of the clan, and
a fresh division was made on the death of every
proprietor.—*Ibid.*

More than a year had elapsed since the massacre
of Glencoe. . . . It is certain, however, that no mo-
tion for investigation was made. The state of the
Gaelic clans was indeed taken into consideration. A
law was passed for the more effectual suppressing of
depredations and outrages beyond the Highland
line. . . . The injured clan, bowed down by fear of
the all-powerful Campbells, and little accustomed to
resort to the constituted authorities of the kingdom
for protection or redress, presented no petition to
the estates.—*Macaulay, History of England*, ch. xix.

2. Body or sect of persons. *Contemptuous.*

Patridge and the rest of his clan may hoot me for
a cheat, if I fail in any single particular.—*Swift.*

Of drums, o'ercame their groans. *Philips.*

I walked on; and as I approached our little church,
the sound of the bell, tolling louder and louder as I
came nearer to it, cut to my very heart's core; for
its hollow clang had to my ear even less of sorrow
in it, than of reproach.—*Theodore Hook, Gilbert*
Gurney, vol. i. ch. vi.

Clang. *v. n.* [*Lat. clango.*] Sound with a

Even Dubois makes a charge, with that cavalry of
his, and the cruelest charge of all: 'there are a great
many killed and wounded.' Not without clangour,
complaint; subsequent criminal trials, and official
persons dying of heartbreak! So, however, with
steel-besom, Rascality is brushed back into its dim
depths, and the streets are swept clear.—*Carlyle, French Revolution*, pt. i. b. iii. ch. ix.

In the following extract the *g* is sound-
ed, i.e. the word is *clang-gour*; in ordinary

The trumpet's loud clangor
Excites us to arms;
With shrill notes of anger,
And mortal alarms. *Dryden.*

small groups, as if they loved society or clanship.—*Pennant, Tour in Scotland*.

Clansman. *s.* Member of the same clan.

The origin of feudalism is as difficult to trace as
the source of the Niger. The relation of chief and
clansman among Barbarians, the oath of Roman
soldiers to the Emperor, the civic responsibility of a
father for his children, transferred to a lord for his
dependents, are all elements in the system which
overspread Europe in the middle ages.—*C. H. Pearson, The early and middle Ages of England*, ch. xxiv.
But menaces were vain. With torments and death
in immediate prospect Mac Callum More thought
far less of himself than of his poor clansmen. 'I
was busy this day,' he wrote from his cell, 'treating
for them, and in some hopes.'—*Macaulay, History of England*, ch. v.

The pamphleteers who recommended the immediate and entire disbanding of the army had an easy task. If they were embarrassed, it was only by the abundance of the matter from which they had to make their selection. On their side were *claptraps* and historical commonplaces without number, the authority of a crowd of illustrious names, all the prejudices, all the traditions, of both the parties in the state.—*Macaulay, History of England*, ch. xxiii.

'Alas!' said I, all one's *clap-traps* in that house must be cited.—*Sir E. L. Bulwer, Pelham*, ch. xli.

In truth, Mr. Sheridan's taste was very far from being chaste, or even moderately correct; he delighted in gaudy figures; . . . he overlaid his thoughts with epigrammatic diction; he 'played to the galleries,' and indulged them, of course, with an endless succession of *clap-traps*.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Sheridan.

Used adjectivally.

Liquors are, many of them, at the first, thick and troubled; as muste, and wort: to know the means of accelerating *clarification*, we must know the causes of *clarification*.—*Bacon, Natural and Experimental History*.

No one who has well studied the history of science can fail to see how important a part of that history is the explication, or, as I might call it, the *clarification* of men's ideas. This, the metaphysical aspect of each of the physical sciences, is very far from being, as some have tried to teach, an aspect which it passes through at an early period of progress, and previously to the stage of positive knowledge. On the contrary, the metaphysical movement is a necessary part of the inductive movement.—*Whewell, Novum Organon renovatum*, preface, p. vii.

Clarified. part. adj. Made clear; purified; enlightened.

The will was then ductile and pliant to all the motions of right reason: it met the dictates of a *clarified* understanding half way.—*South, Sermons*.

The juice flows from the mill through a wooden gutter lined with lead, and, being conducted into the sugar-house, is received in a set of large pans or caldrons called *clarifiers*. Each *clarifier* is hung over a separate fire, the fire being furnished with a damper for checking the combustion or extinguishing it altogether.—*Ure, Dictionary of Arts, Manufactures, and Mines, Sugar*.

The apothecaries *clarify* their syrups by whites of eggs, beaten with the juices which they would *clarify*; which whites of eggs gather all the dregs and grosser parts of the juice to them; and after, the syrup being set on the fire, the whites of eggs themselves harden, and are taken forth.—*Bacon, Natural and Experimental History*.

Certain changes and peculiar phenomena attend the increase of size of the soft and hard roes during these primary processes of generation. The colours of the fishes become more marked and brilliant; the different sexes are often distinguished by peculiar tints; as the male stickleback by his bright red throat, for example. The claspers in the male plagiostomes then acquire their full development and force; the basal glands in those of the rays enlarge.—*Ibid.*

The kingdom of England, instead of so many dioceses, was now [during the great rebellion] divided into a certain number of provinces, made up of representatives from the several classes within their respective boundaries. Every parish had a congregational or parochial presbytery for the affairs of its own circle; those parochial presbyteries were combined into classes, which chose representatives for the provincial assembly, as did the provincial for the national. Thus, the city of London being distributed into twelve classes, each class chose two ministers and four lay-elders, to represent them in a provincial assembly.—*T. Warton, Notes on Milton's Poems*.

One classic drama, and reform the stage.

Byron, English Bards and Scotch Reviewers.

3. Relating to the order and rules of the presbyterian assemblies.

Surely where we put down bishops and put up presbyters, which the most of them have made use of to enrich and exalt themselves, and turn the first heel against their benefactors, we did not think, that one classic fraternity, so obscure and so remote, should involve us and all state-affairs within the censure and jurisdiction of Belfast, upon pretence of overseeing their own charge.—*Milton, Observations on the Articles of Peace between the Earl of Ormond and the Irish*.

Dare ye for this adjure the civil sword

To force our consciences that Christ set free,

And ride us with a classic hierarchy?

CLAS {CLASHING CLASSIFICATION

From this standard the value of the Roman weights and coins are deduced; in the settling of which I have followed Mr. Greaves, who may be justly reckoned a classical author on this subject.—*Arbutnot, Tables of ancient Coins, Weights, and Measures*.

Sometimes I put myself to school to one of those ancients, whom the church hath honored with the name of Fathers; whose volumes I confesse not to open without a secret reverence of their holiness and gravity; sometimes to those later doctors, which want nothing but age to make them classical.—*Bishop Hall, Epistles*, vi. 1. (Ord MS.)

Accordingly, he [Sheridan] brought away from school a very slender provision of classical learning; and his taste, never correct or chaste, was wholly formed by acquaintance with the English poets and dramatists, and perhaps a few of our more ordinary prose-writers.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Sheridan.

The duller portion over whose heads his [Mr. Canning's] lighter missiles flew, were offended with one who spoke so lightly: it was almost personal to them if he jested, and a classical allusion was next thing to an affront.—*Ibid.*, Mr. Canning.

They are generally well versed in classical literature, and often acquainted with mathematical science.—*Ibid.*, Sir V. Gibbs.

2. Classificatory.

Unwilling to give similar classical characters to both of his primary divisions, Csesalpinus has passed over what at first is most striking in the form of trees. . . . For this purpose, though he [Ray] paid particular attention to the fruit, which he thought of primary importance, he judged it expedient sometimes to seek for classical characters from other parts of a plant.—*Rees, Cyclopædia, Classification*.

3. Relating to the class-system (generally ecclesiastical).

We perceive it [presbyterian government] aspiring to be a compulsive power upon all without exception in parochial, classical, and provincial hierarchies.—*Milton, Observations on the Articles of Peace between the Earl of Ormond and the Irish*.

After they have so long contended for their classical ordination, will they at length submit to any episcopal?—*Dryden, Preface to Hind and Panther*.

Mr. Baxter takes great pains to unite the classical and congregational brethren, but claws off the episcopal party as a set of Cassandrian priests.—*Bishop Nicholson, To Mr. Yates*, 1699.

Classicality. s. Classical character; classical knowledge.

This is literally true of a visit which Napoleon, a short time before, had made to the great library, on which occasion even when going up the staircase he was continually asking for the celebrated passage in Josephus where the historian speaks of Christ, and appeared to have no other object for his present visit than thus to make a display of this scrap of classicality which he had just acquired; it seemed quite as if he had learned his question by heart.—*Foreign Quarterly Review*, no. 1.

Classicism. s. Approach to, or affectation of, the classical character. See Christianism.

Catholicism, classicism, sentimentalism, cannibalism: all isms that make up man in France, are rushing and roaring in that gulf.—*Carlyle, French Revolution*, pt. iii. b. v. ch. i.

Classics. s. Greek and Latin literature, as opposed to mathematics or science; writers, authorities, or models, of the first class; types of excellence of any kind.

His [Mr. Fox's] knowledge was confined to the ordinary accomplishments of an English education—intimate acquaintance with the classics; the exquisite taste which that familiarity bestows; and a sufficient knowledge of history.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Fox.

His knowledge, too, was not confined to the study of the classics, though with these he was familiarly conversant; the more severe pursuits of Cambridge had imparted to him some acquaintance with the stricter sciences which have had their home upon the banks of the Granta since Newton made them his abode; and with political philosophy he was more familiar than most Englishmen of his own age.—*Ibid.*, Mr. Pitt.

Classifiable. adj. Capable of Classification.

These changes are classifiable as the original sensations are. As two sensations can be known as like or unlike in kind; so can two changes among them be known as like or unlike in kind.—*J. S. Mill, System of Logic*, i. 295.

Classification. s. Distribution into classes and divisions: (applied most definitely and precisely to the classificatory sciences).

In the classification of the citizens, the great legislators of antiquity made the greatest display of their powers.—*Burke*.

The *classification* of sciences has its chief use in pointing out to us the extent of our powers of arriving at truth, and the analogies which may obtain between those certain and lucid portions of knowledge with which we are here concerned, and those other portions, of a very different interest and evidence. . . . The *classification* of human knowledge will, therefore, have a more peculiar importance when we can include in it the moral, political, and metaphysical, as well as the physical portions of our knowledge. . . . In this, as in any other case, a sound *classification* must be the result, not of any assumed principles imperatively applied to the subject, but of an examination of the objects to be classified;—of an analysis of them into the principles in which they agree and differ. The *classification* of sciences must result from the consideration of their nature and contents. . . . As a good nomenclature presupposes a good system of *classification*, so, on the other hand, a system of *classification* cannot become permanent without a corresponding nomenclature. Cæsalpinus, in the sixteenth century, published an excellent system of arrangement for plants; but this, not being connected with any system of names, was never extensively accepted, and soon fell into oblivion. The business of framing a scientific botanical *classification* was in this way delayed for about a century. In the same manner, Willoughby's *classification* of fishes, though, as Cuvier says, far better than any which preceded it, was never extensively adopted, in consequence of having no nomenclature connected with it.—*Whewell, History of Scientific Ideas.*

There is . . . a *classification* of things, which is inseparable from the fact of giving them general names. . . . On this kind of *classification* we have nothing to add to what has previously been said. The *classification* which requires to be discussed as a separate act of the mind, is altogether different. . . . *Classification*, thus regarded, is a contrivance for the best possible ordering of the ideas of objects in our minds; for causing the ideas to accompany or succeed one another in such a way as shall give us the greatest command over our knowledge already acquired, and lead most directly to the acquisition of more. The general problem of *classification*, in reference to these purposes, may be stated as follows: To provide that things shall be thought of in such groups, and those groups in such an order, as will best conduce to the remembrance and to the ascertainment of their laws. *Classification*, thus considered, differs from *classification* in the wider sense, in having reference to real objects exclusively, and not to all that are imaginable. . . . There is no property of objects which may not be taken, if we please, as the foundation for a *classification* or mental grouping of those objects. . . . But these *classifications*, which are at first recommended by the facility they afford of ascertaining to what class any individual belongs, are seldom much adapted to the ends of that *classification* which is the subject of our present remarks. . . . The ends of scientific *classification* are best answered, when the objects are formed into groups respecting which a greater number of general propositions can be made. . . . A *classification* thus formed is properly scientific or philosophical, and is commonly called a natural, in contradistinction to a technical or artificial, *classification* or arrangement. . . . The same objects, therefore, may admit with propriety of several different *classifications*. Each science or art forms its *classification* of things according to the properties which fall within its special cognizance, or of which it must take account in order to accomplish its peculiar practical ends. A farmer does not divide plants, like a botanist, into dicotyledonous and monocotyledonous, but into useful plants and weeds. A geologist divides fossils, not, like a zoologist, into families corresponding to those of living species, but into fossils of the secondary and of the tertiary periods, above the coal and below the coal, &c. Whales are or are not fish, according to the purpose for which we are considering them. . . . These different *classifications* are all good, for the purposes of their own particular departments of knowledge or practice. . . . Classes formed on this principle may be called, in a more emphatic manner than any others, natural groups.—*J. S. Mill, System of Logic*, b. iv. ch. vii. § 1-2.

Classificatory. adj. Consisting in, or forming the basis of, classification: (Mineralogy, Botany, and Zoology are the sciences pre-eminently so called).

When it was seen that botany derived so great advantages from a systematic improvement of its language, it was natural that other sciences, and especially *classificatory* sciences, should endeavour to follow its example.—*Whewell, History of Scientific Ideas.*

Terms must be constructed and appropriated so as to be fitted to enunciate simply and clearly true general propositions. This aphorism may be considered as the fundamental principle and supreme rule of all scientific terminology. It is asserted by Cuvier, speaking of a particular case. Thus he says of Gmelin, that by placing the lamantin in the genus of mooses, and the siren in the genus of eels, he had rendered every general proposition respecting the organization of those genera impossible. The maxim is true of words appropriated as well as invented,

and applies equally to the mathematical, chemical, and *classificatory* sciences.—*Ibid.*

It ought always to be recollected that though the analytical process carried to the uttermost, and separating groups by observation of differences, is necessary for the purpose of ascertaining the facts upon which botany or any other *classificatory* science is based, it is a judicious synthesis alone, associating individuals by the ties of language, which can enable the human mind to take a comprehensive view of these facts, to deduce from them the principles of the science, or to communicate to others either facts or principles.—*Ibid.*

Classifier. s. One who classifies; one who investigates the principles of classification.

The *classifiers* of the period were chiefly Fructists and Corollists.—*Rees, Cyclopædia, Classification.*

Classify. v. a. Arrange in classes.

To make such an assumption is to renounce, at once, all hope of framing a system which shall be governed by the resemblances of the things *classified*; for how can we possibly know beforehand that fifty-five per cent. of iron shall give a substance its predominant properties, and that forty-five per cent. shall not?—*Whewell, History of Scientific Ideas*, ii. 27.

Classifying. part. adj. Relating to, bearing upon, or capable of being applied to, *Classification*.

Of a very different temper and character was William Smith. No literary cultivation of his youth awoke in him the speculative love of symmetry and system; but a singular clearness and precision of the *classifying* power, which he possessed as a native talent, was exercised and developed by exactly those geological facts among which his philosophical task lay.—*Buckle, History of Civilization in England*, ii. 515.

Classing. verbal abs. Reduction to a class or classes; *classifying*.

But how, it may be asked, does this prove that *classification* presupposes reasoning; as well as reasoning, *classification*? It may be true that the intuition of similarity is their common root. It may be true that our conscious inferences involve acts of *classing*. But it does not, therefore, follow that our conscious acts of *classing* involve inferences.—*J. S. Mill, System of Logic*, i. 174.

Classis. s. [Lat.]

Clause. s. [N.F. clause; Lat. *clausa* = thing enclosed.] Sentence; single part of a discourse; subdivision of a larger sentence; so much of a sentence as is to be construed together; article or particular stipulation.

When the *claw* is present the petal is said to be unguiculate. In some unnaturally deformed flowers the limb is absent, as in the garden variety of *Rosa* called R. Clayed. *adj.* In *Sugar-making*. Purified by means of water percolating through a layer of clay spread over the surface. See *Claying*.

Syrup intended for forming *clayed* sugar must be somewhat more concentrated in the treacle, and run off into a copper cooler, capable of receiving three or four successive skippings. . . . *Clayed* sugars are sorted into different shades of colour according to the part of the cone from which they were cut. The *clayed* sugar of Cuba is called *Havannah sugar*. . . . *Clayed* sugar can only be made from the ripest cane-juice; for that which contains much gluten would be apt to get too much burnt by the ordinary process of boiling, to bear the *claying* operation.—*Ure, Dictionary of Arts, Manufactures, and Mines*, *Sugar*.

Cláying. *verbal abs.* In *Sugar-making*. Operation by which sugar is purified.

The *claying* now begins; which consists in applying to the smoothed surface of the sugar at the base of the cone a plaster of argillaceous earth, or tolerably tenacious loam, in a pasty state. The water diffused among the *clay* escapes from it by slow infiltration, and descending with like slowness through the body of the sugar, carries along with it the residuary viscid syrup, which is more soluble than the granulated particles. Whenever the first magma of *clay* has become dry it is replaced by a second, and this, occasionally, in its turn by a third, whereby the sugar cone gets tolerably white and clean.—*Ure, Dictionary of Arts, Manufactures, and Mines*, *Sugar*.

Claying is seldom had recourse to in the British plantations, on account of the increase of labour and diminution of weight in the produce, for which the improvement in quality yields no adequate compensation. Such, however, was the esteem in which French consumers held *clayed* sugar, that it was prepared in four hundred plantations in St. Domingo alone.—*Ibid.*

Cleanly. *adj.* (pronounced *cleenly*.)

[This is a word wherein the addition of a second element has influenced the sound of the first, a phenomenon so common in language in general as to make its comparative absence in English remarkable. The affix is the syllable *-ly*, pronounced short; which is simply an abbreviation of the word *like*, wherein the vowel is long. Hence, it is safe to infer that when *cleanly* was first used the addition was, not the word *like* in its full form, but the modified and shortened form *-ly*. The next point to remark is, that in the adverb *cleanly* the *-ea-* is sounded long, as in *clean*. The convenience of making a distinction between the two parts of speech may have had something to do with the change and its onesided application. It is more probable, however, that the real reason, for the shortening of the vowel lies in the forms *cleänse*, *cleänser*, and *cleänsing*, wherein the effect of the addition of the consonant *s* has been, as is often the case, to shorten the vowel by which it is preceded. If this be so, *cleanly* must be looked on as a derivative from *clean* as its base, but modified in respect to its form by the influence of *cleänse*, *cleänser*, and *cleänsing*; all of which are very old words, and belonged to our language when it was Anglo-Saxon, as *clænsian*, *clænsere*, *clænsung*.]
